

CSI / SyteLine v10 — Master Training

Reference Guide

Topic-to-document navigation index — use this to find which workbook covers what

How to use this guide: When you have a question during implementation or development work, find the topic below and look up which source document covers it. Then open the corresponding summary PDF (in the same folder as the workbook) for the condensed notes, or open the original workbook for the full step-by-step exercises.

Document Registry — Source Workbooks

Label	Full title	Folder / file
UI-NAV	UI Navigation (Parts 1–4)	02 User Interface Navigation\CSI_v10_...Workbook.pdf • Notes: csi_ui_navigation_notes.md.pdf
CFP	Creating Form Personalizations	03 Creating From Personalizations\CSI_v10_...Workbook.pdf • Notes: csi_form_personalizations_notes.md.pdf
EXT	Extending the Application with Mongoose	04 Extending the Application with Mongoose\CSI_v10_...Workbook.pdf • Notes: csi_extending_mongoose_notes.pdf
RPT	Creating Reports Using Mongoose	05 Creating Reports Using Mongoose\CSI_v10_...Workbook.pdf • Notes: csi_reports_mongoose_notes.pdf
AES	Using the Application Event System	Using The Application Event (workflows)\CSI_Using...Workbook.pdf • Notes: csi_aes_notes.pdf

Topic Index — Organized by Subject Area

Application Structure & Navigation

Topic	Document(s)
Opening and navigating forms	UI-NAV
Form types (Multiview, Query, Grid-only, Report, Utilities)	UI-NAV
Filter-in-place vs. Query forms (Ctrl+Q)	UI-NAV
Form modes: Filter / Refresh / New	UI-NAV
Grid vs. Detail view; splitter bar; Ctrl+1 / Ctrl+2	UI-NAV
Explorer: My Folders, Master Explorer, Public Folders, User Folders	UI-NAV

Topic	Document(s)
Keyboard shortcuts (Ctrl+O, F4, F5, F7/F8, Ctrl+S...)	UI-NAV
Smart Client vs. Web Client differences	UI-NAV
Notes (object notes, class notes, system/user notes, internal/external)	UI-NAV
Printing, output formats, export to Excel	UI-NAV
Workspaces (form groups)	UI-NAV
Activities and Utilities — batch processing, preview/commit vs. process-only	UI-NAV

Form Customization (Design Mode)

Topic	Document(s)
Entering Design Mode; permission levels (5 levels)	CFP, EXT
Scope levels: Vendor / Site / Group / User; resolution order	CFP, EXT
Fonts and themes (Infor vs. Classic)	CFP
Background colors (solid, gradient) and background images	CFP
Component toolbox: Button, CheckBox, Edit, Combo, Grid, NoteBook...	CFP
Adding, aligning, and sizing components; alignment toolbar	CFP
Tab order — setting, rules, color coding	CFP
Read Only, Hidden, Visible When, Enabled When, Required When properties	CFP
Reverting a form to previous scope; System > Help > About This Form	CFP
Copying a form (System > Form > Definition > Copy)	CFP, EXT
Check-in / check-out of form definitions	EXT
FormSync — exporting/importing customizations between environments	CFP, EXT
Extended form vs. copied form — tradeoffs	EXT

IDO, Properties, and Data Architecture

Topic	Document(s)
Three-tier architecture (Client / IDO Runtime / Database)	CFP, EXT
What an IDO is; anatomy (table refs, properties, methods, extension class)	CFP, EXT
Property Classes — creating and using; the inheritance chain	CFP, EXT
Property Class Extensions — UI-level overrides of IDO property behavior	CFP
Component Classes — reusable component attribute bundles	CFP
IDO Property binding on a component	CFP, EXT
Read-Only For Existing Records vs. Read-Only For New Records	CFP
Creating a brand-new IDO + table + form (New Data Maintenance Wizard)	EXT
Extending an existing IDO at Site scope	EXT
User Extended Tables (UETs) — adding columns to existing tables	CFP, EXT
UET workflow: Classes → Fields → Class/Field → Table/Class → Impact Schema	EXT
IDO Methods: Fetch, Non-fetch, GetProperty, SetProperty	EXT
Standard built-in IDO methods: LoadCollection, UpdateCollection, GetPropertyInfo, Invoke	EXT

List Sources, Validators, Strings

Topic	Document(s)
List sources: IDO Collection, IDO Method, Inline, Script	CFP
User-defined types (reusable named lists of values)	CFP
Validators: types (Alphanumeric, DateTime, Inline list, In Collection)	CFP

Topic	Document(s)
Validate Immediately vs. on-save; message display options	CFP
Strings (reusable translated text); naming prefixes s/f/m/t	CFP

Event Handlers (Form-Level)

Topic	Document(s)
Form event handlers vs. Application Event System handlers	CFP, AES
Response types: Collection processing, Method call, Set values, Generate event, Goto form...	CFP
Handler sequence numbers; Ignore Failure parameter	CFP
Built-in system responses always run last	CFP
From Base Form = False — overriding inherited handlers	CFP, EXT
Only When Current Collection Is — scoping a handler to one collection	CFP

Application Event System (AES) — Automation & Workflows

Topic	Document(s)
What the AES is; three components (Event / Handler / Action)	AES
Framework events vs. customer-defined events; Access As identifier	AES
Synchronous vs. asynchronous events and handlers	AES
Suspension — gating a record change on approval; InWorkflow flag	AES
Suspend-validating mode vs. suspend-committing mode	AES
Adjournment and resumption (Prompt, Wait, Sleep action types)	AES
Success, failure, and retry rules; Ignore Failure option	AES

Topic	Document(s)
Transactions with synchronous events; rolling back	AES
Setting up the Infor Framework Event Service	AES
Event global constants — GC(), TGC(); use cases	AES
Event variables and initial states — V(), Event Variable Groups form	AES
Event Triggers — condition/time-based firing; retest intervals	AES
New Workflow Wizard — quick notification setup	AES
Predefined workflow event handlers (50+) — Workflow Event Handler Activation form	AES
Event actions: Notify, Prompt, Fail, Finish, Branch, Set Values, Load IDO Row...	AES
Event action parameter syntax — FUNCTION(value); nesting rules	AES
SUBSTITUTE() and CLIENTSUBSTITUTE() for message bodies	AES
PROPERTYMODIFIED() — detecting changes in IdoOnItemUpdate	AES
Requesting approvals (basic) — Prompt + Fail + Suspend pattern	AES
Multi-level approvals — Branch action; chained Prompt + Set Values blocks	AES
Voting rules: Majority, Plurality, MinimumCount, MinimumPercentage, EarliestResponse...	AES
Quorums — automatic calculation; QUORUM() override	AES
Adding information to a record via a Prompt response (free-form)	AES
Generating events from within a WinStudio form	AES
Setting up external email (SMTP + Users form + send flags)	AES
Tracking: Event Status, Event Handler Status, Event Queue, Suspended Updates	AES

Topic	Document(s)
Restricting handlers: Event Handler form Active checkbox; Session Access As form	AES
Metadata synchronization — Access As ownership; sequencing; FormSync does NOT cover AES	AES
Event Revisions / Handler Revisions — why old metadata runs	AES
Determining IDO names and property names for event handler setup	AES

Reports

Topic	Document(s)
Mongoose reporting architecture overview	RPT
IDO Methods / DataViews — the data supply for reports	RPT
Report Type forms — Form Type = Report	RPT
FlexLayout bands: Report Header, Page Header, Group Header, Detail, Group Footer, Page Footer, Report Footer	RPT
Secondary Collections — child data under parent rows	RPT
Sub-Reports — embedding one report inside another	RPT
Report Criteria forms — collecting parameters before running	RPT
Using standard IDO Collections on reports (no custom DataView needed)	RPT
Output formats: PDF, Excel, CSV, print directly	RPT
Report performance: NOLOCK hints, pre-joining in stored procedure	RPT

Portal Forms — External User Access

Topic	Document(s)
Setting 'Display In Portal' on a form	EXT
Restricting fields visible to portal users	EXT

Topic	Document(s)
IDO-level row filtering for portal security	EXT
Expense Report portal workflow pattern	EXT

Learning Path — Recommended Study Order

Order	Document	Why this order
1st	UI-NAV	Foundation: you must understand how forms, records, and collections work before customizing them.
2nd	CFP	Form customization: Design Mode, components, bindings, validators — needed by every developer.
3rd	AES	Automation: most implementations need notification/approval workflows early. The AES does not require deep developer knowledge to set up basic workflows.
4th	EXT	Extension: building new entities, extending IDOs, portal forms. Requires solid understanding of the first three.
5th	RPT	Reporting: build reports once the data model is stable. Requires understanding of IDOs and stored procedures.

Quick Lookup — 'I need to...' Scenarios

I need to...	See document(s)
Open a form I can't find in the Explorer	UI-NAV — Select Form dialog (Ctrl+O)
Understand why a field is grayed out	UI-NAV (form modes) or CFP (Read Only / Enabled When)
Make a field read-only for existing records	CFP — Read Only For Existing Records property
Add a dropdown to an existing field	CFP — List Sources section
Send an auto-email when a new customer is added	AES — Notify action on IdoPostItemInsert
Require manager approval before a PO is committed	AES — Prompt + Fail + Suspend on IdoOnItemInsert
Add a custom field to the Customer Order form	EXT — UET or IDO extension, then CFP for the form component
Build a new maintenance form for a custom table	EXT — New Data Maintenance Wizard
Create a report showing open POs by vendor	RPT — DataView IDO method + Report Type form

I need to...	See document(s)
Let vendors submit data via browser (no Smart Client)	EXT — Portal forms
Move form customizations from dev to production	CFP/EXT — FormSync (Note: AES and IDO metadata require separate steps)
Find out why an approval notification didn't fire	AES — Event Status form; check that Event Service is running
