About this workbook

Welcome to this Infor Education course! We hope you will find this learning experience enjoyable and instructive. This Training Workbook is designed to support the following forms of learning:

- Classroom instructor-led training
- Virtual instructor-led training
- Self-directed learning

This Training Workbook is not intended for use as a product user guide.

Activity data

You will be asked to complete some practice exercises during this course. Step-by-step instructions are provided in this guide to assist you with completing the exercises. Where necessary, data columns are included for your reference.

Your instructor will provide more information on systems used in class, including server addresses, login IDs, and passwords.

Self-directed learning

If you are taking this course as self-directed learning, there may be instructor-recorded presentations and/or simulations available to assist you.

If instructor-recorded presentations are available, a hyperlink to the recording will be included on the first page of each corresponding Lesson.

If simulations are available, the demos and exercises throughout this Training Workbook will include hyperlinks that allow you to view and/or practice the execution of the demo or exercise in a simulated training environment.

Learning Libraries

Learning Libraries in Infor Campus include learning materials that are available to you online, anytime, anywhere. These materials can supplement instructor-led training, providing you with additional learning resources to support your day-to-day business tasks and activities.

Please note that if you accessed this Training Workbook directly via a Learning Library, you will not have access to the Infor Education Training Environment that is provided with all instructor-led and most self-directed learning course versions, as referenced above. Therefore, you will not be able to practice the exercises in the specific Training Environment for which the exercises in this Training Workbook were written.

Course overview

Estimated time

.25 hours

Learning objectives

Upon completion of this course, you will be able to:

- Describe the elements of the Quote To Cash business process
- Explain the Order Shipping process.
- Discuss the pick, pack, and ship functionality.

Topics

- Course description and agenda

Course description and agenda

This course will instruct how to manage and execute the shipping process in Syteline using order shipping and the pick, pack, and ship process.

Course duration

4 hours

Prerequisite courses

- SyteLine: Navigating the User Interface
- SyteLine: Foundation

Prerequisite knowledge

To optimize your learning experience, Infor recommends that you have the following knowledge prior to attending this course:

- Knowledge of how data is structured and organized
- Ability to navigate the user interface

Audience

- Customer User
- Pre-Sales Consultant
- Business Consultant
- Technical Consultant
- Support
- System Administrator

System requirements

- Infor SyteLine Training Environment

Reference materials

Reference materials are available from the following locations:

- Help menu
- Infor Xtreme®

Course agenda

The agenda below details the contents of this course, including lesson-level learning objectives and supporting objectives.

Lesson	Lesson title	Learning objectives	Estimated Time (Hours)
Course overview		Review course expectations.	.25
1	Quote to Cash	Describe the elements of the Quote To Cash process within the Industry Process Catalog.	.25
2	Sales Order to Shipping	Explain the Order Shipping process: • Describe the steps before order shipping. • List the steps to ship an order • Explain how to create a packing slip	1
3	Pick, Pack, and Ship	Describe the pick, pack, and ship process. • Identify the process flow used in picking a customer order. • Identify the process flow for packing a customer order. • Identify the process flow for shipping a customer order.	2
Course summary		Debrief course.	.5

Appendices

This section contains information that is not part of the instructional content of this course, but provides additional related reference information.

Appendix	Appendix title	Content description
Appendix A	User accounts	This appendix provides a reference for student login credentials.
Appendix B	Check your understanding answers	This appendix provides answers to the check your understanding questions found at the end of each lesson.
Appendix C	Delivery orders	This appendix provides instructions on the use of delivery orders to include creating a delivery order, adding delivery order lines, setting delivery order line sequences, and assigning delivery orders to shipments.

Lesson 1: Using Quote To Cash

Estimated time

.25 hours

Learning objectives

After completing this lesson, you will be able to:

- Describe the elements of the Quote To Cash process within the Industry Process Catalog.

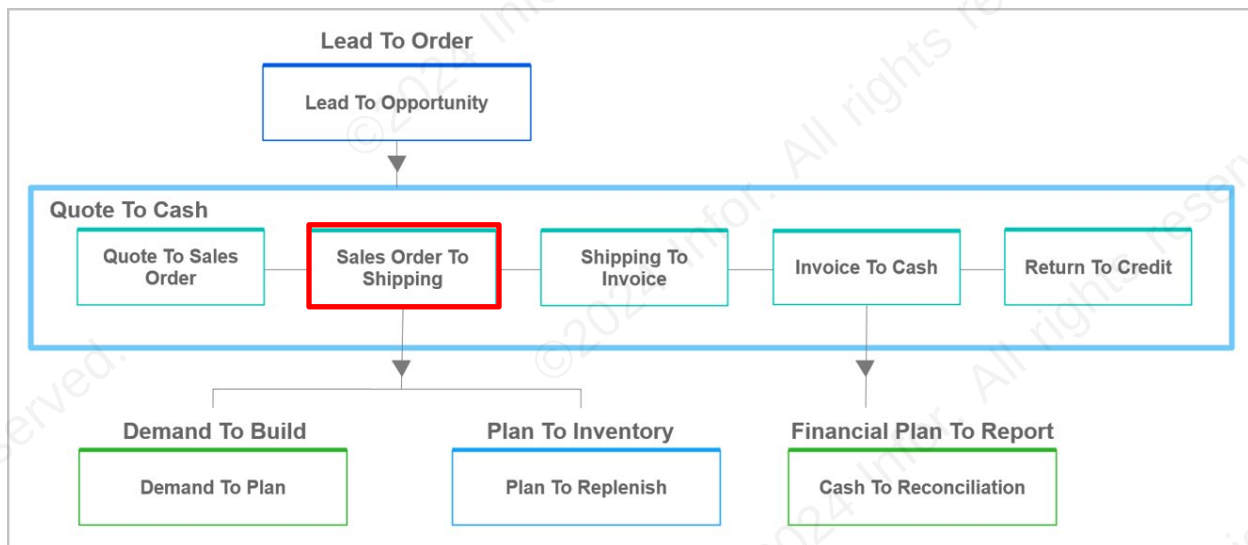

Topics

- Quote To Cash business process overview.

Quote to Cash business process overview

Infor Industry Process Catalog (IPC) for CloudSuite Industrial (SyteLine) is preconfigured content targeted at your organization's industry. It provides a collection of assets including configurations, processes, and test cases, covering your organizations core needs. This content can be used to streamline the implementation process of this CloudSuite, helping you to save time and money and takes the guesswork out of deployment. The result is an affordable solution that can meet today's requirements and potential for tomorrow. It also provides the possibility for a faster ROI and time-to-benefit that is measured in weeks instead of months or years.

In this course we will refer to the IPC as business processes.

The Quote to Cash business process helps organizations manage all their sales activities. This business process encompasses all the activities starting from submitting quotes to customer, winning the order, shipping the items, and finally invoicing and collecting payments.

Following are the sub processes within Quote To Cash:

Quote to Sales Order - Defines the activities involved in managing sales opportunities, tracking opportunity win/loss percentage, sending out estimates to customers and finally converting the approved estimate to sales order.

Sales Order to Shipping- Defines the activities involved in receiving customer PO, creating sales order, sending order acknowledgement, picking the orders to be shipped, packaging and finally shipping the items to the customer

Shipping to Invoice - Defines the activities involved in determining the customers that need to be invoiced, cross verifying with customer shipments, print the invoice and sending it to the customer for payment.

Invoicing to Cash - Defines the activities involved in receiving customer payments, applying them to open invoices and recognizing revenue.

Return to Credit (RMA) -Defines the activities involved in managing customer returns and by providing credits or sending them replacement products.

This course covers the Sales Order to Shipping process.

Lesson 2: Using Sales Order to Shipping

Estimated time

1 hour

Learning objectives

In this lesson, you will be able to explain the order shipping process:

- Describe the steps before order shipping.
- List the steps to ship an order
- Explain how to create a packing slip.

Topics

- Create a pick list
- Ship an order
- Create a packing slip

Shipping Clerk

After customer orders have been created and order lines/releases have been added to the orders, the next step is to fulfill the order by shipping the items.

Shipping an order includes the following:

- Generating a pick list so that ordered items can be located and picked from inventory
- Creating a packing slip for either shipping or pre-shipping
- Packaging the ordered items for shipment
- Processing the shipping transaction

Items

If an item on a customer order exists in the system, it will have a product code, unit of measure, and cost information. The **Items** form is a record of all items purchased, manufactured, and/or sold.

Customer order information

The table below describes fields on the Items form that are relevant to shipping:

Field	Description
Source	The selection from the Source drop-down list identifies whether an item is purchased, manufactured, or transferable between sites. This information is relevant when adding a customer order and creates a cross-reference to either a purchase order or a job order.
Quantity On Hand	The Quantity On Hand field displays the total quantity of the item for all warehouses available for shipping transactions.
Reserved For Customer Orders	The field displays the quantity of the item at all warehouses that is reserved for customer orders.

Create a pick list

Before a customer order can be shipped, it must be picked from inventory. An order pick list helps users identify the items, quantities, and stock locations of the items to be shipped. The Generate Order Pick List utility produces a report that lists all items available to be shipped for a particular order (with a status of Ordered).

Exercise 2.1: Generate an Order Pick List

In this exercise, you will generate a pick list for customer order DC00000307. In future exercises you will ship and unship this order.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. icon
2. Click the **Warehouse** drop-down arrow.
3. Click the **MAIN** list item.
4. Click the **Process** button. The **Order Pick List Report** opens in a new tab.
5. Scroll down to see the pick list for order *DC307*. You will use this order for shipping in the next exercise.
6. Click the **X** on the **Generate Order Pick List** report. A dialog box opens with the message, "Report submitted".
7. Click the **OK** button.
8. Click the **X** on the **Generate Order Pick List** form.

Ship an order

Order Shipping

The Order Shipping form is used to enter shipping transactions and track shipped items by ship date. Before generating a regular invoice for an item or an order, you must ship that item or order.

If the Credit Hold check box is selected on either the Customer Orders or the Customers form, the system does not allow you to ship customer orders.

The Order Shipping form is divided into three sections:

1. The top section of the form is referred to as the filter. It displays order and customer numbers, whether partial or early shipments are permissible, and the status of the order. The Order drop-down list contains only the orders that meet your line status criteria, either Ordered or Filled. For example, if the line Order Status field is showing the default of Ordered then the Order drop-down list only lists orders that have a line item status of Ordered.
2. The middle section lists the customer order line items, stock locations, and if applicable, lot numbers. The quantity available for shipping is displayed. Several buttons can be utilized to add, update, or delete line item information.
3. The bottom section displays specific detailed information regarding each line item, such as, item description, reference, delivery order, delivery order line and quantities available. This section displays tabs for Serial Numbers, Customer Credit Return, and Pieces.

You can apply freight charges to an order from the Order Shipping form by clicking Actions > Edit Freight Charges. You can also add freight and other miscellaneous charges to an order from the Amounts tab on the Customer Orders form.

Shipping approvals

If approvals are required for shipment of the customer order, the "In Process" accounts must be set up first on the following forms:

- Account Receivable Parameters
- Distribution Accounts
- End User Types
- Item Stockroom Locations
- Tax Codes

The Shipped Not Approved Report shows orders where shipment approval is required and orders where the shipped amount does not match the approved amount.

The Order Shipments form is used for orders that require shipment approval.

The following table describes a field and a button on the Order Shipments form which is used for shipping approvals:

Field	Description
Qty to Approve	The Qty to Approve field specifies the quantity of the order to approve. This is entered by the user.
Approval Log	The Approval Log button, when clicked, opens the Order Shipments Approval Log. The Order Shipment Approval Log displays all shipments for the customer order line.

Create a packing slip

Generating packing slips

The packing slip is a shipping document that itemizes and provides item details about the contents of a package. Item details include a description of items and the quantity being shipped.

The user has the option of updating any of the selection criteria and can print packing slips by customer order numbers and line/release numbers, by customer numbers, or by order and due dates. A separate packing slip is printed for each drop ship or ship-to customer for each customer order.

The order packing slip can be printed for shipping or pre-shipping. If you print a pre-shipping packing slip, you cannot print a ship packing slip.

The packing slip prints only line/release items that have been shipped via a shipment transaction. the system tracks the quantity packed for each line/release item. The packing slip only includes line/releases that have more items shipped than packed and prints the difference for each as the Qty To Pack.

Exercise 2.2: Ship customer order and print packing slip

The shipping department has already boxed your order for shipment. Freight charges are \$25.

We need the shipment to be recorded in the system with a shipping transaction.

Don't forget to print the packing slip after shipping the order.

Exercise steps

Part 1: Ship the order

1. Click the **Open** icon on the toolbar.
2. Type *order shipping* in the **Filter** field.
3. Click the **Order Shipping** form list item.
4. Click the **OK** button. The **Order Shipping** form opens.
5. Type *dc307* in the **Order** field. **Note:** this is the order from Exercise 2.1. Also note that this is a blanket order with blanket releases.
6. Press **Tab**.
7. Click to select the **Select** check box for the **first line item that has a value in the Quantity** field.
8. Write down the Line and Release number used _____.
9. Select **Actions > Edit Freight Charges**. The **Edit Freight Charges (Modal)** form opens.
10. Type 25 in the **Freight** field.
11. Click the **OK** button. You are returned to the **Order Shipping** form.
12. Click the **Process** button.
13. Click **OK**. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."

14. Click **OK** button.
15. Click the **X** on the **Order Shipping** form.

Part 2: Generate the packing slip

1. Click the **Open** icon on the toolbar.
2. Type *packing slip* in the **Filter** field.
3. Click the **Packing Slip** form list item.
4. Click the **OK** button. The **Packing Slip** form opens.
5. Verify the **Ship** radio button is selected under **Report Type**.
6. Type *dc307* in the **Order** Starting field.
7. Click the **Process** button. The **Packing Slip Selection (Modal)** form opens.
8. Click the **Print** button. The **Packing Slip Report** opens in a new tab.
9. Review the packing slip report.
10. Write down your packing slip number _____.
11. Click the **X** on the **Packing Slip Report**. A dialog box opens with the message, "Report Submitted."
12. Click the **OK** button.
13. Click the **X** to close the **Packing Slip** form.

Shipping transactions

Listed below are the journal entries that occur because of various shipping and return transactions:

Transaction type	Transaction factors	Journal entries
Customer order shipment	- Manual shipment - Shipping Processing form - Stock location (/) quantity shipped - CR Return = No	Cost of Goods Sold = Debit Inventory = Credit
Customer order shipment	- Automatic shipment - Generate Order Pick List form - Post Material Issues = Yes	Cost of Goods Sold = Debit Inventory = Credit
Customer order shipment using the customer shipment	Shipment	Cost of Goods Sold in Process = Debit Inventory in Process = Credit

Transaction type	Transaction factors	Journal entries
approval functionality		
Customer order shipment using the customer shipment approval functionality	Shipment quantity approved	Cost of Goods Sold in Process = Debit Inventory in Process = Credit Cost of Goods Sold = Debit Inventory = Credit AR in Process = Debit Sales in Process = Credit
Customer order return prior to invoicing	• Stock Location (UN-SHIP) • Negative quantity shipped • CR Return = No	Cost of Goods Sold = Credit Inventory = Debit
Customer order return after invoicing	• Stock Location (CREDIT RETURN) • (/) quantity shipped • CR Return = Yes	Cost of Goods Sold = Credit Inventory = Debit
Return Adjustment	• Stock Location (RETURN ADJ) • Negative quantity shipped • CR Return = Yes	Cost of Goods Sold = Credit Inventory = Debit

System impacts: ship orders

The forms that can be reviewed to verify what occurred during a customer order shipping transaction are identified in the following table.

Form	Field or item to review
Customer Order Lines – Detail	Status field = Filled
Customer Order Lines - Shipping	Quantity Shipped field = quantity shipped for each CO shipment
Items	Quantity On Hand field = 0
Customer Order Listing	Verify customer order shipments are listed

Form	Field or item to review
Journal Entries – CO Dist	In the reference column note the: • INV CSH (Inventory Customer shipment) for the customer order • Debit to COGS • Credit to Inventory
Material Transactions	Filter by Transaction Type – Ship and your Item number. • Verify shipment transactions are listed

Troubleshooting shipping an order

If you are unable to ship an order, verify the customer order Status is Ordered. **Note:** You cannot ship an order that is in Planned status.

- Customer Order Lines – manually change the status to Ordered

Exercise 2.3: Modify shipments

In this exercise, you will unship a shipment before and after invoicing.

Exercise steps

Part 1: Return before invoicing

1. Click the Open icon on the toolbar.
2. Type order shipping in the Filter field.
3. Click the Order Shipping list item.
4. Click the OK button. The Order Shipping form opens.
5. Type dc307 in the Order field. Note: This is the order number you shipped in Exercise 2.2.
6. Press Tab.
7. Click the Filter in Place icon.
8. Click the CO Line/ Release Status drop-down arrow.
9. Click the Filled list item.
10. Click the Filter in **Place** icon.
11. Locate and select the Line and Release row that you shipped in the previous exercise.
12. Look at the bottom right side of form to see the **Qty Shipped**. This is the amount you shipped in previous exercise.
13. Click to **Select** the **Select** check box for your line item.

14. Type the **[negative value of Qty Shipped]** in the **Quantity** field. (For example, if your **Qty Shipped** is 10, then enter -10 in the **Quantity** field.)
15. Click the **Reason Code** field.
16. Click the **Reason Code** drop-down arrow.
17. Click the **OSP** list item.
18. Click the **Packing Slip** drop-down arrow.
19. Click the **[Packing Slip number created in Ex. 2.2 Part 2]** list item.
20. Click the **Process** button.
21. Click the **OK** button. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."
22. Click the **OK** button.
23. Keep the **Order Shipping** form open for next steps

Part 2: Return after invoicing

1. Type **[dc363]** in the **Order** field.
2. Press **Tab**.
3. Click to select the **Select** checkbox on Line 1.
4. Type **1** in the **Quantity** field.
5. Click to select the **CR Return** checkbox. **Note:** This makes it a credit return.
6. Click the **Reason Code** field.
7. Click the **Reason Code** drop down arrow.
8. Click the **OSP** from the list.
9. Click the **Process** button. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."
10. Click the **OK** button. **Note:** Now that the return is done it is available for accounts receivable to print the credit memo.
11. Click the **X** on the **Order Shipping** form.

Check your understanding

What is the shipping document that itemizes in detail, the contents of a particular package for shipment to a customer?

- a) Pick List
- b) Packing Slip
- c) Order Verification Report
- d) Shipping Transactions

Under which of the following conditions does the system prevent you from shipping customer orders?

- a) The package carrier drivers are on union strike
- b) The ship to location for the delivery cannot be verified
- c) A packing slip for the order was not created
- d) Either the customer account or the customer order has been placed on credit hold.

Lesson 3: Using Pick, Pack, and Ship

Estimated time

2 hours

Learning objectives

In this lesson, you will be able to describe the pick, pack, and ship process.

- Identify the process flow used in picking a customer order.
- Identify the process flow used in packing a customer order.
- Identify the process flow used in shipping a customer order.

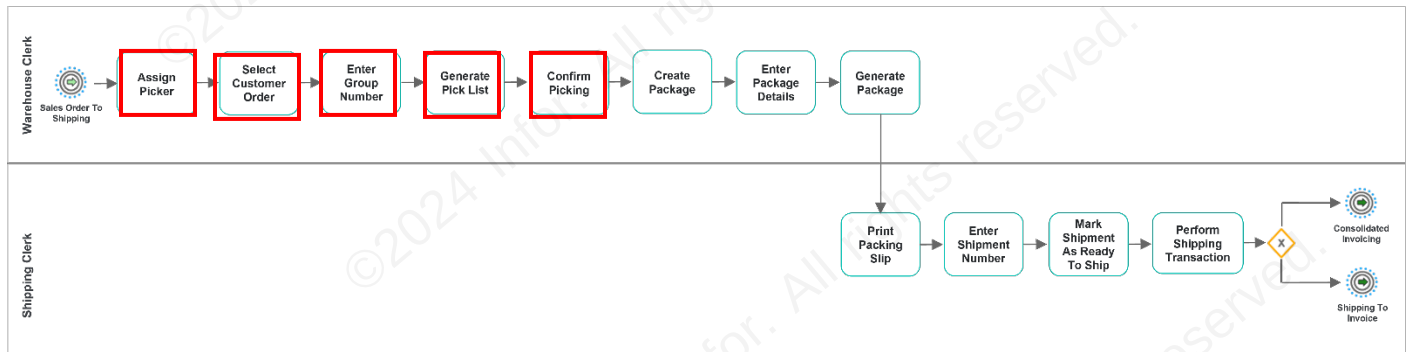

Topics

- Pick overview
- Pack overview
- Ship overview

Pick overview

You do not have to use the pack functionality. You can simply pick and ship if you choose.

The following table describes the pick functionality process flow:

Pick, pack, and ship process flow

Pick functionality allows you to:

- Assign a picker
- Select customer order
- Enter group number
- Confirm picking

Inventory Parameters

The Inventory Parameters form is used to set the packing and shipping location. It is also used to specify whether barcodes are printed on pick lists. You can also set up inventory reservation on this form.

There are two tabs on the Inventory Parameters form that are used for pick, pack, and ship:

- General
- Labels

General

The following table describes the drop-down lists and check box on the Inventory Parameters form, General tab that you need to set up:

Field	Description
Packing Location	The selection from the Packing Location becomes the default packing location on the Pick Workbench form. The location is the place where items are moved after they are picked.

Field	Description
Shipping Location	The selection from the Shipping Location becomes the default ship location on the Pack Workbench form. The location is the place where items are moved after they are packed.
Inventory Reservation Process Step	The selection from the Inventory Reservation Process Step determines when the system considers the inventory reserved to an order. The options are: • Pick Confirmation - When this option is selected, inventory is reserved when it is removed during the picking process on the Pick Confirmation form. • Pack Confirmation - When this option is selected, inventory is reserved when it is packaged on the Pack Confirmation form. None - When this option is selected, inventory is not reserved at any point.
Print Barcodes on Pick Lists	The Print Barcodes on Pick Lists prints barcodes on the pick list. If this check box is not selected, barcodes are not printed on the pick list.
Shipment Weight U/M	This field populates the Weight U/M. It is used when calculating Shipment weight.

Labels

From the Labels tab on the form, you can specify whether to print barcodes on pick lists. Inventory Parameters

The following table describes the fields on the Labels tab on the Inventory Parameters form you can use for printing barcodes on pick lists:

Field	Description
Template Logical Folder	The Template Directory field specifies the template directory. This is the file path where the BarTender label files (.btw files) are stored.
Output Logical Folder	The Output Directory field specifies the output directory. The output directory is where the label output files are stored. This directory is read by the Commander utility.

Items

Field	Description
Allow on Pick Workbench	Select this check box to allow the item to be included during the Pick Workbench process.

Non- Inventory Items

Field	Description
Allow on Pick Workbench	Select this check box to allow the item to be included during the Pick Workbench process.

Pick Workbench

The Pick Workbench form is used to create pick lists from customer orders with a status of Ordered. This is also where a picker is assigned to the pick list.

This form has two tabs:

- Orders
- Inventory

Orders

The following table describes the fields on the Pick Workbench form, Orders tab:

Field	Description
Packing Location	The Packing Location field displays the item stockroom location where the items are moved after they are picked. Inventory transactions created by picking show the inventory as moved to this location. This value is applied to all pick lists created when generate is clicked.
Picker	Users select the person assigned to perform the picking from the Picker drop-down list. This value is then assigned to all the pick lists created by clicking Generate.

Field	Description
Assign Locations	The Assign Locations check box, when selected, identifies the item stockroom locations on the pick lists. If this check box is not selected, the pick list only contains the item. The item stockroom location must be entered on the Pick Confirmation form. If your company does not know the location at the time the pick list is created, it may make sense to deselect assign locations so the location can be selected when it is picked.
Assign Serial Numbers	The Assign Serial Numbers check box, when selected, identifies lot and serial numbers (S/N) on the pick lists. If this check box is not selected, the pick list does not show which lot or S/N should be picked. They must be entered on the Pick Confirmation form.
Print Pick Lists	When the Print Pick Lists check box is selected it signals the system to print a copy of each list. The copies print when Generate is clicked.
Print Customer Order Kit Pick list	If this check box is selected and kit items exist, the customer order kit pick list for all kit items in the pick list is printed upon clicking Generate . Clear this check box to not print those items.
Skip Order Line When Cycle Count In Process	The Skip Order Line When Cycle Count in Process check box, when selected, excludes order lines from being added to a pick list if the item on the line is currently undergoing a cycle count. The line/release is still viewable on the form and can be selected, but it is not added to a pick list if this check box is selected.
Skip Order Line when Quantity Available is 0	Select this check box to exclude order lines from being added to a pick list if there is no quantity available for the item. The line/release is still viewable on the form and can be selected but it will not be added to a pick list if the field is selected.
Generate Bulk Pick List	When the Generate Bulk Pick List check box is selected a summary pick list prints in addition to the other print lists when generate is clicked. This pick list shows the item/lot location information for all pick lists printed.
Include Zero Quantity Kit Items	Include kit items when the quantity on hand is equal to zero.
Generate	The Generate button, when clicked, generates pick lists. If more than one picker is specified for a group, an error occurs and prevents the pick lists from generating. All selected records are added to pick lists and grouped by the number in the Group column. If the Group column is blank, an error message displays, and the process will not complete.

Field	Description
Group	On the Pick Workbench form, this field is used to group orders (lines/releases) together into a single pick list. Selected Groups must have the same Customer/ Ship To/ Ship Via and Payments Methods. When the Generate button is clicked, the lines that share the same group number are combined into a single pick list.

If inventory locations are assigned, other pick lists cannot access the same inventory.

The quantity to Pick Column excludes any quantity that was shipped outside of the Pick Pack and Ship Process.

Credit hold shows on this form as checkbox in the grid so users can see if customer/ order is on credit hold.

When you Select a line in the grid, you see immediately if the Quantity Ready is less than the Quantity to Pick for that Line.

The validation only works on one line at a time.

If you have two lines for the same Item, the sum of Quantity to Pick is not validated.

Both lines could appear to be Ready to Ship, though we don't actually have enough inventory to Pick both lines.

Inventory

The Inventory tab on the Pick Workbench form is used for sourcing inventory that is to be picked. You can specify which locations the inventory should come from. The lines/releases that display are from the records selected on the Orders tab. It is not required to go to this tab and it is possible to process the inventory tab events when Generate is clicked on the Order tab.

Pick Maintenance

The Pick Maintenance displays the details of the pick list. The order grid on this form is read-only. The Pick Maintenance form contains the following information:

- Order
- Line
- Release
- Item
- Qty to Pick
- Qty Picked

- U/M
- Description

Status

The Status field specifies the status of the pick list. Status options are:

- Open
- Picked
- Packed
- Shipped

The status defaults to Open for new pick lists. The status can be manually changed to Picked on this form or on the Pick Confirmation form.

Pick Maintenance is an optional step in the picking process.

Exercise 3.1: Pick Workbench with assigned locations

In this exercise, you will use the Pick Workbench form.

Exercise steps

Part 1: Generate the pick list

1. Click the **Open** icon on the toolbar.
2. Type *pick workbench* in the **Filter** field.
3. Click the **Pick Workbench** form list item.
4. Click the **OK** button. The **Pick Workbench** form opens.
5. Click the **Filter in Place** icon.
6. Verify **PACK** displays in the **Packing Location** field.
7. Verify the **Assign Locations** check box is selected.
8. Find two different orders from the same customer number. Locate **Customer Number** 2, 3, 9, 15, or 24 for this step.
9. Verify the **Qty Ready** column is greater or equal to the **Qty To Pick** column. **Note:** Each order must have a minimum of one line to show the grouping functionality.

If you don't have any items that have qty ready column greater or equal to the qty to pick column, you can do a Miscellaneous Receipt to receive additional inventory. **Note:** If your qty to pick is 100 and you only have 10 ready you need to receive 90 or more. Click **here** to watch a video on Miscellaneous Receipt.

10. Type **1** in the **Group** column for the selected orders so they are combined into a single pick list.

11. Find the **Item** and **Qty to Pick** for selected lines.
12. Write those values here.
 Order _____ Item _____ Qty to Pick _____
 Order _____ Item _____ Qty to Pick _____
13. Click the **Inventory** tab.
14. Select **Line 1** in the middle grid.
15. Verify the **Location** and **Qty on Hand** found in the lower grid.
16. Click the **Generate** button. The **Pick List Report** opens in a new tab.
17. Locate and write down your pick list number _____.
18. Click the **X** on the **Pick List Report** tab. A dialog box opens with the message, "Generate was successful."
19. Click the **OK** button. A dialog box opens with the message, "Report Submitted."
20. Click the **OK** button.
21. Click the **X** on the **Pick Workbench** form

Part 2: Verify the pick list was generated

1. Click the **Open** icon on the toolbar.
2. Type *pick maintenance* in the **Filter** field.
3. Click the **web.pickmaintenance** form list item.
4. Click the **OK** button. The **Pick Maintenance** form opens.
5. Select [your first pick list number] in the grid view.
6. Click the first line item and locate the **Location** in the grid view.
7. Write the **Location** here _____.
8. Click the second line item and locate the **Location** in the grid view.
9. Write the **Location** here _____.
10. Find the **Status** of the pick list.
11. Write the **Status** here _____.
12. Click the **X** on **Pick Maintenance**Type the step.

Part 2: Verify the pick list was generated

1. Click the **Open** icon on the toolbar.
2. Type *pick maintenance* in the **Filter** field.
3. Click the **web.pickmaintenance** form list item.
4. Click the **OK** button. The **Pick Maintenance** form opens.
5. Select [**your first pick list number**] in the grid view.

6. Click the first line item and locate the **Location** in the grid view.
7. Write the **Location** here _____.
8. Click the second line item and locate the **Location** in the grid view.
9. Write the **Location** here _____.
10. Find the **Status** of the pick list.
11. Write the **Status** here _____.
12. Click the **X** on **Pick Maintenance**.

Exercise 3.2: Pick Workbench without assigned locations

In this exercise, you will pick items without the assign locations checkbox selected.

Exercise steps

Part 1: Generate the pick list

1. Click the **Open** icon on the toolbar.
2. Type *pick workbench* in the **Filter** field.
3. Click the **Pick Workbench** form list item.
4. Click the **OK** button. The **Pick Workbench** opens.
5. Click to deselect the **Assign Locations** checkbox.
6. Click to select the **Select** check box for the first two lines.
7. Verify the **Qty Ready** column is greater or equal to the **Qty To Pick** column. **Note:** Each order must have a minimum of one line to show the grouping functionality.

If you don't have any items that have qty ready column greater or equal to the qty to pick column, you can do a Miscellaneous Receipt to receive additional inventory. **Note:** If your qty to pick is 100 and you only have 10 ready you need to receive 90 or more. Click **here** to watch a video on Miscellaneous Receipt.

8. Type **1** in the **Group** column for the selected orders so they are combined in a single pick list.
9. Find the **Item** and **Qty to Pick** for each item.
10. Write those values here.

Order _____ Item _____ Qty to Pick _____

Order _____ Item _____ Qty to Pick _____

Note the **Inventory** tab is deactivated when **Assign Locations** is not selected.

11. Verify the **Location** and **Qty on Hand** for selected lines.
12. Click the **Generate** button. A dialog box opens with the message, "Generate was successful."
13. Click **OK**. A dialog box opens with the message, "Report Submitted."
14. Click the **OK** button.

15. Click the **X** on the **Pick Workbench** form.

Part 2: Verify the pick list was generated

1. Click the **Open** icon on the toolbar.
2. Type *pick maintenance* in the **Filter** field.
3. Click the web.pickmaintenance form list item.
4. Click the **OK** button. The **Pick Maintenance** form opens.
5. Click the **Filter in Place** icon.
6. You should have 2 Pick Lists. **Note:** You have two pick lists created because the Group numbers were not updated to be the same in this exercise.
7. Find the **pick list number** in the grid view.
8. Write the **pick list numbers** here _____ and _____.

If you need to unpick inventory or split your pick list you can do that now using the Unpick Inventory form or Pick List Splitting.

9. Find the **status** of the pick list.
10. Write the **status** here _____.
11. Click the **X** on **Pick Maintenance** form.

Unpick Inventory

The Unpick Inventory form is used to place picked items back into inventory. This can only be done if the pick list has not yet been packed. Items are returned to the location specified on the line. If items were reserved during pick confirmation, they are unreserved at this time.

The following table describes the check box, fields, and button on the Unpick Inventory form:

Field	Description
Select	The Select check box, when selected, specifies the lines to unpick.
Qty	The Qty field displays the quantity of the line to unpick.
Location	The Location field displays the location where the unpicked inventory is returned.
Process	The Process button, when clicked, unpicks the selected lines.

If inventory is unpicked, the lines must be deleted from the pick list on the Pick Maintenance form and the pick list. It is then manually flagged as “Picked” to move forward to packing.

Pick List Splitting

When shipments are created, all contents of a pick list must be on one shipment. If a pick list needs to be split into two shipments, then two pick lists must be created. The Pick List Splitting form is used to split the contents of a pick list into two pick lists.

The following table describes the check box and button on the Pick List Splitting form:

Field	Description
Select	The Select check box, when selected, specifies the lines that require splitting from the existing pick list.
Process	When clicked, Process button removes the selected lines from the current pick list and a new pick list record is created.

When you split a pick list, a message that the operation is complete displays. A new pick list number also displays.

Pick Confirmation

The Pick Confirmation form records the picking results.

The following table describes the information on the Pick Confirmation form:

Field	Description
Pick List drop-down list	The selection from the Pick List drop-down list identifies the pick list for which the user enters data. This is selected by the user.
Packing Location field	The Packing Location field displays the location the inventory is moved to when Complete is clicked.

Field	Description
Picker field	The Picker field displays the picker's name assigned to the pick list.
Whse field	The Whse field displays the warehouse associated with the pick list.
Record Differences check box	The Record Differences check box, when selected, determines how the pick list information is entered: If the check box <i>is</i> selected, the detail information of the pick list populates the grid. This information is summarized by Item, Location, Lot, and S/N. If the check box is <i>not</i> selected, the grid is left empty.
Complete button	The Complete button, when clicked, confirms the pick list.

The Quantity available column in the grid format is based on location, lot and selected serial number. The order number, line and release also show in the grid columns.

Customer Order Lines

The Customer Order Lines form displays the total quantity of the item picked in the Picked field.

Exercise 3.3: Confirm picked amounts

In this exercise, you will confirm picked amounts.

Exercise steps

Part 1: Verify the pick list

1. Click the **Open** icon on the toolbar.
1. Type *pick confirmation* in the **Filter** field.
2. Click the **Pick Confirmation** form list item.
3. Click the **OK** button. The **Pick Confirmation** form opens.
4. Click the **Pick List** drop-down arrow.
5. Click **[your pick list]** generated in **Exercises 3.1**. **Note:** This pick list will have Locations selected.
6. Verify the pick list information is correct.
7. Click the **Complete** button. A dialog box opens with the message, "[Process] was successful."

8. Click the **OK** button.
9. Click the **Pick List** drop-down arrow.
10. Select the **[your first pick list]** you generated in **Exercise 3.2**. Note: This pick list does not have Location defined.
11. Click the **Location** field.
12. Click the **Location** drop-down arrow.
13. Click to select **[a location that has QOH]** in the **Location** field.
14. Click the **Lot** field.
15. Click the **Lot** drop-down arrow.
16. Click the **[Lot number provided]** list item.
17. Click the **Complete** button. A dialog box opens with the message, "[Process] was successful."
18. Click the **OK** button.
19. Repeat steps 5-19 for the second pick list generated in Exercise 3.2.
20. Click the **X** on **Pick Confirmation** form.

Part 2: Confirm the amount picked for each line

1. Click the **Open** icon on the toolbar.
2. Type *customer order lines* in the **Filter** field.
3. Click the **web.customerorderlines** form list item.
4. Click the **OK** button. The **Customer Order Lines** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your first order number from Ex. 3.1]* in the **Order** field.
7. Click the **Filter in Place** icon.
8. Click the **General** menu option.
9. View the **Picked** amount.
10. Click the **Filter in Place** icon.
11. Type *[your first order number from Ex. 3.2]* in the **Order** field.
12. Click the **Filter in Place** icon.
13. View the **Picked** amount.
14. Click the **X** on **Customer Order Lines** form.

Print Pick Lists

The Print Pick Lists form is used to print or reprint pick lists. Once a pick list is generated from the Pick Workbench form, it is visible on this form.

The Status field controls which pick lists display in the grid. The pick lists matching the selected status display.

There are several reports that can be printed:

- Pick List Report
- Pick List Report (with barcodes)
- Bulk Pick List Report

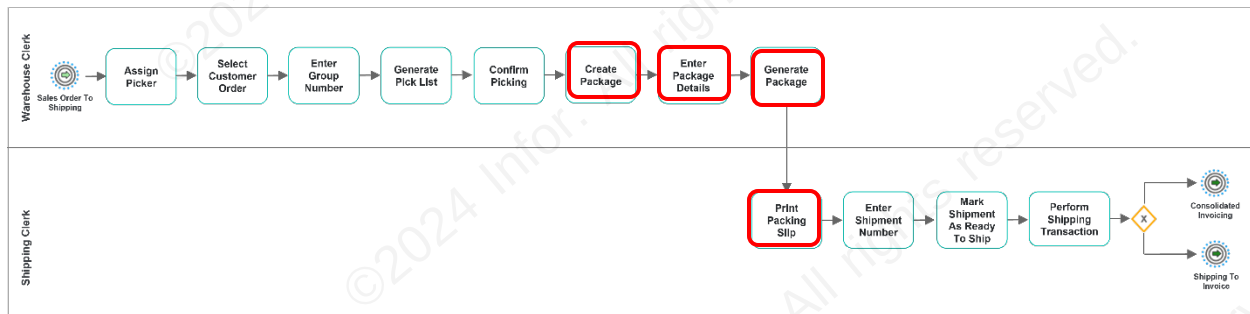

You must set the option for printing barcodes on the Inventory Parameters form.

Pack overview

Using pack functionality is optional. You can pick and go directly to ship without the pack functionality.

The following table describes the pack functionality process flow:

Pick, pack, and ship process flow

Pack functionality allows you to:

- Create package
- Enter package details
- Generate package
- Print packing slip

Pack Workbench

The Pack Workbench form is used to group pick lists together into a shipment. This is not a required part of the process. If a shipment is built from a single pick list, you do not need to use the Pack Workbench form.

- Unpicked items are also shown on the pick list grid on Pack workbench form, and allow users to generate pick lists and unpicked items into the same shipment if they have the same Customer, 'Ship To' and Warehouse. For the Unpicked items, the users could generate shipments on the form – Pack Workbench.
- Select the Customer Order Lines that you wish to add to the shipment, but haven't been picked yet.
- Input ship quantity, from location, lot and serials if needed for the selected lines
- Change the Ship Location or Packer if they want.
- Click the Generate button, system will do check for each selected customer order lines and then generate shipments for selected pick lists and customer order lines with inputted quantity, lot, serials and from location. Generate them into one shipment if they have the same group number in temp table.
- Do inventory movement for unpicked items on shipment from the pack location to the ship location and update the location on shipment seq.
- Users could merge the unpicked shipment and picked shipment through the Shipment Merging form also. The merger rule will not change. They should have the same Customer, Customer Ship To, Warehouse and Ship Location.
- Also, once the shipments are merged they cannot be shipped separately.

The following table describes the drop-down lists and button on the Pack Workbench form;

Field	Description
Ship Location	The selection from the Ship Location identifies the item stockroom location where goods will be moved after packing. The inventory transactions created by packing show that the inventory has been moved to this location. This is selected by the user.
Packer	The person assigned to pack the shipment is selected from the Packer. This is selected by the user.
Generate	The Generate button, when clicked, puts selected orders into shipments.

If more than one packer is specified for a group of pick lists, an error occurs and prevents the shipment from being generated.

Package Types

Use this form to define package types used for shipments. Define the weight, length, height, and width of the package.

Field	Description
Weight	Specify the weight of the package type.
Length	Specify the length of the package type.
Height	Specify the height of the package type.
Width	Specify the width of the package type.
Packaging Weight	Specify the packaging weight of the package type.
U/M	This field appears three times on the Package Types form; one for weight, one for package weight, and one for the dimension which includes length, height, and width. Specify the unit of measure in the desired field

Pack Confirmation

The Pack Confirmation form is used to record how the items will be packed for a shipment. It is also used to move inventory assigned to a shipment from the packing location to the shipping (or staging) location. Creation of packages is not required for shipments and the inventory can remain at the packing location.

The following describes the drop-down lists, fields, check box, and buttons on the Pack Confirmation form;

Field	Description
Shipment	The selection from the Shipment drop-down list identifies the shipment to be packed. This drop-down list is required unless a pick list number is selected from the Pick List drop-down list.
Pick List	The selection from the Pick List drop-down list identifies the pick list number. If the pick list has been assigned to a shipment, the shipment number and related information populate. If multiple shipments share the pick list, the Shipment field is filtered on the pick list. This field is required unless a shipment number is entered. The list contains all pick lists with a status other than "Shipped." If no shipment is found for the pick list, a message displays indicating a shipment does not exist and that one will be created.
Status	The Status field displays the current status of the pick list.
# of Packages	The # of Packages field displays the number of packages for the shipment. This field will be automatically calculated. On the Pack Confirmation the # Packages will be calculated when a packages is added to the shipment or a packages merge with another package and when a package is deleted. Any package contain in another package will not be added to the shipment # packages
Total Weight	This field will be automatically calculated. When a shipment is created the weight of the shipment is calculated by summing (item quantity * item weight) for each shipment line on the shipment, with a unit of measure conversion to the shipment unit of measure
Whse	The Whse field displays the warehouse for the shipment.
Ship From Location	The selection from the Ship From Location drop-down list identifies the location of the shipment.
Packer -	The name of the person who is assigned to pack the shipment is selected from the Packer drop-down list. This is selected by the user.

Field	Description
Customer	The Customer field displays the customer for the shipment. This is a numeric value.
Ship To	The Ship To field displays the customer ship-to. This is a numeric value identifying the customer's ship to address.
Qty	The Qty field specifies the quantity of the item to put into the packages. This is the amount that should be put into each package that is created. • If the full quantity cannot be put into each package, then the last package receives the remainder. • If this field is left blank, the entire quantity is put into one package. If multiple items are selected, this field is disabled and the entire quantity is used.
Package ID	The Package ID field appears twice; once on the middle-right side of the form, and once below the packages grid at the bottom of the form. • In the field below the packages grid, the user selects a package to which the selected packages in the grid should be added. In the Package field on the right side of the form, the user selects a package. This is used to add the selected items/serial numbers to a specific package.
Weight	The user enters the weight of the package or packages in the Weight field.
Rate Code	The Rate Code field appears twice: as a field on the form and in the packages grid. This is where the user enters the rate code.
NMFC (National Motor Freight Code)	The NMFC field is where the user enters the NMFC.
Marks and Exceptions	The Marks and Exceptions field is where the user enters a description of the package. Note: The Package Description field is also used for the package description.
Hazardous	The Hazardous check box, when selected, identifies the item or package as hazardous material.
Package Type	The Package Type field is where the user enters the container size or package number for this delivery order line. This field is for reference purposes only.

Field	Description
Package Description	The Package Description field is where the user enters a description for the type of package. Note: The Marks and Exceptions field is also used for the package description.
Process	When Process is clicked the package information entered on the form is saved and the items move from their current location to the ship location.
Packing Slip	The Packing Slip button, when clicked, accesses the Shipment Packing Slip Report form where the packing slip is generated.
Create/Add to Package button	The Create/Add to Package button, when clicked, creates packages or adds the selected items/serial numbers to the packages defined in the Package field. Also, records appear in the packages grid for each package that was created. The packages are given a numeric identifier beginning at "1" and increase by "1" for each new package added. The items/serial numbers that are added to the packages show in the Items and Serial Numbers tabs that appear next to the packages grid.

Shipment Packing Slip Report

The Shipment Packing Slip Report form is used to print the Shipment Packing Slip Report.

You can also access this report from the Pack Confirmation form.

Unpack Inventory

Use this form to remove inventory that has been assigned to a shipment. The inventory can either be returned to the pick list to be added to a new shipment; removed from the shipment, not returned to the pick list, and moved to a different location; or just removed from the shipment.

Field	Description
Shipment	Select the shipment ID from which you want to unpack inventory.
Customer	The customer of the shipment is displayed.
Warehouse	The warehouse of the shipment is displayed.
Return to Pick List	Select this check box if the quantity being unpacked should be returned to the pick list. The inventory will be moved to the pack location specified on

Field	Description
	the pick list. If this check box is cleared, the quantity is not available from the pick list.
Reduce Quantity Only	Select this check box to reduce the quantity that will be shipped but not move any inventory to a different location or have the quantity available on the pick list again. This can be used to update a shipment record if an inventory transaction in another part of the system takes inventory that was assigned to a shipment. If this check box is cleared, the inventory being reduced can also be moved.
Status	The status of the shipment is displayed.
Ship To	The ship to of the customer is displayed.
Location	The ship location for the shipment is displayed

Exercise 3.4: Process a packing slip

In this exercise, you will process a packing slip.

Exercise steps

Part 1: Pack Workbench

1. Click the **Open** icon on the toolbar.
2. Type *pack workbench* in the **Filter** field.
3. Click the **Pack Workbench** list item.
4. Click the **OK** button. The **Pack Workbench (Filter in Place)** form opens.
5. Click the **Pick List** drop-down arrow.
6. Click the **[your first pick list from Ex 3.1]** list item.
7. Click the **Filter in Place** icon.
8. Click the **Select All** button.
9. Verify **1** in Group column. **Note:** If your pick list only has one order line this step isn't necessary.
10. Click the **Generate** button. A dialog box opens with the message "Generate was successful."
11. Click the **OK** button.
12. Click the **X** on the **Pack Workbench** form.

Part 2: Pack Confirmation for Ex.3.1

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.

2. Type *pack confirmation* in the **Filter** field.
3. Click the **Pack Confirmation** list item.
4. Click the **OK** button. The **Pack Confirmation** form opens.
5. Click the **Pick List** drop-down arrow.
6. Click the **[your first pick list from Ex. 3.1]** list item.
7. Press **Tab**.
Note: This creates the shipment number.
8. Write the shipment number here _____.
9. Click to select the **Select** check box.
10. Click to select the **Select** check box for Line 1 in the first grid.
11. Click the **Package Type** drop-down arrow.
12. Click the **BDL** list item.
13. Type *shipping container* in the **Description** field.
14. Click the **Save** icon.

Note the Packages tree view now has **Package ID: 1**.

15. Click to select the **Select** check box for Line 1 in the first grid.
16. Click the **Select All** button at bottom of form. **Note:** you may need to scroll down to see button.
17. Click the **Add To Package** button. The items have now been added to that package ID in the Packages tree view.
18. Click the **Packing Slip** button. The **Shipment Packing Slip Report** form opens.
19. Verify the **Print Blank Pickup Date** check box is selected.
20. Verify your shipment number displays in the **Shipment** field for both **Starting** and **Ending**.
21. Click the **Preview** button. The **Ship Packing Slip** report opens in a new tab.
22. Review the report.
23. Write down your shipment number _____.
24. Click the **X** on the **Ship Packing Slip** report tab.

Part 3: Pack Confirmation for Ex. 3.2

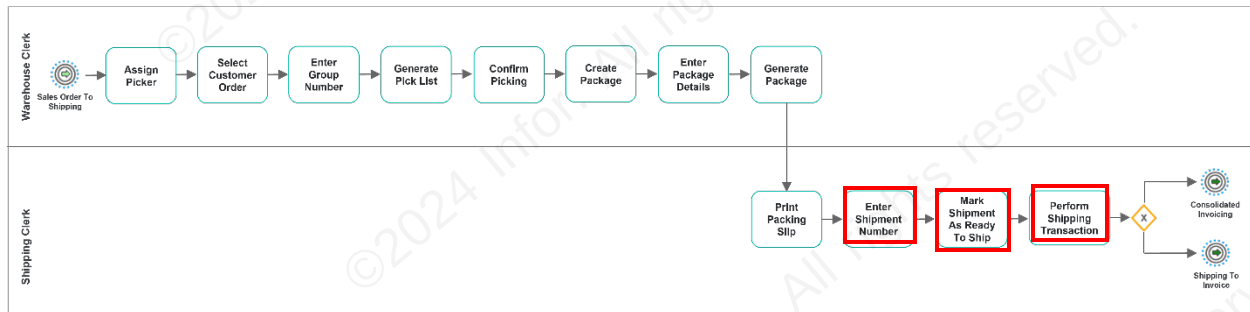

1. Click the **Pack Confirmation** tab.
2. Click the **Pick List** drop-down arrow.
3. Click the **[your first pick list from Ex. 3.2]** list item. A dialog box opens with the message, "Shipment that has [Pick List: XXX] does not exist. [Add] will be performed for Shipment."
4. Click the **OK** button. A dialog box opens with the message, "[Generate] was successful."
5. Click the **OK** button.
6. Click the **Package Type** drop-down arrow.
7. Click the **BDL** list item.

8. Type *shipping container* in the **Description** field.
9. Click to select the **Select** check box in the first grid for **Package ID 1**.
10. Click the **Save** icon.
11. Click to select the **Select** check box in the first grid for **Package ID 1**.
12. Click to select the **Select** check box in the lower grid for **[your item]**.
13. Click the **Add To Package** button. The item(s) have now been added to that package ID.
14. Click the **Pick List** drop-down arrow.
15. Click the **[your second pick list from Ex. 3.2]** list item. A dialog box opens with the message, "Shipment that has [Pick List: XXX] does not exist. [Add] will be performed for Shipment."
16. Click the **OK** button.
17. Click the **Package Type** drop-down arrow.
18. Click the **BDL** list item.
19. Type *shipping container* in the **Description** field.
20. Click to select the **Select** check box in the first grid for **Package ID 1**.
21. Click the **Save** icon.
22. Click to select the **Select** check box in the first grid for **Package ID 1**.
23. Click to select the **Select** check box in the lower grid for **[your item]**.
24. Click the **Add To Package** button. The item(s) have now been added to that package ID.
25. Click the **Packing Slip** button. The **Shipment Packing Slip Report** form opens.
26. Verify the **Print Blank Pickup Date** check box is selected.
27. Verify your shipment number displays in the **Shipment** field for both **Starting** and **Ending**.
28. Click the **Preview** button. The **Ship Packing Slip** report opens in a new tab.
29. Review the report.
30. Write down your shipment number _____.
31. Click the **X** on the **Ship Packing Slip** report tab.
32. Click the **X** on the **Shipment Packing Slip Report** form.
33. Click the **X** on the **Pack Confirmation** form.

Ship overview

Ship functionality is used to create, update, and maintain a shipment.

The following table describes the ship functionality process flow:

Pick, pack, and ship process flow

Ship functionality allows you to:

- Split a shipment into two shipments
- Combine two or more shipments together
- Delete shipments and related records

Shipments can only be deleted if they have been shipped and invoiced and when all related transactions that store a reference to the shipment are also deleted.

Items, delivery orders, shipping processing orders, and electronic signature transactions are not processed through this pick, pack, and ship functionality.

If reservations are deleted or the quantities are reduced, the shipment is not updated accordingly. The shipment must be updated using the Unpack Inventory form before the reservation is changed.

Shipment Master

The Shipment Master form is used to create, update, and maintain a shipment. It has several tabs, including:

- General
- Charges
- Pick Lists
- Packages
- Consignee
- Consignor
- Invoicee
- Other

General tab

The following table describes the fields and drop-down lists on the Shipment Master form, General tab:

Field	Description
Shipment	The Shipment field displays the ID number of the shipment. If a new record is created, this value is set when the record is saved. The new ID number is the current highest shipment ID number plus "1."
Status	The selection from the Status drop-down identifies the status of the shipment. The options are: • Open • Ready to Ship • Shipped • Canceled
Whse	The Whse field displays the warehouse for the shipment.
Ship From	The selection from the Ship From drop-down list identifies the location of the shipment.
Parent Container	The system shall provide for the optional specification of a Parent Container to which the Shipment Master shall be assigned. The Parent Container field shall be enabled for Open and Ready Statuses and shall be disabled for Shipped Status. The list of valid Containers shall include only those defined using the Shipment reference type and using the same values for Warehouse and Ship From location.
Customer	The Customer field identifies the customer for the shipment.
Ship To	The selection from the Ship To drop-down list identifies the ship-to location for the customer. This is a numeric value.
Ship Date	The Ship Date field displays the date the shipment ships.
Pick List	The selection from the Pick List drop-down list identifies the pick list associated with the shipment. This is used when shipments are created directly on this form.
# Packages	The # of Packages field shows the number of the packages in the shipment. This field is disabled if the status is "Shipped."
Total Weight	The Total Weight field shows the total weight of the shipment. This field is disabled if the status is "Shipped."

Field	Description
Weight U/M	The selection from the Weight U/M drop-down list identifies the U/M for the weight. This field is disabled if the status is "Shipped."
Packer	The person assigned to pack the shipment is selected from Packer drop-down list. This is selected by the user.

The ship via code on the General tab defaults from the Customer Order form.

On the Shipment Master form, there is an Order Invoicing button next to the Consolidated Invoicing button.

It launches the Order Invoicing/Credit Memo form with the current Shipment Master set as the Starting and Ending Shipment values.

The Consolidated Invoices button is disabled if no Order Lines on the Shipment Master are marked as "Consolidated Invoice."

The Order Invoicing button is disabled when all Order Lines on the Shipment Master are marked as "Consolidated Invoice."

Charges

Enter freight or miscellaneous charges on this tab and these amounts will automatically update the customer order. It also shows accumulated freight and accumulated miscellaneous charges.

Pick Lists

The Pick Lists tab displays the details for which order/line/release quantities are fulfilled by the shipment and which lots are used. It also lists the pick lists where the line/release originated and displays the current location where the items reside. After shipping, the Qty Shipped field is updated and viewable. All the fields on this tab are read-only.

Packages

The Packages tab displays the packages created for the shipment. All the fields on this tab are read-only. The Tracking Number field displays the lead tracking number. For example, if three packages are listed, all of them display the same tracking number. That tracking number is the number for the first package.

Consignee

The information in the fields on the Consignee tab come from when the shipment is created on the Pack Workbench form, or when the pick list is selected on the Shipment Master form. If the shipment is to be drop shipped to a different location, that address is specified here.

Consignor

The Consignor tab displays the name of the company generating the shipment. This information comes from the General Parameters form. The consignor name, consignor address, consignor phone, and consignor fax number display.

Invoicee

The Invoicee tab displays the address where the invoice is sent. This defaults from the Customer and Ship To fields on the top of the form.

Other

The Other tab displays the Producer and Exporter fields. These fields default to the company generating the shipment. These fields can be overridden.

Ship Confirmation

The Ship Confirmation form is used to ship a shipment. Only shipments with a status of Ready to Ship appear on this form.

Shipment Splitting

The Shipment Splitting form is used to split a shipment into two shipments. Select specific packages if they exist or select the order/lines/releases if packages are not created.

The information on the Packages tab and Lines tab are read-only.

Shipment Merging

The Shipment Merging form is used to combine two or more shipments together. The shipments selected in the grid are added to the shipment defined in the header. The fields in the grid are read-only.

Demo 3.5: Shipment Merging

This demonstration shows how to merge shipments.

Demo steps

Exercises in this course are structured for multiple learners in a multi-tenant environment. Since the exercise can't be duplicated it will be a demonstration.

1. Click the **Open** icon on the toolbar.
2. Type *shipment merging* in the **Filter** field.
3. Click the **Shipment Merging** list item.
4. Click the **OK** button. The **Shipment Merging** form opens.
5. Click the **Shipment** drop-down arrow.
6. Click the **[your shipment number from Ex. 3.4]** list item.
7. Click to select the **Select** check box.
8. Click the **Process** button. A dialog box opens with the message, "Process was successful".
9. Click the **OK** button.
10. Click the **X** on **Shipment Merging** form.

Exercise 3.6: Ship a shipment

In this exercise, you will ship a shipment.

Exercise steps

Part 1: Review shipment master

1. Click the **Open** icon on the toolbar.
2. Type *shipment master* in the **Filter** field.
3. Click the **Shipment Master** list item
4. Click the **OK** button. The **Shipment Master (Filter in Place)** form opens.
5. Click the **Shipment** drop down arrow.
6. Click the **[your shipment number from Ex. 3.2 Pt. 2]** list item.
7. Click the **Filter in Place** icon.
8. Click the **Charges** tab.
9. Type *50.00* in the **Freight** field.

10. Click the **Pick Lists** tab.
11. Verify your pick list(s).
12. Click the **Packages** tab.
13. Verify your package(s).
14. Click the **Status** drop-down arrow.
15. Click **Ready to Ship** list item.
16. Click the **Save** button.
17. Click the **Filter in Place** icon.
18. Repeat steps 5-17 for your two other shipments.

Part 2: Ship

1. Click the **Open** icon on the toolbar.
2. Type **ship confirmation** in the **Filter** field
3. Click the **Ship Confirmation** list item
4. Click the **OK** button. The **ShipConfirmation** form opens.
5. Click the **Filter in Place** icon.
6. Click the **Shipment** drop down arrow.
7. Click the **[your first shipment]** from the list.
8. Click the **Filter in Place** icon.
9. Click to select the **Select** check box.
10. Click the **Ship** button.
11. Click the **OK** button. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."
12. Click the **OK** button.
13. Repeat steps 5-12 for your other two shipments.
14. Click the **X** on **Ship Confirmation** form.
15. Click the **X** on **Shipment Master** form.

Unship Shipment

Use this form to unship shipment lines. The unshipped inventory can be moved back to the packing stage or back to stock. You can also change the shipment status from Shipped to Open. This allows you to back out a shipment all the way, if for some reason the shipment gets cancelled. The process can also be used to back out part or all a shipment line, if it is discovered that the inventory for the shipment was damaged or used by another process.

After unshipping the shipment, you also need to:

- Unpack inventory
- Unpick inventory

- Delete pick list on pick maintenance.

If the shipment has been invoiced, no lines show in the grid. You would have to return the inventory using the Order Shipping form or use Return Material Authorizations,

Exercise 3.7: Unship Shipment

In this exercise, you will unship the shipment from previous exercise.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Unship Shipment and Unpack Inventory

1. Click the **Open** icon on the toolbar.
2. Type *unship shipment* in the **Filter** field.
3. Click the **Unship Shipment** list item.
4. Click the **OK** button. The **Unship Shipment** form opens.
5. Click the **Shipment** drop-down arrow.
6. Click **[your third shipment number]** list item.
7. Select the **Select** check box for Line 1.
8. Click the **Quantity** field.
9. Verify the quantity to be unshipped. **Note:** Depending on the order you used this number will vary.
10. Click the **Reason Code** drop-down arrow.
11. Click the **OSP** list item.
12. Click the **Process** button. A dialog box opens with the message “1 Unshipping Transaction(s) were posted.”
13. Click the **OK** button. **Note** the Order number used for Unship Shipment.
14. Click the **Open** icon on the toolbar.
15. Type *unpack inventory* in the Filter field.
16. Click the **Unpack Inventory** list item.
17. Click the **OK** button. The **Unpack Inventory** form opens.
18. Click the **Shipment** drop-down arrow.
19. Click the **[your shipment number]** list item.
20. Verify the **Return To Pick List** check box is selected. **Note:** If this checkbox is cleared the quantity is not available from the pick list.

21. Verify the **Qty Available** field. **Note:** This is the same amount as the unshipped quantity.
22. Click to select the **Select** check box.
23. Click the **Process** button. A dialog box opens with the message “All pick lists have been deleted from this shipment. [Shipment: XXX] will be deleted.”
24. Click the **OK** button. A dialog box opens with the message “[Process] was successful.”
25. Click the **OK** button.

Part 2: Unpick Inventory and delete Pick Maintenance

1. Click the **Open** icon on the toolbar.
2. Type *unpick inventory* in the **Filter** field.
3. Click the **Unpick Inventory** list item.
4. Click the **OK** button. The **Unpick Inventory** form opens.
5. Click the **Pick List** drop-down arrow.
6. Click the **[your pick list]** from the list.
7. Click to select the **Select** checkbox.
8. Click the **Process** button. A dialog box opens with the message “[Process] was successful.”
9. Click the **OK** button.
10. Click the **Open** icon on the toolbar.
11. Type *pick maintenance* in the Filter field.
12. Click the **web.PickMaintenance** list item.
13. Click the **OK** button. The **Pick Maintenance** form opens.
14. Click **[your Pick List]** line. The Status will display Open.
15. Click the **Delete** icon. A dialog box opens with the message “Selected records will be permanently deleted upon Save.”
16. Click the **OK** button.
17. Click the **Save** icon. Your order will display on the Pick Workbench.
18. Click the **Window** drop-down arrow.
19. Click the **Close All** list item.

Change Consolidated Invoicing Utility

Field	Description
Process Customers	Select this check box to change the Consolidated Invoicing value on customer records.

Field	Description
Process Orders	Select this check box to change the value on customer order/line records.
Customers	Select the numbers of the first and last customers you want to include in the report, activity, or utility.
Orders	Select the starting and ending numbers of the customer to include on the report, activity or utility.

UPS and FedEx

When United Parcel Service® (UPS®) and FedEx® systems are integrated with the system, the system databases exchange information. UPS and FedEx systems can write information to a table. Users can view order tracking numbers attached to UPS and FedEx shipments.

For more information on integrating UPS and FedEx systems with the system, refer to the UPS FedEx Integration Guide found on Infor Xtreme.

Writing information to the database from UPS and FedEx

When a UPS shipment is complete, several pieces of information are written to a table. Based on an export map set up by the end user in the carrier's software, CarrierShip, ShipmentID, PackageID, TrackingNumber, Weight, Void Indicator, and Freight Cost values can all be recorded in the system table.

Writing freight cost to shipment

The system database logic evaluates the CarrierCost using information written to the **CarrierShip** table. If the Bill To Transportation field for the customer is Shipper, the system applies a negative cost if it is a void shipment, applies a freight upcharge percent if the current customer is charged freight plus a freight markup value, and adds the upcharge to the freight amount on the Shipment in the customers stated currency.

Viewing order tracking numbers

The tracking numbers and the URL from the Ship Via information produce a tracking URL that can be hyperlinked to allow tracking on the carrier's website. This URL displays within the pick/pack/ship functionality on the following forms and tabs:

- Customer Order Lines- shipping tab
- Order Shipment form
- Shipment Master form
- Packaging Detail tab
- Shipment Tracking form

The first tracking number in a shipment is the primary tracking number attached to the shipment. The primary tracking number also serves as the master tracking number by which any packages in the shipment can be tracked. Some carriers, such as UPS, attach tracking numbers to each package. The system displays package tracking numbers; however, only the master tracking number is required to track a shipment.

Check your understanding

What part of the Pick, Pack, and Ship process is optional?

- a) Every part is required
- b) Picking
- c) Packing
- d) Shipping

After you unship a shipment what are the other steps you still need to do?

- a) No other steps needed
- b) Unpick inventory, unpack inventory, delete pick list on pick workbench
- c) Unpack inventory, unpick inventory, delete pick list on pick maintenance
- d) Delete pick list on pick confirmation, unpack inventory, unpick inventory

Course summary

Estimated time

.5

Learning objectives

Now that you have completed this course, you should be able to:

- Describe the elements of the Quote To Cash business process
- Explain the Order Shipping process
- Describe the pick, pack, and ship process

Topics

- Course review

Course review

What is the shipping document that helps users identify the items, quantities, and stock locations of the items to be shipped on a customer order?

- a) Packing slip
- b) Pick list
- c) Order Verification Report
- d) Shipping Transaction form

Arrange the steps in the correct order for picking a customer order.

- a) Print the pick list _____
- b) Return any picked items back to inventory _____
- c) Record the picking results on the Pick Confirmation form _____
- d) Create a pick list from customer orders with a status of "Ordered" using the Pick Workbench form

What form is used to create pick lists from customer orders with a status of Ordered?

- a) Customer Orders form
- b) Customer Order Lines form
- c) Pick Maintenance form
- d) Pick Workbench form

Identify how you confirm a pick list on the Pick Confirmation form?

- a) Click the Confirm button
- b) Click the Generate button
- c) Click the Pick List button
- d) Click the Process button

Which of the following statements are true about using the Unpick Inventory form? Select all that apply.

- a) It is used to place picked items back into inventory.
- b) The Location field displays the location where the unpicked inventory is returned.
- c) The Process check box is used to select items to unpick.
- d) The Process button unpicks the selected lines when clicked.

Which of the following statements best describe how to use the Pack Workbench form? Select all that apply.

- a) If a shipment is built from a single pick list, you do not need to use the Pack Workbench form.
- b) The Pack Workbench form is used to record how items will be packed for a shipment
- c) The Orders tab on the Pack Workbench form displays customer orders for the customer for the pick list selected in the pick list grid.
- d) The Pick Lists tab on the Pack Workbench form displays other pick lists for the customer of the selected pick list with a status of "Opened."

Which of the following statements apply to the pack confirmation process? Select all that apply.

- a) Creation of packages is not required for shipments and the inventory can remain at the packing location.
- b) Pack confirmation is used to move inventory assigned to a shipment from the packing location to the shipping (or staging) location.
- c) The Pack Confirmation form is used to record how the items will be packed for a shipment.
- d) The Pack Confirmation form is used to group pick lists together into a shipment.

Which of the following statements completes this sentence?

The _____ form is used to create, update, and maintain a shipment.

- a) Pack Workbench
- b) Shipment
- c) Shipment Master
- d) Shipment Workbench

What is the only status that appears on the Ship Confirmation form?

- a) Confirmed
- b) Open
- c) Ready to Ship
- d) Shipped

Appendices

The following are included in this section:

- Appendix A: User accounts
- Appendix B: Reports and utilities
- Appendix C: Credit hold options
- Appendix D: Delivery orders
- Appendix E: Consolidated invoicing
- Appendix F: Practice scenarios

Appendix A: Check your understanding answers

This section provides the answers to the questions found at the end of each lesson.

Lesson 2: Sales Order to Shipping

What is the shipping document that itemizes in detail, the contents of a particular package for shipment to a customer?

- a) Pick List
- b) **Packing Slip**
- c) Order Verification Report
- d) Shipping Transactions

Under which of the following conditions does the system prevent you from shipping customer orders?

- a) The package carrier drivers are on union strike
- b) The ship to location for the delivery cannot be verified
- c) A packing slip for the order was not created
- d) **Either the customer account or the customer order has been placed on credit hold.**

Lesson 3: Pick, Pack, and Ship

What part of the Pick, Pack, and Ship process is optional?

- a) Every part is required
- b) Picking
- c) **Packing**
- d) Shipping

After you unship a shipment what are the other steps you still need to do?

- a) No other steps needed
- b) Unpick inventory, unpack inventory, delete pick list on pick workbench
- c) **Unpack inventory, unpick inventory, delete pick list on pick maintenance**
- d) Delete pick list on pick confirmation, unpack inventory, unpick inventory

Course Review

What is the shipping document that helps users identify the items, quantities, and stock locations of the items to be shipped on a customer order?

- a) Packing slip
- b) **Pick list**
- c) Order Verification Report
- d) Shipping Transaction form

Arrange the steps in the correct order for picking a customer order.

- a) Print the pick list 3
- b) Return any picked items back to inventory 4
- c) Record the picking results on the Pick Confirmation form 2
- d) Create a pick list from customer orders with a status of "Ordered" using the Pick Workbench form 1.

What form is used to create pick lists from customer orders with a status of Ordered?

- a) Customer Orders form
- b) Customer Order Lines form
- c) Pick Maintenance form
- d) **Pick Workbench form**

Identify how you confirm a pick list on the Pick Confirmation form?

- a) **Click the Complete button**
- b) Click the Generate button
- c) Click the Pick List button
- d) Click the Process button

Which of the following statements are true about using the Unpick Inventory form? Select all that apply.

- a) It is used to place picked items back into inventory.
- b) The Location field displays the location where the unpicked inventory is returned.
- c) The Process check box is used to select items to unpick.
- d) The Process button unpicks the selected lines when clicked.

Which of the following statements best describe how to use the Pack Workbench form? Select all that apply.

- a) If a shipment is built from a single pick list, you do not need to use the Pack Workbench form.
- b) The Pack Workbench form is used to record how items will be packed for a shipment
- c) The Orders tab on the Pack Workbench form displays customer orders for the customer for the pick list selected in the pick list grid.
- d) The Pack Workbench form displays other pick lists for the customer of the selected pick list with a status of "Opened."

Which of the following statements apply to the pack confirmation process? Select all that apply.

- a) Creation of packages is not required for shipments and the inventory can remain at the packing location.
- b) Pack confirmation is used to move inventory assigned to a shipment from the packing location to the shipping (or staging) location.
- c) The Pack Confirmation form is used to record how the items will be packed for a shipment.
- d) The Pack Confirmation form is used to group pick lists together into a shipment.

Which of the following statements completes this sentence?

The _____ form is used to create, update, and maintain a shipment.

- a) Pack Workbench
- b) Shipment

- c) Shipment Master
- d) Shipment Workbench

What is the only status that appears on the Ship Confirmation form?

- a) Confirmed
- b) Open
- c) Ready to Ship
- d) Shipped

Appendix B: Delivery orders

Delivery orders

The following processes are available through delivery orders (DOs):

- Bill of Lading
- Packing List
- Pro Forma Invoice
- Advance Ship Notice
- Generating an Electronic Data Interchange (EDI) Advance Ship Notice (ASN) for a Delivery Order for an EDI Customer

Delivery orders can be generated many ways and are comprised of three major forms:

Delivery Orders (header)

The **Delivery Orders** form provides for the creation, modification, and deletion of delivery order records. A delivery order can be associated with a customer ship-to address.

Delivery Order Lines (like a blanket order line concept)

The **Delivery Order Lines** form provides for the creation, modification, and deletion of delivery order line records.

Delivery order lines should be thought of as one delivery unit. This might be a truck, a container, or any other device capable of delivering product from one location to another.

Delivery Order Line Sequences (customer order [CO] ship records)

The **Delivery Order Line Sequence** form provides for the creation, modification, and deletion of delivery order line sequence records. A delivery order line sequence record must contain a reference or a "link" to a specific customer regular order line or customer blanket order line/release shipment record.

Delivery order line sequence records can only be created, updated, and deleted during or after the shipping process has been performed. During shipping, a specific pending ship transaction line might be tied to a delivery order and line. (Delivery order and delivery order line browse capability are provided during the data entry of the pending ship transaction.)

The delivery order must exist, otherwise the system generates an error. If a valid value is specified for the delivery order, then you may enter a valid line for the delivery order or leave it blank to allow the system to generate the next line for you. Upon posting the pending ship transaction and creating an order shipment record, the system creates a delivery order line sequence record containing a reference to the order shipment record.

For any given customer, one or more delivery orders may exist with one or more delivery order lines, each containing zero, one, or more delivery order line sequence records, each linked directly with a CO shipment record.

Delivery order invoicing options

There are several delivery invoicing options:

- Generating an invoice for a specific delivery order
- Generating an invoice for each customer purchase order linked to a delivery order

Note: All CO shipment records linked to the delivery order and associated with a specific customer purchase order via the customer order are invoiced together on one invoice.

- Consolidating multiple delivery orders onto one invoice

Note: All shipments associated with the delivery order are invoiced together; no partial invoicing of a delivery order's shipments may occur.

For the first two invoicing options, a delivery order is associated with the invoice header and displays along with the invoice number when selecting invoices to which payments are applied.

Delivery Orders form

The **Delivery Orders** form is used to create delivery order headers. The header defines the customer and ship-to address to which the lines and sequences are tied.

Cost Info tab

The **Cost Info** tab tracks the estimated and pre-paid costs for the delivery order.

Consignee tab

The **Consignee** tab identifies the name of the company that is to receive the freight. This will default from the customer master record and can be overridden at the delivery order (DO) header level.

Consignor

The **Consignor** tab identifies the company name and the address of the warehouse from where the goods are being shipped.

Invoicee tab

The Invoicee tab identifies the bill-to name and address for the delivery order. The bill-to information will default from the customer record for this customer and can be overridden.

The selection from the DO Invoice drop-down list identifies the type of invoice the delivery order uses. Options are Consolidated, Single, and Single by PO.

The selection from the Invoice Freq drop-down list identifies the frequency with which consolidated invoices will be generated. Options are Daily, Weekly, Bimonthly, Monthly, Other, and Hold.

Special tab

The Special tab allows you to enter up to two lines of special instructions for this bill. This text prints on the bill of lading.

The Physically Shipped? check box, when selected, time stamps the current date and time of the physical shipment. These times are generated from the system.

Consignor Contact tab

The Consignor Contact tab identifies the name of the primary contact person.

On the Delivery Orders - Invoicee tab, the customer contact entered on the Customers form is used by default if the Corporate Address field is selected.

Delivery Order Lines form

The Delivery Order Lines form is used to add lines to your delivery order. Each line represents a single container or package. All line records that have been created for this delivery order display in the browser at the bottom of the form and can be updated if the status remains In Process.

The following table describes the fields on the Delivery Order Lines form:

Field	Description
Rate Code field	The Rate Code field specifies the appropriate class/rate code for this DO/bill of lading (BOL) line item. This code is required to describe the rate classification of the shipped commodity.
NMFC (National Motor Freight Code) field	The NMFC field identifies the National Motor Freight Code.
Line Weight field	The Line Weight field specifies the cumulative weight for all of the sequences that comprise this line.

Delivery Order Line Sequences form

The Delivery Order Line Sequences form is used to add line sequences to your delivery order. Each line sequence represents a customer order line. All sequences that have been added to this delivery order display in the grid at the bottom of the form.

A customer order line cannot be added as a sequence until it has been shipped.

The DO line represents the method of shipment, such as a box or crate. The sequence represents the actual order and line that was shipped. Once the shipment is completed in either the Shipping Processing Orders or Order Shipping form, the sequence is created.

Order Shipping form

The **Order Shipping** form is used to enter shipping transactions and track shipped items by ship date. Before generating a regular invoice for an item or an order, you must ship that item or order. Once you ship an item, it will appear on the **To Be Invoiced** report.

This functionality is different from the picking, packing, and shipping functionality, and it is recommended that you either choose to use the picking, packing, and shipping functionality or use the standard shipping functionality (**Order Shipping** form). They were not designed to be used together. Even though the two are separate, there is some interaction. If you ship a quantity through the **Order Shipping** form or return a quantity through it, the Pick Workbench is aware of the process. If there is quantity in use through the picking, packing, and shipping process, the **Order Shipping** form is aware of the process.

Shipping Processing Orders form

The **Shipping Processing Orders** form allows you to process multiple orders automatically. The selection from the **DO/BOL** drop-down list on the **Shipping Processing Orders** form identifies a delivery

order number to assign to the current batch. Only delivery orders with a status of In Process appear in the drop-down list.

Shipping Processing Line Release form

The **Shipping Processing Line Release** form allows you to view the line/releases for a particular order so you can decide which line/releases you want to process with the batch of orders displayed on the **Shipping Processing Orders** form. The **DO Line** field on the **Shipping Processing Line Release** form specifies the DO Line where the shipment is posted.
