About this workbook

Welcome to this Infor Education course! We hope you will find this learning experience enjoyable and instructive. This Training Workbook is designed to support the following forms of learning:

- Classroom instructor-led training with an Infor certified instructor
- Virtual classroom instructor-led training with an Infor certified instructor
- Self-directed learning through Infor Campus

This Training Workbook is not intended for use as a product user guide.

Workbook design

This Training Workbook contains both conceptual information to introduce topics and step-by-step procedural instructions for practical application of those concepts.

Symbols and notes are provided throughout this Training Workbook for ease of reference. Refer to the *Symbols used in this workbook* section below to familiarize yourself with these symbols.

The PDF bookmarks pane provides quick and easy navigation between lessons, topics, and appendices, when needed.

Instructor-led training (ILT)

If you are taking this course as ILT, your instructor will provide details on accessing the Infor Education Training Environment needed to complete the student exercises. Your instructor will also assign you and other students an account login and password from Appendix A of this Training Workbook.

Some exercises in this workbook cannot be performed in the live Training Environment that is shared by multiple students during class. In these instances, a hyperlink to a recorded simulation is provided in the Training Workbook for your reference. Your instructor may also perform the exercises one time in the system on behalf of the class, if needed. Do not attempt to complete the steps for any of these demos in the system. Doing so could adversely affect the Training Environment, the intended flow of the course, and the success and quality of the course for all students in the class.

Self-directed learning (SDL)

Some SDL courses offer Lab on Demand in addition to simulations. If you are taking this course through Infor Campus as SDL, and the course offers Lab on Demand, refer to the Lab on Demand screen in the self-directed learning course for course environment information. The Lab on Demand screen includes instructions and logins to launch and access the corresponding Infor Education Training Environment as well as logins and passwords required for completion of course exercises and demos.

The exercises and demos in this course build upon each other as they prepare the system for subsequent exercises and demos. If you are taking this course as SDL with Lab on Demand, you must complete all of the exercises and demos in the order they are presented in the Training Workbook. This ensures you will achieve the expected results and a successful course outcome.

Instructor-recorded presentations and simulations (SDL only)

If you are taking this course as SDL, there may be instructor-recorded presentations and/or simulations available to assist you.

If instructor-recorded presentations are available, a hyperlink to the recording will be included on the first page of each corresponding lesson of the interactive workbook on the Training Workbook tab of the self-directed learning course.

If simulations are available, the demos and exercises throughout the interactive Training Workbook will include hyperlinks to simulations that allow you to view and/or practice the execution of the demo or exercise. These same simulations are also accessible via the Demonstrations tab of the self-directed learning course. Please note that the data used in some simulations may not exactly match the data provided in the Training Workbook.

Learning Libraries

Learning Libraries in Infor Campus include learning materials that are available to you online, anytime, anywhere. These materials can supplement instructor-led training, providing you with additional learning resources to support your day-to-day business tasks and activities.

Please note that if you accessed this Training Workbook directly via a Learning Library, you will not have access to the Infor Education Training Environment that is provided with all instructor-led and most self-directed learning course versions, as referenced above. Therefore, you will not be able to practice the exercises in the product-specific Training Environment for which the exercises in this Training Workbook were written.

Course overview

Estimated time

0.25 hours

Learning objectives

Upon completion of this course, you should be able to:

- Identify the main processes of Infor CloudSuite™ Industrial (SyteLine).
- Explain how to perform key sales management tasks in the Lead To Order business process.
- Explain how to complete the main sales order functions of the Quote To Cash business process.
- Explain the primary functions of the Design To Release business process.
- Explain the key vendor management tasks in the Procure To Pay business process.
- Explain how to use Advanced Planning and Scheduling (APS) in the Plan To Inventory business process.
- Identify the steps in the Demand To Build business process.
- Describe the primary financial management functions in the Financial Plan To Report business process.

Topics

- Course description and agenda

Course description and agenda

This course introduces the fundamentals of Infor SyteLine®. It covers manufacturing, planning, purchase to pay, order to cash, and financial reporting processes as defined in the CloudSuite Industrial End To End Business Processes. In this course you will enter all required logistical, manufacturing, accounting, and financial data to create a fitness tracking Smartwatch into the company's enterprise resource planning (ERP) system, SyteLine. This training is for version 10 and all previous versions.

Course duration

8 hours

Prerequisite courses

- CloudSuite Industrial: Navigating the User Interface

Prerequisite knowledge

To optimize your learning experience, Infor recommends that you have the following knowledge prior to taking this course:

- Knowledge of how data is structured and organized
- Ability to navigate the user interface

Audience

- Customer user
- Pre-sales consultant
- Business consultant
- Technical consultant
- Support
- System administrator

System requirements

- SyteLine Training Environment

Reference materials

SyteLine reference materials are available from the following locations:

- SyteLine Help menu
- Infor Concierge®

Course agenda

The agenda below details the contents of this course, including lesson-level learning objectives and supporting objectives.

Lesson	Lesson title	Learning objectives	Estimated time (hours)
Course overview		Review course expectations.	0.25
1	Process overview	Identify the main processes of Infor CloudSuite™ Industrial (SyteLine). - Identify the end-to-end business processes for CloudSuite Industrial. - Identify the primary types of data used in Infor SyteLine.	0.50
2	Lead to Order	Explain how to perform key sales management tasks in the Lead to Order business process. - Identify the components of the Lead to Order business process. - List the steps to create a new marketing or sales campaign. - Explain the flow between new lead, new prospect, new customer, and new opportunity.	0.75
3	Quote to Cash	Explain how to complete the main sales order functions of the Quote to Cash business process. - Identify the components of the Quote to Cash business process. - Identify key elements of setting up a customer. - Describe the flow from estimate to sales order.	1.0
4	Design to Release	Explain the primary functions of the Design to Release business process. - Identify the components of the Design to Release business process. - Explain how to define the components of the bill of materials (BOM). - List the steps to create a new BOM.	1.0
5	Procure to Pay	Explain the key vendor management tasks in the Procure to Pay business process.	1.0

Lesson	Lesson title	Learning objectives	Estimated time (hours)
		- Identify the components of the Procure to Pay business process. - Explain how to create a purchase order (PO) for items not used in the manufacturing process. - Describe user limits for requisition approvals. - Explain how to complete a PO from the work bench. - Describe the impact of a shrink factor on material quantities. - Explain how to receive a PO order. - Identify resources for reviewing the system impact of Procure to Pay business process.	
6	Plan to Inventory	Explain how to use Advanced Planning and Scheduling (APS) in the Plan to Inventory business process. - Identify the components of the Plan to Inventory business process. - Identify system planning engine options. - Describe the benefits of using the Material Planner Workbench. - Explain how to create the workbench from planning output.	1.0
7	Demand to Build	Identify the steps in the Demand to Build business process. - Identify the components of the Demand to Build business process. - Identify the two different Plan to Schedule processes. - Describe the flow of completing jobs. - Describe customer order shipping. - Identify resources to review the system impacts of Demand to Build business processes.	1.0

Lesson	Lesson title	Learning objectives	Estimated time (hours)
8	Financial Plan to Report	Describe the primary financial management functions in the Financial Plan to Report business process. - Identify the components of the Financial Plan to Report business process. - Describe the flow of creating and processing customer invoices and payments. - Describe the flow of creating, processing, and paying vendor POs. - Describe how to enter and post journal entries. - Identify resources to review the system impacts of the Financial Plan to Report business process.	1.0
Course summary		Debrief course.	0.50

Appendices

This section contains information that is not part of the instructional content of this course, but it provides additional related reference information.

Appendix	Appendix title	Content description
Appendix A	User accounts	This appendix is a reference for student and instructor login credentials and if applicable, assigned exercise data.
Appendix B	Check your understanding answers	This appendix provides answers to the check your understanding questions found at the end of each lesson.

Lesson 1: Process overview

Estimated time

.50 hours

Learning objectives

After completing this lesson, you will be able to identify the main processes of Infor CloudSuite™ Industrial (SyteLine). In this lesson, you will:

- Identify the end-to-end business processes for CloudSuite Industrial.
- Identify the primary types of data used in SyteLine.

Topics

- Introduction to CloudSuite Industrial End to End Business Processes
- End To End Business Processes overview
- Course scenario

Introduction to CloudSuite Industrial End To End Business Processes

The End To End Business Processes shown below are a set of preconfigured yet flexible solutions for Infor CloudSuite™ applications. These processes (also referred to as “business processes” in this course) deliver industry-specific best practice content, including pre-defined menus, processes, and structures. Using end to end business processes for a new product deployment can result in faster time to value, lower cost, and reduced risk.

These are included as part of an Infor software as a service (SaaS) subscription. They are optional for on-premises installations. Please contact your Infor sales representative for more information about accessing the End To End Business Processes for CloudSuite Industrial.

Note: The organization of this course reflects the end to end business processes defined, but access to the business processes is not required to successfully complete this course.

End To End Business Processes

CloudSuite Industrial End To End Business Process diagram

Each business process is designed around the end to end business processes utilized by most organizations. For CloudSuite Industrial, these processes include:

- Quote To Cash
- Lead To Order
- Procure To Pay
- Plan To Inventory
- Design To Release
- Demand To Build
- Inspect To Correct
- Service To Cash
- Service Contract To Cash
- Project To Profit
- Hire To Retire
- Financial Plan To Report
- Multi-Site Operations and Finance

This course will introduce key elements and tasks involved in each of the processes outlined on the diagram.

End To End Business Processes overview

You will use a new product scenario to illustrate how SyteLine supports the entire manufacturing process, from new product marketing, creation of the Bill of Material (BOM), processing jobs, and finish with the accounting flow. The following end-to-end business processes will be used.

Lead To Order

Our course scenario begins with the Lead To Order process, which supports the customer relationship management function. Functions covered in the course include:

- Campaign To ROI
- Lead To Opportunity
- Prospect To Customer

Lead To Order business process diagram

In the business scenario used in this course, you will create a new product introduction campaign for a fitness tracker Smartwatch. You will then create a new lead, prospect, and opportunity from that campaign.

Quote To Cash

Next is the Quote To Cash process. This follows the sales and order functions, from sending a customer quote to obtaining an order, shipping and invoicing the order, and receiving payment. Functions covered in the course include:

- Quote To Sales Order
- Sales Order To Shipping (covered in the Demand To Build business process)
- Shipping To Invoice (covered in the Financial Plan To Report business process)
- Invoice To Cash (covered in the Financial Plan To Report business process)

Quote To Cash business process diagram

Using the Smartwatch scenario, you will create an estimate from your opportunity, convert that estimate to a sales order, set up items, add customers, and create a new customer order.

Design To Release

The Design To Release process supports product design and the manufacturing bill of material for the product. This course covers this function:

- Design To BOM/Routing

Design To Release business process diagram

For the course scenario, you will set up a BOM, including creating resources and resource groups, work centers, current operations, current materials, and employees.

Procure To Pay

The next process is Procure To Pay, where items used in manufacturing and assembly are purchased from vendors. This course covers the following functions:

- Requisition To PO
- PO To Receipt
- Receipt To Payment (covered in the Financial Plan To Report business process)

Procure To Pay business process diagram

Procure To Pay tasks illustrated in the Smartwatch scenario include creating purchase requisitions and POs, adding vendors and vendor contracts, and receiving POs.

Plan To Inventory

The Plan To Inventory process uses the Advanced Planning and Scheduling (APS) module to identify the materials required to fulfill orders, when the materials are needed, and when to release orders. Functions covered in this course include:

- Plan To Replenish

Plan To Inventory business process diagram

This course uses APS to plan jobs. For the Smartwatch scenario, you will run APS and then use the Material Planner Workbench to generate jobs.

Demand To Build

The Demand To Build process focuses on the assembly or manufacturing of materials into a finished good to meet customer orders (demand). Manufacturing jobs are released to the shop floor, resources are scheduled, and manufacturing processes are completed. This course covers the following functions:

- Plan To Schedule
- Schedule To Build

Demand To Build business process diagram

Tasks illustrated through the Smartwatch scenario include releasing jobs, issuing materials and recording labor for jobs, posting job transactions, and shipping customer orders.

Financial Plan To Report

The Financial Plan To Report process encompasses the organization's finance and accounting functions. Most activities performed in the prior processes affect the financial records in some fashion. This course introduces several functions within this business process:

- Invoice To Cash
- Receipt To Payment
- G/L Processing

Financial Plan To Report business process diagram

For the Smartwatch scenario, you will process customer invoices and payments and vendor invoices and payments. You will also create general journal entries and post distribution journals to the general ledger.

Course scenario

In this course, a specific business scenario will be used to illustrate fundamental concepts and tasks. To simulate an actual environment, basic data such as customers, items, vendors, and work centers have been provided for our demonstration corporation, Progressive Cycles.

Scenario summary

Progressive Cycles is constantly adding new products. In addition to manufacturing bicycles, the CEO has decided to move the company into the fitness tracker business.

You've been assigned the task of entering all required logistical, manufacturing, accounting, and financial data to create a fitness tracking Smartwatch into the company's enterprise resource planning (ERP) system, Syteline.

When setting up the new Smartwatch product, you will need to consider the following:

- Demand
- Product components
- Logistical data (customers and vendors)
- Operational data (items, work centers, resource groups, and production employees)
- BOM
- Accounting data

Demand

Demand for the new product comes from a variety of sources as described in the Lead to Order and Quote to Cash business processes. In this course, you will create a new marketing campaign to generate interest in the Smartwatch, and follow that through with a new lead, prospect, opportunity, customer, and sales order.

Product components

The Smartwatch product will be manufactured by Progressive Cycles using a combination of the following purchased parts and materials:

- Smartwatch LCD face
- Watchstrap
- Watch battery

Smartwatch components

Logistical data (customers, vendors)

Certain logistical information is required to complete sales orders and jobs. In this course, you will create new customer records along with new vendor and vendor contract records.

Operational data (items, resources, resource groups, work centers, production employees)

There is also a great deal of operational data in SyteLine that supports the manufacturing process. This includes:

- **Items:** Items include all products bought, manufactured, and sold. Finished good, sub-assemblies, raw materials, tooling, fixtures, and even outside services should have item records.
- **Resources and resource groups:** A resource is an entity, such as crewperson, machine, or fixture that can perform a production activity. A resource group is a set of similar resources used in a production operation.
- **Work centers:** Work centers are used to track the costs that production activities generate.
- **Employees:** The employees' records include identifying information about each employee along with pay and shift information. This data is used to generate labor costs for production activities.

In this course, you will set up new records for each of these types of data in order to create the new Smartwatch product.

Bill of materials (BOM)

The Demand to Build business process includes the steps to identify and purchase or produce product inputs, and then to manufacture or assemble the finished goods and ship them to customers. In SyteLine, key components of this process include:

- BOM
- Job orders

The BOM is a comprehensive list of raw materials, components and assemblies required to build or manufacture a product. A BOM is usually in a hierarchical format, with the topmost level showing the end product, and the bottom level displaying individual components and materials.

The Smartwatch BOM is depicted in the following diagram:

Smartwatch BOM diagram

In order to manufacture anything, you need instructions. The instructions are broken down into routing and a BOM. A routing is a group of operations, or steps that must be performed to assemble an item.

Before generating a BOM or job order, you must set up two additional types of manufacturing data:

- **Current operations:** The Current Operations form defines the list of resources and time required to perform a step, or operation, of the manufacturing process for an item. Current Operations also defines routing and costs for the item.
- **Current materials:** The Current Materials form specifies the materials used for an operation.

In this course, you will create BOMs and job orders for the Smartwatch product, including all supporting components. You will also plan the shop floor requirements for completing jobs.

Accounting data

SyteLine includes finance and accounting functions. Accounting data is set up during the initial deployment of the system.

Transactional data for an organization is captured in the general ledger, which is tied to other portions of the system through distribution journals and the chart of accounts.

The chart of accounts defines account numbers utilized throughout the system to record and track transactional activity.

Transactional data captured through day-to-day operations is posted to distribution journals which are in turn posted to the general ledger.

In this course you will assign preestablished general ledger account numbers to several different operations. You will also perform manual journal entries.

Scenario preparation

Before you get started with the course scenario, several SyteLine accounting settings must be verified or updated. In the following exercises you will review or adjust the fiscal year and accounting period.

Exercise 1.1: Verify fiscal year and accounting period

In this exercise, you will verify or update the fiscal year and accounting period.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Verify general parameters

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *general parameters* in the **Filter** field.
3. Click the **General Parameters** list item.
4. Click the **OK** button. The **General Parameters** form opens.
5. Click the **General** tab.
6. Verify that the **Current Fiscal Year** field displays the current year. If not, follow these steps:

- a. Click the **Current Fiscal Year** drop-down arrow.
- b. Click the **[current year]** list item.
- c. Click the **Save** icon on the toolbar. A dialog box opens with the message, "General Parameters have changed. [Login] must be performed."
- d. Click the **OK** button.

Note: It is not necessary to log in again for purposes of this course.

7. Click the **X** on the **General Parameters** form to close.

Part 2: Verify accounting periods

1. Click the **Open** icon on the toolbar.
2. Type *accounting periods* in the **Filter** field.
3. Click the **web.AccountingPeriods** list item.
4. Click the **OK** button. The **Accounting Periods** form opens.
5. Click the **slider**.
6. Click the **[current year]** in the **Fiscal Year** column in the grid.
7. Verify that the **Current Period** field displays the current month. If not, follow these steps:
 - a. Click the **Current Period** drop-down arrow.
 - b. Click the **[current month]** list item.
 - c. Click the **Save** icon.
8. Click the **X** on the **Accounting Periods** form.

Check your understanding

Which of the following solutions includes industry specific predefined menus, process, and structures?

- a) Infor Ming.le™
- b) End to End Business Process
- c) Dashboards
- d) Home pages

Which two of the following are examples of a CloudSuite Industrial end-to-end business process?

- a) Pay To Procure
- b) Lead To Order
- c) Plan To Inventory
- d) Build To Demand

In this course your company will build a Smartwatch. Which item below is the manufactured item?

- a) Face of Smartwatch
- b) Battery
- c) Watchstrap
- d) Smartwatch

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 2: Lead To Order

Estimated time

.75 hours

Learning objectives

After completing this lesson, you will be able to explain how to perform key sales management tasks in the Lead To Order business process. In this lesson, you will:

- Identify the components of the Lead To Order business process.
- Explain the flow between a new lead, new prospect, new customer, and new opportunity.

Topics

- Lead To Order business process overview
- Campaign To ROI process
- Lead To Opportunity process
- Prospect To Customer process

Lead To Order business process overview

The Lead To Order business process supports the customer relationship management (CRM) function within an organization. This is a method for managing the entire sales process, including creating a sales campaign, lead generation, sales opportunity tracking, converting prospects to customers, and converting an opportunity to a customer order.

The lead to order processes for CRM provide a link between the sales and marketing department (front end of the business) and the operations departments (back end of the business). The goal is to streamline the sales and customer service processes to generate revenue.

Lead To Order business process diagram

There are four main components of the Lead To Order business process, as shown in the diagram above. This lesson introduces and illustrates the components outlined on the diagram.

Note: The **Opportunity To Sales Order** component is introduced with the Quote To Cash business process.

Key capabilities

CRM allows you to manage your marketing campaigns, leads, opportunities, and sales contacts to:

- Track all elements of a marketing or sales campaign, including its effectiveness
- Create leads for prospects and customers from initial interest through order placement
- Convert a prospect to a customer
- Create opportunities to track estimate orders assigned to prospects or customers
- Manage all tasks associated with an opportunity
- Maintain sales contacts including territory information, company revenue and number of employees for each customer
- Cross-reference your sales contacts with customers and prospects
- Create and manage sales contact communications and interactions

Campaign To ROI process

Often, the Lead To Order process starts with a new marketing campaign. The marketing group in the organization can track all elements of a marketing or sales campaign, including its effectiveness, using the Campaigns form in SyteLine.

The campaign's return on investment (ROI) is estimated by evaluating the cost versus targeted revenue. The effectiveness is calculated by measuring actual revenue versus estimated. Actual revenue is captured by linking the leads and opportunities to the campaign.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercise which follows.

Campaign To ROI business process diagram

Campaign steps usually include the following:

- The new campaign is created using the Campaigns form, where you enter the campaign description, type, status, cost, start and end dates. Expected revenue and leads can also be captured.
- Sales contacts can be associated with the campaign record.
- Campaign communications can be sent to the sales contacts. These communications are logged on the both the campaign record and the sales contact record.

Scenario: New product introduction

The first step in our new product scenario is to create a marketing campaign to introduce the Smartwatch. SyteLine provides a number of tools for generating, managing, and tracking marketing campaigns. Several of these capabilities will be illustrated in the exercises that follow.

Exercise 2.1: Create new product introduction campaign

In this exercise, you will create a new campaign for a new product introduction.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *campaigns* in the **Filter** field.
3. Click the **web.Campaigns** list item.
4. Click the **OK** button. The **Campaigns** form opens.
5. Click the **New** icon on the toolbar.
6. Type *[your initials]?* in the **Campaign** field.
7. Type *Kickoff for Smartwatch* in the **Description** field.
8. Click the **Type** drop-down arrow.
9. Click the **NewProd** list item.
10. Click the **Status** drop-down arrow.
11. Click the **Active** list item.
12. Click the **Save** icon. Your **Campaign number** now displays in the **Campaign** field.
13. Write down your **Campaign number** for use in future exercises: _____.
14. Click the **X** on the **Campaigns** form.

Lead To Opportunity process

The Lead To Opportunity process includes the functions required to identify and track sales leads, and to develop those leads into sales opportunities.

Leads are those prospects or customers that fit your organization's qualifying criteria. The sales and marketing department will typically define qualifying criteria such as territory, company size, market, etc. The goal is to interact with the sales contact at the lead to evaluate requirements and establish a business relationship. The desired outcome is a sales opportunity that can be responded to by a quote or estimate.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Lead To Opportunity business process diagram

The process of developing and managing leads typically includes the following steps:

- A new lead is recorded on the Leads form, which includes information about the lead status, quality, and source, along with information about any related campaign.
- A salesperson is assigned to the lead.
- Leads can be associated with either a prospect or an existing customer.
- Interactions between the salesperson and the sales contact at the prospect or customer are logged in the system.
- The salesperson's goal is to develop this lead into an opportunity, which can be captured by the system.
 - In order to convert a lead to an opportunity, the lead must have a customer or prospect assigned.

Scenario: Creating leads, prospects, and opportunities

When a new lead or prospect is identified, whether from a marketing campaign or another source, information about the lead or prospect is captured in SyteLine. This allows the sales team to follow up, with the goal of converting this new lead or prospect into a sales opportunity.

In the following exercises you will create a new lead, prospect, and opportunity from the Smartwatch introduction campaign established previously.

Exercise 2.2: Create a new lead

In this exercise, you will create a new lead and associate it with the campaign created in Exercise 2.1.

Before you begin:

- Ensure you have completed Exercise 2.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *leads* in the **Filter** field.
3. Click the **web.Leads** list item.
4. Click the **OK** button. The **Leads** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Lead** field.
7. Type *New product launch* in the **Description** field.
8. Click the **Source** drop-down arrow.
9. Click the **Campaign** list item.
10. Click the **Status** drop-down arrow.
11. Click the **New** list item.
12. Click the **Save** icon. Your **Lead number** now displays in the **Lead** field.
13. Write down your **Lead number** for use in future exercises: _____.
14. Click the **X** on the **Leads** form.

Exercise 2.3: Create a new prospect

In this exercise, you will create a new prospect.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *prospects* in the **Filter** field.
3. Click the **web.Prospect**s list item.
4. Click the **OK** button. The **Prospect**s form opens.
5. Click the **New** icon.
6. Leave the **Prospect** field blank.

Note: The system will automatically assign the next sequential number when you save the record.

7. Type *Fitness R Us* in the **Company** field.
8. Type *456 Main Street* in the **Address 1** field.
9. Type *Columbus* in the **City** field.
10. Click the **Prov/State** drop-down arrow.
11. Click the **OH** list item.
12. Type *43004* in the **Postal/Zip** field.
13. Click the **Save** icon. Your **Prospect number** now displays in the **Prospect** field.
14. Write down your **Prospect number** for use in future exercises: _____.
15. Click the **X** on the **Prospect**s form.

Exercise 2.4: Create a new opportunity

In this exercise, you will create a new opportunity and associate it with the previously created prospect and campaign.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *opportunities* in the **Filter** field.
3. Click the **web.Opportunities** list item.
4. Click the **OK** button. The **Opportunities** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Opportunity** field.
7. Type *Smartwatch* in the blank field next to the **Opportunity** field.
8. Click the **Prospect** drop-down arrow.
9. Click the **[your Prospect number]** list item. **Note:** This is the same as the Prospect number you created in Exercise 2.3.
10. Click the **Status** drop-down arrow.
11. Click the **New** list item.
12. Click the **Campaign** drop-down arrow.
13. Click the **[your Campaign number]** list item.
14. Click the **Save** icon. Your **Opportunity number** now displays in the **Opportunity** field.
15. Write down your **Opportunity number** for use in future exercises: _____.
16. Click the **X** on the **Opportunities** form.

Prospect To Customer process

Prospects can be generated in a variety of ways in addition to a marketing campaign, and entered into SyteLine through the Prospects form as illustrated previously. The Prospect To Customer process allows you to convert an existing prospect to a customer. The customer attributes are identified based on information from the sales and accounting departments, and are recorded on the Customers form.

Process description

The overall business process is shown in the diagram below. The item outlined will be illustrated in the exercise which follows.

Prospect To Customer business process diagram

The Prospect To Customer process begins when an opportunity is won, and a customer order is received from the prospect. Follow-up steps usually include the following:

- Before the prospect is converted into a customer, a credit check is conducted to verify that the prospect meets the organization's requirements.
- Next, the prospect is converted to a customer by running the Move to Customer utility.
- Then the resulting new customer record is updated with credit limit, payment terms and contact information. The customer order can now be entered.

Scenario: Converting a prospect to a customer

When a prospect has been successfully developed into a customer, the existing prospect record can be converted to a customer record. In the following exercise you will convert your Smartwatch prospect to a customer.

Exercise 2.5: Convert prospect to customer

In this exercise, you will convert your new prospect to a new customer.

Before you begin:

- Ensure you have completed Exercise 2.3 and 2.4 because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.

2. Type *prospects* in the **Filter** field.
3. Click the **web.Prospects** list item.
4. Click the **OK** button. The **Prospects** form opens.
5. Click the **[your Prospect number]** row in the slider grid.
Note: This is the same as the Prospect number you created in Exercise 2.3.
6. Verify the **Pin Accordion Menu** icon is pinned.
7. Click the **External** menu.
8. Click the **Move to Customer** menu item. The **Move Prospect to Customer (Modal)** form opens.
9. Type *[your initials]?* in the **New Customer** field.
10. Click the **Bank Code** drop-down arrow.
11. Click the **BK1** list item.
12. Click the **Process** button. A dialog box opens with the message, "[Move Prospect to Customer] will be performed."
13. Click the **OK** button. A dialog box opens with the message, "[Process] was successful for Customer that has [Customer: XX]."
14. Click the **OK** button.
15. Click the **X** on the **Prospects** form.

Note: Once the prospect has been converted to a customer, the prospect record is deleted and is no longer displayed in the Prospects form.

Check your understanding

What is one of the components of the Lead To Order business process?

- a) Prospect To Customer
- b) Opportunity To Lead
- c) Customer To Prospect
- d) Sales Order To Opportunity

What must be assigned on the Lead form in order to convert it to an opportunity?

- a) Prospect or customer
- b) Sales contact
- c) Task
- d) Campaign

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 3: Quote To Cash

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to explain how to complete the main sales order functions of the Quote To Cash business process. In this lesson, you will:

- Identify the components of the Quote To Cash business process.
- Identify key elements of setting up a customer record.
- Describe the flow from estimate to sales order.

Topics

- Quote To Cash business process overview
- Quote To Sales Order process
- Sales Order To Shipping process
- Shipping To Invoice process
- Invoice To Cash process
- Return To Credit process

Quote To Cash business process overview

The Quote To Cash business process helps organizations manage their sales activities. This business process encompasses all the activities starting from submitting quotes to a customer, winning the order, shipping the items and finally invoicing and collecting payments. For customers using CRM, the Lead To Opportunity process feeds into the Quote To Cash process.

Quote To Cash business process diagram

There are five main components of the Quote To Cash business process, as shown in the diagram above. This lesson focuses on the Quote To Sales Order component, outlined on the diagram.

Key capabilities

The Quote To Cash business process is supported by a variety of functions within Syteline to:

- Track opportunities
- Record order shipments
- Invoice and collect payments
- Manage credit returns

Related courses

For more information about the Quote To Cash processes and associated tasks, please refer to the courses **CloudSuite Industrial: Using Customer Service/Order Entry** and **Syteline: Using Advanced Order Entry**.

Quote To Sales Order process

The Quote To Sales Order process starts with an opportunity, which allows you to create and track sales opportunities for prospects or customers. Opportunities can be generated in the Lead To Order process, or directly in the Quote To Sales Order process.

The Opportunities form can be updated with the estimated value of the opportunity, the reason it was won or lost, and be used to view any estimate orders associated with the opportunity. This is useful for tracking the progress of the potential sale.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Quote To Sales Order business process diagram

An opportunity is an event with associated tasks for a prospect or customer. The process of developing an opportunity into a sales order usually includes the following steps:

- When an opportunity is identified, a new record is added on the Opportunities form. The opportunity can be linked to an existing lead.
- A prospect or customer is associated to the opportunity.
- A salesperson and a sales contact from the prospect or customer can also be assigned to the opportunity.
- Follow-up tasks can be recorded and tracked.
- An estimate is created and linked to the opportunity record.
 - Estimate lines are created for each item that is being quoted, including quantity, price, and due date.
- A quote is generated using the Estimate Response Form Report and sent to the prospect or customer.

- Once the prospect or customer is satisfied with the quote, the opportunity is awarded.
 - If the won opportunity is for a prospect, that prospect must be converted into a customer.
- The estimate order is converted into a customer order.

Scenario: Managing opportunities

There are a variety of tools provided within Infor SyteLine to support the Quote to Sales Order process. A key element is managing recorded opportunities. In the next exercise, you will assign a task to your existing opportunity to illustrate the process of keeping opportunities on track.

Exercise 3.1: Assign task to opportunity

In this exercise, you will assign a campaign-related task to the opportunity you created in exercise 2.4.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Sentence case using Demo/exercise parts heading

1. Click the **Open** icon on the toolbar.
2. Type *opportunities* in the **Filter** field.
3. Click the **web.Opportunities** list item.
4. Click the **OK** button. The **Opportunities** form opens.
5. Click the **[your Opportunity number]** row in the slider grid.

Note: This is the same as the Opportunity number you created in Exercise 2.4.

6. Click the **Tasks** button. The **Opportunity Tasks (Linked)** form opens.
7. Type *Phone meeting* in the **Task Description** field.
8. Click the **Task Type** drop-down arrow.
9. Click the **Phone** list item.
10. Click the **Save** icon.
11. Click the **X** on the **Opportunity Tasks (Linked)** form.
12. Click the **X** on the **Opportunities** form.

Scenario: Creating estimates

At times, the sales team will need to create a detailed estimate while working on a sales opportunity. This provides a breakdown to the customer of the costs and delivery times of the goods or services to be provided. Each estimate includes one or more estimate lines, which specify the item and quantity being quoted.

Estimates can be created directly on the Estimates form or generated from an existing opportunity. In the next exercise you will create an estimate from your Progressive Cycles Smartwatch opportunity. You will also create the item record for the new Smartwatch product, since this is required to complete the estimate.

Exercise 3.2: Create an estimate with a new item from the opportunity

In this exercise, you will create an estimate from the previously created opportunity. As part of this exercise, you will also create a new item from the Estimate Lines form.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create an estimate from your opportunity

1. Click the **Open** icon on the toolbar.
2. Type *opportunities* in the **Filter** field.
3. Click the **web.Opportunities** list item.
4. Click the **OK** button. The **Opportunities** form opens.
5. Click the **Filter in Place** icon.
6. Click the **Campaign** drop-down arrow.
7. Click the **[your Campaign number]** list item. **Note:** This is the Campaign you created in Exercise 2.1.
8. Click the **Filter in Place** icon.
9. Click the **Estimates** button. The **Estimates (Linked)** form opens.
10. Leave the **Estimate** field blank.

Note: The system will automatically assign the next sequential number when you save the record.

11. Click the **Save** icon. Your estimate number now displays in the **Estimate** field.
12. Write down the **Estimate** number for future exercises: _____.

Part 2: Add item data from estimate line

1. Click the **Estimate Lines** menu item. The **Estimate Lines (Linked)** form opens.
2. Right-click the **Item** field. A menu displays.
3. Click the **Add** menu item. The **Items (Modal)** form opens.
4. Type *[your initials]-FG-01* in the **Item** field.

Note: The item number will be referenced throughout the system to identify the items being ordered, counted, planned, shipped, received, referenced, and so on.

5. Type *Smartwatch* in the **Description** field.
6. Click the **U/M** drop-down arrow.
7. Click the **EA** list item.
8. Verify the **Type** field displays **Material**. If not, follow these steps:
 - a. Click the **Type** drop-down arrow.
 - b. Click the **Material** list item.
9. Verify the **Source** field displays **Manufactured**. If not, follow these steps:
 - a. Click the **Source** drop-down arrow.
 - b. Click the **Manufactured** list item.
10. Click the **Product Code** drop-down arrow.
11. Click the **FG-100** list item.
12. Click to select the **Stocked** check box.

Note: If you are using APS or MRP most items will be flagged as **Stocked**.

13. Click the **Controls** menu item.
14. Click to select the **Lot Track** check box.
15. Click the **Save** icon.

Part 3: Complete the estimate line

1. Click the **X** on the **Items (Modal)** form to close. A dialog box opens with the message, "Do you want to return *[your initials]-FG-01* for Add for Item to form Estimate Lines?"
2. Click the **Yes** button. A dialog box opens with the message, "Not one Item Price exists for Item that has [Item: *[your initials]-FG-01*] and [Site: DALS]."
3. Click the **OK** button. The **Items (Modal)** form closes and the **Estimate Lines (Linked)** form displays.

Note: Your new item displays in the **Item** field.

4. Type *1* in the **Qty Ordered** field.

5. Type 300 in the **Unit Price** field.
6. Click the **Save** icon.
7. Click the **X** on the **Estimate Lines (Linked)** form. You are return to the **Estimates (Linked)** form.

Part 4: Review estimate quote

1. Click the **Estimate Response Form Report** menu item. The **Estimate Response Form Report** form opens with your estimate number in the Starting and Ending Estimate fields.
2. Click the **Preview** button. The **Quotation** generated by the **Estimate Response Form Report** opens in a new tab.
Review the quotation.
3. Click the **X** on the report tab to close.
4. Click the **Window** drop-down arrow on the **menu bar**.
5. Click the **Close All** menu item.

Scenario: Creating operational data (items)

Since the Smartwatch fitness tracker is a new product, operational data about the product and its components must be added to SyteLine before it can used in any customer order information. In the next exercise you will set up the item records needed for the new product.

The Items form is used to maintain a list of all items bought, manufactured, and sold. Finished goods, sub-assemblies, raw materials, tooling, fixtures, and even outside services should have item records.

In the prior exercise you created the item record for the Smartwatch finished product. In the following exercise, you will set up the purchased material item records for the materials needed for the new product:

- Face of Smartwatch, LCD (purchased material)
- Watchstrap (purchased material)
- Watch battery (purchased material).

Ensure you enter the item costs correctly as these will affect everything throughout the rest of this course.

Exercise 3.3: Set up new items

In this exercise, you will create several new items, assign planner codes, and add item costs.

Note: Often finished goods items are created directly, using the steps in this exercise. In our scenario, you have already created the Smartwatch item record as part of creating the customer estimate. Therefore, in this exercise you will be adding item records only for purchased materials to be used in the Smartwatch assembly.

Before you begin:

- Ensure you have completed Exercise 3.2 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create first new item

1. Click the **Open** icon on the toolbar.
2. Type *items* in the **Filter** field.
3. Click the **web.Items** list item.
4. Click the **OK** button. The **Items** form opens.
5. Click the **New** icon.
6. Type *[your initials]-PP-01* in the **Item** field.
7. Type *Face of Smartwatch, LCD* in **Description** field.
8. Click the **U/M** drop-down arrow.
9. Click the **EA** list item.
10. Verify the **Type** field displays **Material**. If not, follow these steps:
 - a. Click the **Type** drop-down arrow.
 - b. Click the **Material** list item.
11. Click the **Source** drop-down arrow.
12. Click the **Purchased** list item.
13. Click the **Product Code** drop-down arrow.
14. Click the **PP** list item.
15. Click to select the **Stocked** check box.

Part 2: Create additional items

1. Repeat steps **5-15** in **Part 1** using the information in the table below to create two additional new items.

Field	Item 2 Value	Item 3 Value
Item	[your initials]-PP-02	[your initials]-PP-03
Description	Watchstrap	Watch Battery
U/M	FT	EA

Field	Item 2 Value	Item 3 Value
Type	Material	Material
Source	Purchased	Purchased
Product Code	PP	PP
Stocked	Selected	Selected

- Click the **Save** icon.

Part 3: Add the planner code

- Click the **Filter in Place** icon.
- Type *[your initials]** in the **Item** field.
- Click the **Filter in Place** icon. All the item records you entered in Exercise 3.2 and Part 2 of this exercise display in the grid.
- Click the item **[your initials]-FG-01** in the grid.
- Click the **Planning** menu item.
- Type *[your initials]* in the **Planner Code** field.
- Repeat steps 4-6 for the items **[your initials]-PP-01**, **[your initials]-PP-02** and **[your initials]-PP-03**.
- Click the **Save** icon.

Part 4: Add Item Costs

- Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
- Type *item costs* in the **Filter** field.
- Click the **web.ItemCosts** list item.
- Click the **OK** button. The **Item Costs** form opens.
- Click the **Filter in Place** icon.
- Type *[your initials]** in the **Item** field.
- Click the **Filter in Place** icon. All the item records you entered previously display in the grid.
- Click the item **[your initials]-PP-01** in the grid.
- Click the **Cost Maint** menu item.
- Type *15.00* in the **Material Cost** field.
- Click the **Material** field under **Purchased Current Unit Cost**.
- Type *15.00* in the field.
- Repeat steps 8-12 using the information in the table below to update each of the other purchased material items you created.

Field	Value	Value
Item	[your initials]-PP-02	[your initials]-PP-03
Material Cost	2.00	7.00
Purchased Current Unit Cost - Material	2.00	7.00

14. Click the **Save** icon.
15. Click the **Window** drop-down arrow in the **Menu** bar.
16. Click the **Close All** menu item.

Scenario: Creating logistical data (customers)

While new customer data can flow through the CRM functions described in the Lead to Order business process, it is also common for new customer data to be entered directly into SyteLine. For instance, a new customer might have read about the Progressive Cycle Smartwatch product in the media and contact the company directly to inquire about ordering.

In this case, you will enter the new customer data on the Customers form. This form stores both basic and detailed customer information and tracks the items a customer purchases from a company, as well as what they owe.

You must enter information for each of your customers, including data such as the customer's name, address, language, and bank code. You must also set credit limit information for each customer.

In the following exercise, you will update the previously created customer record to add credit limits, and you will create a new customer record.

Exercise 3.4: Update existing customer and create new customer

In this exercise, you will add credit limits to your existing customer and create a new customer record.

Before you begin:

- Ensure you have completed Exercise 2.5 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Update existing customer

1. Click the **Open** icon on the toolbar.
2. Type *customers* in the **Filter** field.

3. Click the **web.Customers** list item.
4. Click the **OK** button. The **Customers** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Customer** field.
7. Click the **Filter in Place** icon. All the item records you entered previously display in the grid.
8. Verify you are on the record for **[your customer] - Fitness R Us**.
9. Click the **Credit** menu item.
10. Type *75,000* in the **Credit Limit** field.
11. Type *50,000* in the **Order Credit Limit** field.
12. Click the **Save** icon.

Part 2: Create a new customer

1. Click the **New** icon.
2. Type *[your initials]?* in the **Customer** field.
3. Click the **Detail** menu item.
4. Type *Quality Exercise Equipment* in the **Customer Name** field.
5. Type *8508 Hampton Drive* in the **Address [1]** field.
6. Type *Grandview* in the **City** field.
7. Click the **Prov/St Code** drop-down arrow.
8. Click the **OH** list item.
9. Type *43004* in the **Postal/Zip** field.
10. Click the **Bank Code** drop-down arrow.
11. Click the **BK1** list item.
12. Click the **Credit** menu item.
13. Type *75,000* in the **Credit Limit** field.
14. Type *50,000* in the **Order Credit Limit** field.
15. Click the **Save** icon.
16. Click the **X** on the **Customers** form.

Scenario: Creating sales orders

There are several ways to create customer sales orders in SyteLine. Sometimes you will create estimates as illustrated in the Smartwatch opportunity and estimate exercises above. In this case, when the customer is ready to purchase the product, you will convert the previously recorded estimate to a sales order using the Copy Orders and Estimates form.

In other circumstances, the customer order may happen directly, without previously generating an opportunity or estimate. In this case you will use the Customer Orders form to enter the order information.

Each of these methods of capturing a customer sales order is illustrated in the following exercises.

Exercise 3.5: Convert estimate to sales order

In this exercise, you will convert the estimate created in Exercise 3.2 to a sales order.

Before you begin:

- Ensure you have completed Exercise 3.2 and 3.4 because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *copy orders* in the **Filter** field.
3. Click the **Copy Orders and Estimates** list item.
4. Click the **OK** button. The **Copy Orders and Estimates** form opens.
5. Click the **Order Type** drop-down arrow in the **From** column.
6. Click the **Estimate** list item.
7. Type *[your Estimate number]* in the **Order Number** field in the **From** column. **Note:** This is the same as the Estimate number you created in Exercise 3.2.
8. Type *[your initials]?* in the **Order Number** field in the **To** column.
9. Click the **Process** button. A dialog box opens with the message, "Customer Order that has [Order: XX0000000X] and [Order Type: Regular] does not exist. Customer Order will be created."
10. Click the **OK** button. A dialog box opens with the message, "Copy was successful."
11. Click the **OK** button. Your **Order Number** now displays in the **Order** field in the grid.
12. Click the **X** on the **Copy Orders and Estimates** form.

Exercise 3.6: Create a new customer order

In this exercise, you will create and verify a new customer order.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create customer order

1. Click the **Open** icon on the toolbar.
2. Type *customer orders* in the **Filter** field.
3. Click the **web.CustomerOrders** list item.
4. Click the **OK** button. The **Customer Orders** form opens.
5. Click the **New** icon.
6. Type *[your initials]** in the **Order** field.
7. Click the **Customer** drop-down arrow.
8. Click **[your customer – Quality Exercise Equipment]** in the **Customer** field.
9. Click the **Save** icon.

Part 2: Create customer order line

1. Click the **Lines** menu item. The **Customer Order Lines (Linked)** form opens.
2. Type *[your initials]-FG-01* in the **Item** field.
3. Press **Tab**. A dialog box opens with the message, “Not one Item Price exists for Item that has [Item: [Your initials]-FG-01] and [Site: DAL].”
4. Click the **OK** button.
5. Type *100* in the **Qty Ordered** field.
6. Type *300* in the **Unit Price** field.
7. Click the **Save** icon.
8. Click the **X** on the **Customer Order Lines (Linked)** form. The **Customer Orders** form displays.

Part 3: Print the Order Verification report

1. Click the **Order Verification Report** menu item. The **Order Verification Report** form opens with your order number displayed in the Order Starting and Ending fields.
2. Click the **Print** button. The **Order Verification Report** opens in a new tab.
3. Verify **Qty** and **Unit Price** are correct.
4. Click the **X** on the report tab to close. A dialog box opens with the message, “Report Submitted”.
5. Click the **OK** button.

6. Click the **Window** drop-down arrow in the **Menu** bar.
7. Click the **Close All** menu item.

Sales Order To Shipping process

The Sales Order To Shipping business process includes all the activities related to processing the customer order. It starts with receiving the customer PO, and continues with creating the customer order, sending an order acknowledgment, and finally shipping the item.

Process diagram

The overall business process is shown in the diagram below.

Sales Order To Shipping business process diagram

Note: Order shipment steps will be reviewed in the Demand To Build business process.

Shipping To Invoice process

The Shipping To Invoice process explains the activities that take place after the order has been shipped to the customer.

Process diagram

The overall business process is shown in the diagram below.

Shipping To Invoice business process diagram

Note: Order invoicing steps will be reviewed in the Financial Plan To Report business process.

Invoice To Cash process

The Invoice To Cash process involves all activities from the moment the invoice is created until the customer payment is received and applied. The Invoice To Cash process starts with generating the invoice and includes sending the invoice to customer, receiving customer payments, applying payments to invoices, and finally cash management.

Process diagram

The overall business process is shown in the diagram below.

Invoice To Cash business process diagram

Note: Invoice processing steps will be reviewed in the Financial Plan To Report business process.

Return To Credit process

The Return To Credit business process encompasses all the activities pertaining to managing customer returns. The process starts with receiving requests from the customer to return a product. A series of activities follows to unship the product, authorize credit, book a Return Material Authorization (RMA), send customer disposition information, send a replacement or give credit, and finally, generate a credit memo and posting.

Process diagram

The overall business process is shown in the diagram below.

Return To Credit business process diagram

Note: This process is not covered in this course.

Related course

For more information about the Return To Credit process and associated tasks, please refer to the **CloudSuite Industrial: Using Return Material Authorizations** course.

Check your understanding

?

What is one component of Quote To Cash business process?

- a) Shipping To Invoice
- b) Shipping To Sales Order
- c) Credit To Return
- d) Sales Order To Quote

?

What do you create if you want to send more information to a customer while working on a sales opportunity?

- a) Estimate
- b) Sales order
- c) Lead
- d) Campaign

?

What field should be checked on the Items form if using MRP or APS?

- a) Purchased
- b) Stocked
- c) Product Code
- d) Shrink Factor

?

What field on the Customers form is not required, but the customer order line will default as Planned if the field is not completed?

- a) Bank Code
- b) Type
- c) Credit Limit
- d) Product Code

?

Which report is used to send to a customer after an estimate is created?

- a) Order Acknowledgement
- b) Estimate Verification

- c) Estimate Response Form Report
- d) Order Verification

What is the trigger of the Sales Order To Shipping business process?

- a) Creation of estimate
- b) Shipping the item
- c) Creating an opportunity
- d) Receipt of customer order

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 4: Design To Release

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to explain the primary functions of the Design To Release business process. In this lesson, you will:

- Identify the components of the Design To Release business process.
- Explain how to define the components of the bill of materials (BOM).
- List the steps to create a new BOM.

Topics

- Design To Release business process overview
- Design To BOM/Routing process
- Engineering Request To Approve process
- Approve To Release process

Design To Release business process overview

The Design To Release process encompasses the conversion of engineering drawings to a manufacturing BOM, the engineering change notice process, and ultimately approval of the release to production.

Design To Release business process diagram

There are three main components of the Design To Release business process, as shown in the diagram above. This lesson focuses on the Design To BOM/ Routing component, outlined on the diagram.

Key capabilities

The Design To Release business process is supported by a variety of functions within SyteLine to do the following:

- Copy current BOM to jobs
- Measure performance using variances between current and actual job costs
- Analyze work center capacity and schedule production based on forecasts, open orders, and jobs
- Maintain a comprehensive audit trail of changes to the BOM and routing
- Maintain distribution codes for notification of Engineering Change Notice (ECN) changes
- Prevent changes to the BOM outside of the ECN process
- Require approval prior to implementing changes to the BOM

Related course

For more information about the Design To Release processes and associated tasks, please refer to the course **CloudSuite Industrial: Using Bills of Materials and Engineering Change Notices**.

Design To BOM/Routing process

The Design To BOM/Routing process allows users to convert an engineering drawing package into a manufacturing BOM. A routing is a set of operations, or steps, that must be done to assemble an item. For instance, assembling a bicycle might include these three operations: paint bike frame, attach gear assembly, and attach handlebars.

A BOM is a series of sequential manufacturing operations where raw materials are consumed and/or converted within work centers on the shop floor. The work center operations and materials are used to construct BOMs that logically mimic the physical process of building a product. The BOM level of detail is determined based on the control required in the manufacturing process, information required for analytical purposes, and to control the flow of material on the shop floor.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Design To BOM/Routing business process diagram

Steps to set up a routing and BOM to manufacture an item typically include the following:

- Labor and machine resources needed to manufacture the item are specified on the Resources form.
- Similar resources used in the manufacturing process are assigned to one or more Resource Groups.
- Work centers are defined to capture manufacturing costs. When using APS, resource groups are typically assigned to work centers for planning and scheduling purposes.
- The operational sequence required to manufacture the item by is defined creating current operations for the item. Each current operation specifies:
 - The work center that will be utilized in the operation.
 - The machine and/or labor hours required to complete the operation.
- The current materials and quantities used in manufacturing are specified for each current operation. The material sequence will mimic the order in which the material is consumed in the manufacturing process.
- Once the BOM is complete, the Current BOM Cost Roll Up utility recalculates the values shown on the Item Costs form.

Scenario: Setting up a BOM

After the new Smartwatch fitness tracker product is designed and engineered, the next step is to set up the components needed for manufacturing. In this lesson you will set up a BOM, which incorporates the requirements to create the Smartwatch item, including labor, parts, and machine time.

Note: Job orders will be reviewed in the Plan To Inventory business process.

Procedure

All elements of the BOM must be set up before the BOM can be generated. The setup steps are as follows:

BOM setup diagram

The finished good and component material item records have already been created, so step one of this process is complete. Next you will set up the operational data supporting the Smartwatch BOM, completing the rest of the steps.

Operational data

The operational data underlying the manufacturing process for the Smartwatch includes:

- **Employees/shifts:** Two employees assigned to Smartwatch work
- **Resources:** Machine time to cut the wristband material and labor time to assemble the Smartwatch
- **Resource groups:** Assembly and cutting
- **Work centers:** Assembly and cutting area

In the following exercises, you will create the records for each of these types of operational data.

Exercise 4.1: Add employees

In this exercise, you will add several new employee records.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create a new employee

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *employees* in the **Filter** field.
3. Click the **web.Employees** list item.
4. Click the **OK** button. The **Employees** form opens.
5. Click the **New** icon. The **Copy From Applicant (Modal)** form opens.
6. Click the **Cancel** button. The **Employees** form displays with a new blank record.
7. Type *[your initials]?* in the **Employee** field.
8. Type *Ross* in the **Last Name** field.
9. Type *John* in the **First Name** field.
10. Click the **Shift** drop-down arrow.
11. Click the **1** list item.
12. Click the **Wage Acct** drop-down arrow.
13. Click the **50300** list item.
14. Click the **Payroll** menu.
15. Click the **Rates and Taxes** menu item.
16. Type *18* in the **Mfg Reg Rate** field.
17. Type *22* in the **Mfg OT Rate** field.
18. Type *36* in the **Mfg DT Rate** field.

Part 2: Create a second new employee

1. Click the **Employees** menu.
2. Click the **Detail** menu item.
3. Repeat steps 7-18 in **Part 1** using the data in the following table.

Field	Value
Employee	[your initials]?

Field	Value
Last Name	Smith
First Name	Carl
Shift	1
Wage Acct	50300
Mfg Reg Rate	18
Mfg OT Rate	22
Mfg DT Rate	36

- Click the **Save** icon.
- Click the **X** on the **Employees** form.

Exercise 4.2: Create resources

In this exercise, you will create the resources needed for the Smartwatch assembly.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

- Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
- Type *resources* in the **Filter** field.
- Click the **web.Resources** list item.
- Click the **OK** button. The **Resources** form opens.
- Click the **New** icon.
- Type *[your initials]-SW-L1* in the **Resource** field.
- Type *Smartwatch Assembly* in the **Description** field.
- Click the **Resource Type** drop-down arrow.
- Click the **Labor** list item.

10. Click the **New** icon.
11. Type *[your initials]-SW-M1* in the **Resource** field.
12. Type *Cutting* in the **Description** field.
13. Verify **Machine** is selected in the **Resource Type** field. If not, follow these steps:
 - a. Click the **Resource Type** drop-down arrow.
 - b. Click the **Machine** list item.
14. Click the **Save** icon.
15. Click the **X** on the **Resources** form.

Exercise 4.3: Create resource groups

In this exercise, you will create two resource groups and assign your new resources to them.

Before you begin:

- Ensure you have completed Exercise 4.2 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create labor resource group

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *resource groups* in the **Filter** field.
3. Click the **web.ResourceGroups** list item.
4. Click the **OK** button. The **Resource Groups** form opens.
5. Click the **New** icon.
6. Type *[your initials]-SW-L1-RG* in the **Group** field.
7. Type *Smartwatch assembly* in the **Description** field.
8. Click the **Type** drop-down arrow.
9. Click the **Labor** list item.
10. Click the **Resources** menu item.
11. Click in the **Resource** field in the **Resources** sub-collection.
12. Click the **Resource** drop-down arrow.
13. Click the *[your initials]-SW-L1* list item.
14. Click the **Save** icon.

Part 2: Create machine resource group

1. Click in the **Group** field. **Note:** You need to do this step prior to creating a new resource group record.
2. Click the **New** icon.
3. Type *[your initials]-SW-M1-RG* in the **Group** field.
4. Type *Wristband cutting* in the **Description** field.
5. Verify **Machine** is selected in the **Type** field. If not, follow these steps:
 - a. Click the **Type** drop-down arrow.
 - b. Click the **Machine** list item.
6. Click the **Resources** menu item.
7. Click in the **Resource** field in the **Resources** sub-collection.
8. Click the **Resource** drop-down arrow.
9. Click the *[your initials]-SW-M1* list item.
10. Click the **Save** icon.
11. Click the **X** on the **Resource Groups** form.

Exercise 4.4: Create work centers

In this exercise, you will create two new work centers for the Smartwatch manufacturing activities by duplicating existing work center records.

Before you begin:

- Ensure you have completed Exercise 4.3 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create assembly work center

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *work centers* in the **Filter** field.
3. Click the **web.WorkCenters** list item.
4. Click the **OK** button. The **Work Centers (Filter in Place)** form opens.
5. Click the **Filter in Place** icon.
6. Click to select the **AS-500** row in the grid.
7. Click the **Actions** drop-down arrow on the **Menu** bar.
8. Click the **Duplicate** list item.
9. Type *[your initials]-ASY* in the **Work Center** field.

10. Type *Smartwatch assembly* in the **Name** field.
11. Verify **100** is displayed in the **Department** field. If not, follow these steps:
 - a. Click the **Department** drop-down arrow.
 - b. Click the **100** list item.
12. Click the **Backflush** drop-down arrow.
13. Click the **Neither** list item.
14. Click the **Costing** menu item.
15. Verify the value **15** displays in the **Setup Rate** field.
16. Verify the value **15** displays in the **Run Rate (Lbr)** field.
17. Click the **Resource Groups** menu item.
18. Click the **Group** field in the grid.
19. Click the **New** icon.
20. Type *[your initials]-SW-L1-RG* in the **Group** field.
21. Click the **Scheduling** tab.
22. Click the **Save** icon.

Part 2: Create cutting area work center

1. Click the **Actions** drop-down arrow in the **Menu** bar.
2. Click the **Duplicate** list item.
3. Type *[your initials]-Cut* in the **Work Center** field.
4. Type *Cutting area* in the **Name** field.
5. Verify **100** is displayed in the **Department** field. If not, follow these steps:
 - a. Click the **Department** drop-down arrow.
 - b. Click the **100** list item.
6. Verify **Neither** is displayed in the **Backflush** field. If not, follow these steps:
 - a. Click the **Backflush** drop-down arrow.
 - b. Click the **Neither** list item.
7. Click the **Costing** tab.
8. Verify the value **15** displays in the **Setup Rate** field.
9. Verify the value **15** displays in the **Run Rate (Lbr)** field.
10. Type *10* in the **Fix Mach Ovhd Rate** field.
11. Type *10* in the **Var Mach Ovhd Rate** field.
12. Click the **Resource Groups** tab.
13. Click the **Group** field in the grid.
14. Click the **New** icon.
15. Type *[your initials]-SW-M1-RG* in the **Group** field.
16. Click the **Save** icon.

17. Click the **X** on the **Work Centers** form.

Scenario: Setting up manufacturing data and BOM

Now that all the operational data for the Smartwatch product has been set up, you will add manufacturing data records for the Smartwatch BOM. These records define the quantity of resources required for each step of the Smartwatch manufacturing process, and include:

- **Current operations:** Two operations, cutting and assembly
- **Current materials:** Three materials, Smartwatch LCD face, watchband, and Smartwatch battery

After these records have been added, you will perform a current BOM cost roll up.

Exercise 4.5: Set up current operations

In this exercise, you will create new current operation records for cutting and assembly.

Before you begin:

- Ensure you have completed Exercise 4.4 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create cutting current operation

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *current operations* in the **Filter** field.
3. Click the **web.CurrentOperations** list item.
4. Click the **OK** button. The **Current Operations** form opens.
5. Click the **New** icon.

Note: Data in all fields defaults to the values from the first record in the grid. You will enter new values in the following steps.

6. Type *[your initials]-FG-01* in the **Item** field.
7. Click the **WC** drop-down arrow.
8. Click the **[your initials]-Cut** list item.
9. Type *0.1* in the **Machine Hours per Piece** field.
10. Type *1* in the **Setup** field.

Part 2: Create assembly current operation

1. Click the **New** icon.

2. Click the **WC** drop-down arrow.
3. Click the **[your initials]-ASY** list item.
4. Type *0.5* in the **Labor Hours per Piece** field.
5. Click the **Save** icon.
6. Click the **X** on the **Current Operations** form.

Exercise 4.6: Set up current materials

In this exercise, you will add materials to your BOM through the Engineering Workbench.

Before you begin:

- Ensure you have completed Exercise 4.5 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Add material to the cutting operation

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *engineering workbench* in the **Filter** field.
3. Click the **Engineering Workbench** list item.
4. Click the **OK** button. The **Engineering Workbench** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]-FG-01* in the **Item** field.
7. Click the **Filter in Place** icon.

Note: You will see your two operations in the top section of the form, and nothing listed in the materials section in the lower part of the form. You are using this form to add your materials in this exercise, but the same form can also be used to add operations.

8. Click in the **Operation** field in the grid under the **Materials** section.
9. Click the **Operation** drop-down arrow.
10. Click the **10** list item.
11. Type *[your initials]-PP-02* in the **Item** field. **Note:** The **Qty** field will default to 1, which is our required quantity.
12. Type *0.1* in the **Scrap Factor** field.

Note: Assigning a scrap factor to the material means that the required quantity will be automatically increased to reflect the scrap amount.

This is calculated as follows: $\text{Required Qty} / (1 - \text{Scrap Factor})$. For instance, for a required quantity of 100, the amount needed is $100 / (1 - .1) = 111.11$.

The additional quantity required will also automatically increase the material cost by the same amount.

Part 2: Add materials to assembly operation

1. Click the **New** icon.
2. Click the **Operation** drop-down arrow.
3. Click the **20** list item.
4. Type *[your initials]-PP-01* in the **Item** field. **Note:** The **Qty** field will default to 1, which is the required quantity.
5. Click the **New** icon.
6. Verify **20** is in the **Operation** field.
7. Type *[your initials]-PP-03* in the **Item** field. **Note:** The **Qty** field will default to 1, which is the required quantity.
8. Click the **Save** icon.
9. Click the **X** on the **Engineering Workbench** form.

Part 3: Preview Item Current Routing report

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *item current routing* in the **Filter** field.
3. Click the **Item Current Routing Report** list item.
4. Click the **OK** button. The **Item Current Routing Report** form opens.
5. Type *[your initials]-FG-01* in the **Starting Item** field.
6. Click the **Preview** button. The **Item Current Routing Report** opens in a new tab.
7. Verify the BOM is correct.
 - The Cutting area has the Watchstrap material, and
 - The Smartwatch Assembly has the Face of the Smartwatch and Watch Battery material.
8. Click the **X** on the report tab to close.
9. Click the **X** on the **Item Current Routing Report** form.

Exercise 4.7: Perform a current BOM cost roll up

In this exercise, you will perform a current BOM cost roll up and review item cost data.

Before you begin:

- Ensure you have completed Exercise 4.6 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Run current BOM cost roll up

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *current bom cost* in the **Filter** field.
3. Click the **Current BOM Cost Roll Up** list item.
4. Click the **OK** button. The **Current BOM Cost Roll Up** form opens.
5. Click the **Process** button. A dialog box opens with the message, “[Current BOM Cost Roll Up] was successful.”
6. Click the **OK** button.
7. Click the **X** on the **Current BOM Cost Roll Up** form.

Part 2: View costs of Smartwatch

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *item costs* in the **Filter** field.
3. Click the **web.ItemCosts** list item.
4. Click the **OK** button. The **Item Costs** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]-FG-01* in the **Item** field.
7. Click the **Filter in Place** icon.
8. Use the values in the table below to verify the cost data displayed on the **Detail** menu item.

Note: If your values are not matching the table value refer to the troubleshooting form to correct.

Field	Value	Troubleshooting form
Setup	15.00	Current Operations Operation 10, Work Centre – AA-Cut Details menu item • Setup Hours = 1 Costs menu item

Field	Value	Troubleshooting form
		Setup Rate = \$15
Run	7.50	Current Operations Operation 20, Work Centre – AA-ASY Details menu item - Labor Hours per Piece = .50 Costs menu item - Run Rate (Labor) = \$15
Material	24.22222	Current Materials – Qty 1 Costs menu item – Material field Oper 10 - AA-PP-02 = 2.00 Oper 20 - AA-PP-01 = 15.00 Oper 20 - AA-PP-03 = 7.00
Tool	0.00	
Fixture	0.00	
Other	0.00	
Fixed	16.00	Current Operations Setup, run, and overhead rates are set up correctly
Variable	16.00	Current Operations Setup, run, and overhead rates are set up correctly
Current Unit Cost	78.72222	
Unit Cost	0.00	
Assembly Subtotal	78.72222	
Assy Matl Subtotal	N/A	
Assembly Total	78.72222	
Accumulated Total	78.72222	

Note: The Material cost of \$24.22 reflects the 10% scrap factor for item **[your initials]-PP-02**.

You must verify the totals for the Smartwatch before proceeding any further. Any errors not corrected at this point will be very difficult to reverse later.

9. Click the **X** on the **Item Costs** form.

Engineering Request To Approve process

The Engineering Request To Approve process allows companies to control and track revisions made to a BOM or to the routing of an item throughout the lifecycle of the product. The ECN process is crucial in ensuring high quality, safety, and consistency of products.

Process diagram

The overall business process is shown in the diagram below.

Engineering Request To Approve business process diagram

Note: The Engineering Request To Approve process is not covered in this course. Please refer to the course **CloudSuite Industrial: Using Bills of Materials and Engineering Change Notices** for more information.

Approve To Release process

The Approve To Release process allows customers to control the approval and implementation of the ECN to the bill of material/routing. The bill of material/routing history can be tracked using item revisions. Once the ECN is approved, the item revision is updated, and the ECN is posted. Once the ECN is posted, the change to the bill of material/routing will take effect.

Process diagram

The overall business process is shown in the diagram below.

Approve To Release business process diagram

Note: The Approve To Release process is not covered in this course. Please refer to the course **CloudSuite Industrial: Using Bills of Materials and Engineering Change Notices** for more information.

Check your understanding

What is one component of the Design To Release business process?

- a) Design To BOM/Routing
- b) Plan To Schedule Production
- c) Schedule To Plan Production
- d) BOM/Routing To Design

The steps for creating a BOM appear below in the wrong order. Reorder the steps from **1-7** to reflect the correct sequence.

Create resource groups

Create operations for end items

Create work center records

Create material records for operations

Create item records

Create resource records

Create shift records

Match each of the following items with the form through which it is defined. The possible forms are: **Resources**, **Resource Groups**, **Work Centers**, and **BOM Cost Roll Up**.

Item to define

Form

When you set up this form you select your Resource Type.

Matching answer

This form is linked on the Work Centers form.

Matching answer

This form is used to define your Setup Rate and Run Rate.

Matching answer

This form is used to update the current cost for manufactured materials.

Matching answer

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 5: Procure To Pay

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to explain the key vendor management tasks in the Procure To Pay business process. In this lesson, you will:

- Identify the components of the Procure To Pay business process.
- Explain how to create a purchase order (PO) for items not used in the manufacturing process.
- Describe user limits for requisition approvals.
- Explain how to complete a PO from the work bench.
- Describe the impact of a shrink factor on material quantities.
- Explain how to receive a PO order.
- Identify resources for reviewing the system impact of Procure To Pay business process.

Topics

- Procure To Pay business process overview
- Requisition To PO process
- PO To Receipt process
- Receipt To Payment process
- Return To Debit process

Procure To Pay business process overview

The Procure To Pay process includes the activities associated with buying and receiving items from vendors, paying vendors, and returning items for a credit.

The Procure To Pay process also includes the purchasing and vendor payment process for goods and services provided. Purchasing manages the purchase requisition process for requesting items or services. If this is for a new item, a request for quote (RFQ) may be generated. Once the requisition is submitted and approved, it becomes a PO and is released to the vendor. Items are received into inventory. A three-way match of the PO, receipt, and invoice is used to authorize payments and ensure that the correct items are received. Accounting manages the accounts payable process.

Procure To Pay business process diagram

There are four main components of the Procure To Pay business process, as shown in the diagram above. This lesson focuses on the Requisition To PO and Purchase Order To Receipt components, outlined on the diagram. The Receipt To Payment component will be reviewed in the Financial Plan To Report business process.

Key capabilities

The Procure To Pay business process is supported by a variety of functions within SyteLine to do the following:

- Create requisitions as an approval step in the process of requesting goods or services
- Generate an RFQ for requisitions, customer orders, or inventory
- Enter, generate, monitor, and receive POs
- Store pricing information for individual items using the Vendor Contracts form
- Access vendor performance information, vendor interactions, and purchasing information for common items
- Set default values for POs, including tolerance factors for PO receiving and vouchers
- View the planned costs, actual unit costs, promise dates, and due dates for each line item
- Place vendors on payment hold
- Change POs and track the changes
- Receive a whole/partial order or a whole/partial line/release

Related courses

For more information about the Procure To Pay processes and associated tasks, please refer to the courses **SyteLine: Using Purchase Orders and Requisitions** and **SyteLine: Using Request for Quote**.

Requisition To PO process

The Requisition To PO process helps organizations manage the request for quote process and purchasing approval permissions. The steps of creating a requisition, generating an RFQ, selecting a vendor, approving the requisition, and converting to the requisition to a PO are linked. The RFQ item references the requisition line, and the requisition line references the PO. This allows traceability throughout the process, which can be used for analytics and/or auditing purposes.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Requisition To PO business process diagram

Note: The Generate RFQ process is not covered in this course. Please refer to the course **CloudSuite Industrial: Using Request for Quote** for more information.

A PO requisition can be created manually, or by cross-referencing from a customer order, transfer order, BOM, or job. A planned order can also be firmed into a PO requisition. Steps in this process usually include the following:

- First, a purchase requisition is created and lines are added for each item.
- PO Requisition Line records are approved by an authorized user.
 - The approver's PO Req Limit and PO Req Line Limit must be large enough to include the amount of this requisition line.
- After the requisition is approved, it can be converted into a PO, which updates the requisition status to converted. The PO number is referenced on the Purchase Order Requisition Lines form.

Scenario: Using requisitions

Progressive Cycles regularly purchases non-production goods from vendors in addition to the materials needed in manufacturing. For many such goods, the company uses purchase requisitions as an approval step in requesting goods or services.

In the following exercises, you will create a requisition for printer cartridges from an existing vendor, and then approve it and convert it to a PO to illustrate this process.

Exercise 5.1: Create a purchase requisition

In this exercise, you will create a requisition for a purchased item.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: User authorizations

Note: Training user logins in an Infor training environment may already have sufficient user authorization limits to complete the following exercises. In other environments, you may need to complete these steps.

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *users* in the **Filter** field.
3. Click the **Users** list item.
4. Click the **OK** button. The **Users (Filter in Place)** form opens.
5. Type *[your user name]* in the **User Name** field. **Note:** This is your SyteLine login user name.
6. Click the **Filter in Place** icon.
7. Click the **Additional Info** tab.
8. Verify that the **PO Req Limit** field displays an amount of **5,000** or higher. If not, follow this step:
 - a. Type *5,000* in the **PO Req Limit** field.
9. Verify that the **PO Req Line Limit** field displays an amount of **2,000** or higher. If not, follow this step:
 - a. Type *2,000* in the **PO Req Line limit** field.
10. Click the **Save** icon.
11. Click the **X** on the **Users** form.

Part 2: Add PO requisition

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *purchase order req* in the **Filter** field.
3. Click the **web.PurchaseOrderRequisitions** list item.
4. Click the **OK** button. The **Purchase Order Requisitions** form opens.

5. Click the **New** icon.
6. Type *[your initials]?* in the **Requisition** field.
7. Click the **Save** icon.
8. Write down your **Requisition** number: _____.

Part 3: Add non-inventory item data from requisition line

1. Click the **Lines** button. The **Purchase Order Requisition Lines (Linked)** form opens.
2. Type *[your initials]-Black 12 A Cartridge* in the **Item** field.
3. Press **Tab** to move out of the **Item** field. A dialog box opens with the message, "Item that has [Item: *[your initials]-Black 12 A Cartridge*] does not exist. Do you want to Create/Edit Non-Inventory Item?"
4. Click the **OK** button. The **Non-Inventory Items (Modal)** form opens.
5. Type *Laser jet printer toner* in the **Description** field.
6. Click the **U/M** drop-down arrow.
7. Click the **EA** list item.
8. Click the **Save** icon.
9. Click the **X** on the **Non-Inventory Items (Modal)** form. The **Purchase Order Requisition Lines (Linked)** form displays.

Part 4: Complete the requisition

1. Type 2 in the **Ordered** field.
2. Click the **Vendor** drop-down arrow.
3. Click the **19** list item. A dialog box opens with the message, "[Recalculate] will be performed for Contract Price."
4. Click the **Yes** button.
5. Click the **Costs** menu item.
6. Type 50 in the **Material** field.
7. Click the **Save** icon.
8. Click the **Window** drop-down arrow in the menu bar.
9. Click the **Close All** menu item.

Exercise 5.2: Approve requisition and convert to purchase order

In this exercise, you will approve the purchase requisition created in Exercise 5.1 and convert it to a PO.

Before you begin:

- Ensure you have completed Exercise 5.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Approve purchase order requisition

Note: In a production environment, purchase requisitions are normally approved by a different user than the user who created the requisition. For purposes of this exercise, you will approve the requisition using your current user login rather than a different user login.

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *purchase order requisition* in the **Filter** field.
3. Click the **web.PurchaseOrderRequisitionLines** list item.
4. Click the **OK** button. The **Purchase Order Requisition Lines** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Requisition** field.
7. Click the **Filter in Place** icon.
8. Click the **Status** drop-down arrow.
9. Click the **Approved** list item.
10. Click the **Save** icon.

Part 2: Convert PO requisition to purchase order

1. Click the **Convert PO Req** menu item. The **Convert PO Requisition** form opens.
2. Verify *[your PO Requisition]* is displayed in the **PO Requisition** field.
3. Type *[your initials]?* in the **PO** field.
4. Click the **Process** button. A dialog box opens with the message, "Purchase Order that has [PO: XX? does not exist. Should [Add] be performed?".
5. Click the **Yes** button. A dialog box opens with the message, "1 PO Requisition Line(s) were processed".
6. Click the **OK** button. The **Convert PO Requisition** form refreshes and displays the new PO number assigned to the PO requisition.
7. Write down your **PO Num** number: _____.
8. Click the **Window** drop-down arrow in the menu bar.
9. Click the **Close All** menu item.

Purchase Order To Receipt process

The PO To Receipt process allows a company to manage purchasing requirements with vendors, concluding with the receipt of the PO lines into stock. Purchasing allows you to enter, generate, track, and receive POs to satisfy demand.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Purchase Order To Receipt business process diagram

A PO can be created manually or by converting a PO requisition. It can also be generated from the Material Planner Workbench. The process steps typically include the following:

- The PO header record is created.
 - If there is vendor contract pricing, the relationship between the item and the vendor is defined on the Vendor Contracts and Vendor Contract Pricing forms.
- Next, the PO lines are created. Each line represents one item being ordered.
- Once the PO is completed and approved, the PO report is generated and submitted to the vendor.
- The vendor delivers the items, and the PO is received in the system. Inventoried items are received into stock, and non-inventory items are expensed.

Scenario: Purchasing Smartwatch materials from vendors

Most purchase orders result from the need to purchase materials for manufacturing. In our scenario, Progressive Cycles will purchase Smartwatch components and receive these goods into inventory so they are available for manufacturing the Smartwatch product.

The first step is to set up vendors and contracts for purchasing these components. Next, you will run APS Planning to generate planned POs needed to fulfill customer demand. From there, you will generate POs from the Material Planner Workbench. Finally, you will receive the PO goods into inventory.

Exercise 5.3: Create vendors and vendor contracts

In this exercise, you will create new vendor records and associated vendor contract records.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create Vendors

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *vendors* in the **Filter** field.
3. Click the **web.Vendors** list item.
4. Click the **OK** button. The **Vendors** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Vendor** field.
7. Type *Electric Parts* in the **Vendor Name** field.
8. Click the **Terms** drop-down arrow.
9. Click the **2%** list item.
10. Click the **Bank Code** drop-down arrow.
11. Click the **BK1** list item.
12. Type *555 South Street* in **Address [1]** field.
13. Type *Westerville* in the **City** field.
14. Click the **Prov/St Code** drop-down arrow.
15. Click the **OH** list item.
16. Type *43005* in the **Postal/Zip** field.
17. Repeat steps **5-16** using the information in the following table.

Field	Value
Vendor	[your initials]?
Description	Batteries R Us
Terms	2%
Bank Code	BK1
Address [1]	430 Elm Avenue
City	Lancaster
Prov/St Code	OH
Postal/Zip	43008

18. Click the **Save** icon.
19. Click the **X** on the **Vendors** form.

Part 2: Create Vendor Contracts

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *vendor contracts* in the **Filter** field.
3. Click the **web.VendorContracts** list item.
4. Click the **OK** button. The **Vendor Contracts** form opens.
5. Click the **New** icon.
6. Type *[your initials]** in the **Vendor** field.
7. Click the **Vendor** drop-down arrow.
8. Click the **[your first vendor]** list item.
9. Type *[your initials]-PP-01* in the **Item** field.
10. Type *SM-0123* in the **Vendor Item** field.
11. Click the **Save** icon.
12. Click the **Prices** menu item. The **Vendor Contract Prices (Linked)** form opens.
13. Click the **calendar** icon in the **Effective Date** field. A calendar displays with the current month and year visible.
14. Click the **Today** button on the calendar. The **Effective Date** field populates.
15. Type *1* in the **Break Qty** field.
16. Type *15.00* in the **Unit Price** field.

17. Click the **Save** icon.
18. Click the **X** on the **Vendor Contract Prices (Linked)** form. The **Vendor Contracts** form displays.
19. Repeat steps **5-18** using the information in the following table to create two additional vendor contracts.

Field	Vendor contract 2 value	Vendor contract 3 value
Vendor	[your first vendor]	[your second vendor]
Item	[your initials]-PP-02	[your initials]-PP-03
Vendor Item	WS-0124	BB-9984
Effective Date	[Today]	[Today]
Break Qty	1	1
Unit Price	2.00	7.00

20. Click the **Window** drop-down arrow in the menu bar.
21. Click the **Close All** menu item.

Exercise 5.4: Run APS and generate Material Planner Workbench

In this exercise, you will verify that APS is the planning mode and then run APS and the Material Planner Workbench to generate current planning information.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Note: SyteLine allows you to choose between using APS or MRP (Material Requirements Planning) for planning. In this course, you only cover APS and how to create a workbench using APS.

Please refer to the course **SyteLine: Using Advanced Planning and Scheduling (APS) Overview and Concepts**, and **SyteLine: Fundamentals of Advanced Planning and Scheduling (APS)** for detailed information about APS.

Please refer to the course **CloudSuite Industrial: Using Material Requirements Planning** for more information about MRP.

Part 1: Verify APS mode

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *infinite* in the **Filter** field.
3. Click the **Infinite APS Mode** list item.
4. Click the **OK** button. The **Infinite APS Mode** form opens.
5. Verify **Use Infinite APS Planning** is selected. If not, follow these steps:
 - a. Click to select the **Use Infinite APS Planning** check box.
 - b. Click the **Save** icon.
6. Click the **X** on the **Infinite APS Mode** form.

Part 2: Run APS

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *aps planning* in the **Filter** field.
3. Click the **APS Planning** list item.
4. Click the **OK** button. The **APS Planning** form opens.
5. Click the **Perform Single Site Plan** radio button.
6. Click the **Plan** button. A dialog box opens with the message, "Task Submitted".
7. Click the **OK** button.
8. Click the **X** on the **APS Planning** form.

Part 3: Verify successful completion

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *background task* in the **Filter** field.
3. Click the **Background Task History** list item.
4. Click the **OK** button. The **Background Task History** form opens.
5. Click the **Filter in Place** icon.
6. Click the top item in the grid, **Planning**.
7. Confirm **Task Succeeded** displays in the **Return Status** field.

Note: You will need to click the **Refresh** icon to refresh the current collection until this message appears. This may take several minutes to complete.

Do **not** proceed to the next step until the **Task Succeeded** message appears. The Material Planner Workbench data will not populate until the Planning task finishes.

- Click the **X** on the **Background Task History** form.

Part 4: Generate Material Planner Workbench

- Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
- Type *material planner workbench generation* in the **Filter** field.
- Click the **Material Planner Workbench Generation** list item.
- Click the **OK** button. The **Material Planner Workbench Generation** form opens.
- Click to clear the **Manufactured** check box.
- Click to clear the **Transferred** check box.

Note: Only the **Purchased** check box will be selected.

- Click the **calendar** icon in the **Ending Date** field. A calendar displays with the current month and year visible.
- Click the **[last day of the next month]** on the calendar. The **Ending Date** field populates.
- Type *[your initials]* in the **Planner Code** field.
- Click the **Buyer** field.
- Press **Delete** to clear the data in the **Buyer** field.
- Click the **Process** button. A dialog box opens with the message, "6 MRP Receipt(s) were processed."
- Click the **OK** button.

Part 5: Review orders in the Material Planner Workbench

- Click the **Planner Workbench** button. The **Material Planner Workbench** form opens.
- Click the **All Orders** radio button. The **Material Planner Workbench** form refreshes with your orders displayed in the grid.
- Note the quantities for the purchased material.

Note: The **Required Qty** field for the *[your initials]-PP-02* (Watchstrap) item entries in the grid are increased by 10% because of the **Scrap Factor** assigned to that item. This is calculated as follows: Required Qty / 1 – Scrap Factor. For instance, for a required quantity of 100, the amount needed is $100 / (1 - .1) = 111.1$.

- Leave the **Material Planner Workbench** form open for the next exercise.

Exercise 5.5: Create and review purchase orders

In this exercise, you will generate POs from the Material Planner Workbench and review the resulting POs.

Before you begin:

- Ensure you have completed Exercise 5.4 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Generate orders

1. Verify you are on the **Material Planner Workbench** form.
2. Click the **All Orders** radio button. **Note:** The data from Exercise 5.4 is displayed.
3. Click the **calendar** icon in the **Process Through Date** field. A calendar displays with the current month and year visible.
4. Click the **[last day of the next month]** on the calendar. The **Process Through Date** field populates.

Example: If the current month is March, click April 30 on the calendar. The **Process Through Date** populates to display 4/30/20[xx].

5. Click the **Process Through** button. **Note:** All the lines in the grid are now selected.
6. Click the **Generate Orders** button. The **Material Planner Workbench Firm PO (Modal)** form opens.
7. Type *[your initials]* in the **PO Prefix** field.
8. Click the **OK** button. A dialog box opens with the message, "6 Planner's Workbench Record(s) were processed. 6 PO Line/Release(s) were created."
9. Click the **OK** button. The dialog box and the **Material Planner Workbench Firm PO (Modal)** form close.

Note: Once the POs are generated through this process, they are removed from the Material Planner Workbench.

10. Click the **Window** drop-down arrow in the menu bar.
11. Click the **Close All** menu item.

Part 2: Review purchase orders

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *purchase orders* in the **Filter** field.

3. Click the **web.PurchaseOrders** list item.
4. Click the **OK** button. The **Purchase Orders** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **PO** field.
7. Click the **Filter in Place** icon.
8. Verify you have three purchase order records displayed in the grid, one for the converted PO requisition, one for the vendor **Electric Parts** and the other for the vendor **Batteries R Us**.
9. Click the grid line for the **Electric Parts** record.
10. Click the **Lines** menu item. The **Purchase Order Lines (Linked)** form opens.
11. Verify the following four lines display in the grid:
 - Item **[your initials]-PP-02** with **Ordered** quantity = 111.12
 - Item **[your initials]-PP-01** with **Ordered** quantity = 100
 - Item **[your initials]-PP-02** with **Ordered** quantity = 1.12
 - Item **[your initials]-PP-01** with **Ordered** quantity = 1
12. Click the **X** on the **Purchase Order Lines (Linked)** form. The **Purchase Orders** form displays.
13. Click the grid entry for the **Batteries R Us** record.
14. Click the **Lines** menu item. The **Purchase Order Lines (Linked)** form opens.
15. Verify the following two lines display in the grid:
 - Item **[your initials]-PP-03** with **Ordered** quantity = 100
 - Item **[your initials]-PP-03** with **Ordered** quantity = 1
16. Click the **Window** drop-down arrow in the **Menu** bar.
17. Click the **Close All** menu item.

Part 3: Print Purchase Order Report

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *purchase order report* in the **Filter** field.
3. Click the **Purchase Order Report** list item.
4. Click the **OK** button. The **Purchase Order Report** form opens.
5. Click to select the **Post Status Changes** check box.
6. Type *[your initials]** in the **Purchase Order** field in the **Starting** column.
7. Click the **Purchase Order** drop-down arrow.
8. Click the **[your purchase order for Electric Parts]** list item.
9. Click the **Purchase Order Ending** drop-down arrow.
10. Click the **[your purchase order for Batteries R Us]** list item.
11. Click the **Print** button. The **Purchase Order Report** opens in a new tab.
12. Review the report. Both of your POs display.
13. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".

14. Click the **OK** button. The **Purchase Order Report** form displays.

15. Click the **X** to on the **Purchase Order Report** form.

Exercise 5.6: Purchase order receiving

In this exercise, you will receive the POs you created in the prior exercise.

Before you begin:

- Ensure you have completed Exercise 5.5 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *purchase order receiving* in the **Filter** field.
3. Click the **Purchase Order Receiving** list item.
4. Click the **OK** button. The **Purchase Order Receiving** form opens.
5. Type *[your initials]** in the **PO Number** field.
6. Click the **PO Number** drop-down arrow.
7. Click the *[your first PO number]* list item. The PO lines display in the grid.
8. Click the **Select All** button.
9. Click the **Receive** button. A dialog box opens with the message, "4 Pending PO Receiving Transaction(s) were posted."
10. Click the **OK** button.

Part 2: Receive second PO

1. Click the **PO Number** drop-down arrow.
2. Click the *[your second PO number]* list item. The PO lines display in the grid.
3. Click the **Select All** button.
4. Click the **Receive** button. A dialog box opens with the message, "2 Pending PO Receiving Transaction(s) were posted."
5. Click the **OK** button.

System impacts: purchase order receiving

The forms that can be reviewed to verify a PO was received are identified in the following table.

Form	Field or item to review
Purchase Order Lines - Costs	Received field = total received Last Rcvd field = current date
Items - Detail	Verify Quantity On Hand
Purchase Order Listing	Status field = Filled Received field is updated
Item Stockroom Locations	Review Location and Location on Hand fields
Journal Entries - PO Dist	In the reference column note the INV PRCV (Inventory Purchase order receiving) for the PO and line, the debit to Inventory Material and credit to Vouchers Payable
Vouchers Payable Report	Review report
Material Transactions	Review transactions

Troubleshooting purchase order receiving

If you are unable to receive your PO, verify the status of your PO. If the status is Planned, you have two options to correct.

- Purchase Order Report – select the Post Status Changes check box prior to printing
- Purchase Order Lines – manually change the status to Ordered

Receipt To Payment process

The Receipt To Payment process allows companies to manage the process of processing vendor payments, including creating and posting vouchers, generating and distributing payments, and printing and posting checks.

Process diagram

The overall business process is shown in the diagram below.

Receipt To Payment business process diagram

Note: Vendor invoice processing steps will be reviewed in the Financial Plan To Report business process.

Return To Debit process

The Return To Debit process is used to return an item to a vendor.

Process diagram

The overall business process is shown in the diagram below.

Return To Debit business process diagram

Note: This process is not covered in this course. Please refer to the course **SyteLine: Using Purchase Orders and Requisitions** for more information.

Check your understanding

?

What is one of the components of the Procure To Pay process?

- a) PO To Requisition
- b) Receipt To Purchase Order
- c) Payment To Receipt
- d) Purchase Order To Receipt

?

Which of the following can be used to generate vendors if an item has never been ordered before?

- a) Request for Quote
- b) Users
- c) Purchase Requisition
- d) Purchase Requisition Lines

?

What form must have dollar limits set up before you can approve a purchase requisition?

- a) Purchase Requisitions
- b) Users
- c) Purchase Requisition Lines
- d) Vendors

?

What form would you use if one of your employees wants to purchase something that is outside of the manufacturing process and would require approval from the Purchasing department?

- a) Purchase Requisitions
- b) Users
- c) Purchase Orders
- d) Vendors

?

What form do you set up in the Material Planner Workbench to link a vendor to an item?

- a) Purchase Requisition Lines

- b) Vendors
- c) Vendor Contracts
- d) Users

What option on the Purchase Order report do you select to change the status on the purchase order from planned to ordered?

- a) Change Order Status
- b) Post Status Changes
- c) Print Item Overview
- d) Print PO Notes

What journal does a PO receipt go to?

- a) PO Dist
- b) AP Dist
- c) IC Dist
- d) SF Dist

What field do you set up on the current materials form to increase the material issued by the specified percent?

- a) Items
- b) Scrap Factor
- c) Shrink Factor
- d) Work Centers

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 6: Plan To Inventory

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to explain how to use Advanced Planning and Scheduling (APS) in the Plan To Inventory business process. In this lesson, you will:

- Identify the components of the Plan To Inventory business process.
- Identify system planning engine options.
- Describe the benefits of using the Material Planner Workbench.
- Explain how to create the workbench from planning output.

Topics

- Plan To Inventory business process overview
- Plan To Replenish process
- Count To Correct process

Plan To Inventory business process overview

The Plan To Inventory process uses the APS module to identify the materials required to fulfill orders, when the materials are needed, and when to release orders.

When you run an APS process, the system generates planned orders (PLNs). PLNs represent APS suggestions of how you can purchase an item to satisfy the demand requirements. A PLN is not tied to a particular requirement.

APS uses item lead times to calculate planned order release dates. After APS recognizes you need a planned order, it must calculate the due date and release date.

To ensure accurate supply requirements, correct on-hand inventory is key. Cycle counting is a method for taking stock of what is in your inventory. Cycle counting is accomplished by taking periodic counts of what is actually in stockrooms. Periodic reconciliation of your inventory balances is important for the proper control of inventory levels.

Plan To Inventory business process diagram

There are two main components of the Plan To Inventory business process, as shown in the diagram above. This lesson focuses on the Plan To Replenish component, outlined on the diagram.

Key capabilities

The Plan To Inventory business process is supported by a variety of functions within Syteline. Some of the key capabilities include the ability to:

- Consolidate future requirements based on 30-day and 90-day buckets
- Apply a shrink factor to accommodate for inventory losses
- Create job orders from the Material Planner Workbench
- Set cycle count triggers for items by warehouse
- Use cycle count functionality to conduct period end counts
- Record variances between on-hand and actual quantities

Related courses

For more information about the Plan To Inventory processes and associated tasks, please refer to the courses **CloudSuite Industrial: Managing Inventory**, **SyteLine: Using Advanced Planning and Scheduling (APS) in Production Planning**, and **CloudSuite Industrial: Using Material Requirements Planning**.

Plan To Replenish process

Infinite APS is a mode of planning that plans requirements based on outstanding requirements, backward planning each requirement from the requirement's needed date to the item's lead time and batching together requirements needed at the same period of time. The system considers on-hand inventory and receipts in determining the net requirements for an item.

The output of an APS process includes planned orders and exception messages.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Plan To Replenish business process diagram

APS Planning is usually run on a nightly basis to synchronize all demands with the latest inventory, supply, shifts, and resources information. The process typically includes the following steps:

- Order entry and other daily activities create demands.
- APS Planning creates planned orders to satisfy the demands.
- Planned orders are firmed into job orders and POs from the Material Planner Workbench.
- Jobs and POs are released, scheduled, and executed.

Scenario: APS Planning and job orders

Next you will use APS to plan the orders needed to satisfy the demand for the Progressive Cycle Smartwatch product. In the following exercises, you will first run APS Planning to generate updated planned orders. From there, you will generate the Material Planner Workbench, using the planned orders to create jobs.

Jobs are used to track specific manufacturing processes, including labor, material, machines, cost and scrapped, work in process, and finished goods inventory.

A benefit of using the Material Planner Workbench is that it consolidates all your plans on the workbench by your planner code.

Exercise 6.1: Run APS

In this exercise, you will run APS Planning to generate updated planning data.

Before you begin:

- Ensure you have completed all previous exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Run APS Planning

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *aps planning* in the **Filter** field.
3. Click the **APS Planning** list item.
4. Click the **OK** button. The **APS Planning** form opens.
5. Click the **Perform Single Site Plan** radio button.
6. Click the **Plan** button. A dialog box opens with the message, "Task Submitted".
7. Click the **OK** button.
8. Click the **X** on the **APS Planning** form.

Part 2: Verify successful completion

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *background task* in the **Filter** field.
3. Click the **Background Task History** list item.
4. Click the **OK** button. The **Background Task History** form opens.
5. Click the **Filter in Place** icon.
6. Click the top item in the grid, **Planning**.
7. Confirm **Task Succeeded** displays in the **Return Status** field.

Note: You will need to click the **Refresh** icon to refresh the current collection until this message appears. This may take several minutes to complete.

Do **not** proceed to the next step until the **Task Succeeded** message appears. The Material Planner Workbench data will not populate until the Planning task finishes.

8. Click the **X** on the **Background Task History** form.

Troubleshooting running APS

If you get an error on Background Task History, a common mistake is running Global Site Planning.

- APS Planning - select the Perform Single Site Plan radio button

Troubleshooting Background Task History error messages

If you get an error on Background Task History, search Help for Troubleshooting APS.

Exercise 6.2: Generate Material Planner Workbench and create jobs

In this exercise, you will generate a Material Planner Workbench and view the output on the Material Planner Workbench.

Before you begin:

- Ensure you have completed all previous exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Generate workbench

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *material planner workbench generation* in the **Filter** field.
3. Click the **Material Planner Workbench Generation** list item.
4. Click the **OK** button. The **Material Planner Workbench Generation** form opens.
5. Click to clear the **Purchased** check box.
6. Click to clear the **Transferred** check box.

Note: Only the **Manufactured** check box will be selected.

7. Click the **calendar** icon in the **Ending Date** field. A calendar displays with the current month and year visible.
8. Click the **[last day of the next month]** on the calendar. The **Ending Date** field populates.
9. Type *[your initials]* in the **Planner Code** field.
10. Click the **Buyer** field.
11. Press **Delete** to clear the data in the **Buyer** field.
12. Click the **Process** button. A dialog box opens with the message, "X MRP Receipt(s) were processed."

13. Click the **OK** button.

Part 2: Create jobs on the workbench

1. Click the **Planner Workbench** button. The **Material Planner Workbench** form opens.
2. Click the **View** drop-down arrow.
3. Click the **Job** list item.
4. Click the **All Orders** radio button. The **Material Planner Workbench** form refreshes with your orders displayed in the grid.

Note: There will be one order displayed with quantity 1 and one order with quantity 100. Note which of these orders is listed first. This will usually determine which job is assigned job number 1 and which is assigned job number 2. For instance, if the order with quantity 1 is displayed in line 1 of the grid, Job **[your initials]00000001** will normally be the quantity 1 job.

5. Click the **calendar** icon in the **Process Through Date** field. A calendar displays with the current month and year visible.
6. Click the **[last day of the next month]** on the calendar. The **Process Through Date** field populates.
7. Click the **Process Through** button. **Note:** all lines in the grid are now selected.

Part 3: Verify that jobs are ready

1. Verify that the **Ready** check box is selected for both orders.
 - Use the **scroll bar** at the bottom of the Material Planner Workbench form to scroll right until the Ready check box is visible.

Note: The Ready check box indicates whether a demand has any component shortages in the APS plan. A component shortage is defined as not having enough quantities available. If there are no shortages, the Ready check box is selected. If shortages exist, the check box is cleared.

Part 4: Create jobs

1. Click the **Generate Orders** button. The **Material Planner Workbench Firm Job (Modal)** form opens.
2. Type **[your initials]** in the **Job Prefix** field.
3. Click the **OK** button. A dialog box opens with the message, "2 Planner's Workbench Record(s) were processed. 2 JOB(s) were created."
4. Click the **OK** button.
5. Click the **Window** drop-down arrow in the **Menu** bar.
6. Click the **Close All** menu item.

Exercise 6.3: View jobs

In this exercise, you will view the jobs that were created on the Material Planner Workbench and verify the bill of material copied over.

Before you begin:

- Ensure you have completed Exercise 6.2 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Verify job data

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *job orders* in the **Filter** field.
3. Click the **web.JobOrders** list item.
4. Click the **OK** button. The **Job Orders** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Job** field.
7. Click the **Filter in Place** icon. Your two jobs display in the grid.
8. Click **[your first job]** in the grid.
9. Use the values listed in the table below to verify data for each job.

Note: if the jobs were listed in the opposite order on the Material Planner Workbench in Exercise 6.2, the Released field for the first job will display 1 instead of 100.

Field	Value	Value
Item	[your Initials]-FG-01	[your Initials]-FG-01
Released	100 (this is the amount ordered on the customer order)	1 (this is the amount ordered on the customer order)
Status	Firm	Firm
Job Date	Current date	Current date

10. Write down your job number and quantity for each job _____. This is important for future exercises.
11. Click the **Reference** menu item.
12. Verify that the **Destination** field displays **Inventory**.

Part 2: Verify operations and material data for the job with a quantity of 1

1. Click the job **[your initials]00000001** in the grid.
2. Click the **Operations** menu item. The **Job Operations (Linked)** form opens. The two operations records for this job display in the grid.
3. Click the record for **Operation 10, WC [your initials]-Cut**.
4. Use the values in the table below to verify data for this operation.

Field	Value
Item	[your Initials]-FG-01
Operation	10
WC	[Your Initials]-Cut
Machine hours per piece	.10
Labor Hours per Piece	N/A
Setup	1.0
Control Point	Selected

5. Click the **Materials** menu item. The **Job Materials (Linked)** form opens. The material record for this job operation displays in the grid.
6. Use the values in the table below to verify material data for this operation.

Field	Value
Item	[your Initials]-FG-01
Operation	10
Material	[Your Initials]-PP-02
Qty	1.0
U/M	FT
Cost	2.00
Scrap factor	0.1

Note: The BOM was copied over when you generated the Job Order from the Material Planner Workbench in Exercise 6.2.

7. Click the **Window** drop-down arrow in the **Menu** bar.
8. Click the **Close All** menu item.

Count To Correct process

Cycle counting is a method for taking stock of what is in your inventory. Cycle counting is accomplished by taking periodic counts of what is actually in stockrooms. Cycle counting allows you to count a limited range of items at a time, instead of having to lock down the warehouse.

Process diagram

The overall business process is shown in the diagram below.

Count To Correct business process diagram

Note: This process is not covered in this course. Please refer to the course **CloudSuite Industrial: Managing Inventory** for more information.

Check your understanding

What is one of the components of the Plan To Inventory process?

- a) Correct To Count
- b) Count To Correct
- c) Replenish To Plan
- d) Sales Order To Shipping

In Syteline you will have to choose which planning engine to use for your planning output. What method are we using in this class?

- a) MPR
- b) APS
- c) MRP
- d) ASP

What is one benefit using the Material Planner Workbench?

- a) Jobs are automatically created for you.
- b) Workbench is by created for each planner code.
- c) Workbench is automatically created after you run planning.
- d) Workbench consolidates all your plans by your planner code.

Once APS is generated, what is the next step prior to viewing the Material Planner Workbench?

- a) Material Planner Workbench Generation
- b) APS mode
- c) APS Planning Detail
- d) APS Planning

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 7: Demand To Build

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to identify the steps in the Demand To Build process. In this lesson, you will:

- Identify the components of the Demand To Build business process.
- Identify the two different Plan To Schedule processes.
- Describe the flow of completing jobs
- Describe customer order shipping.
- Identify resources to review the system impacts of Demand To Build business processes.

Topics

- Demand To Build business process overview
- Demand To Plan process
- Plan To Schedule process
- Schedule To Build process

Demand To Build business process overview

The Demand To Build business process encompasses all the steps involved in recording demand, planning, scheduling, and manufacturing to satisfy the recorded demand.

Demand To Build business process diagram

There are three main components of the Demand To Build business process, as shown in the diagram above, with the Plan To Schedule component being broken down between procurement and production elements. This lesson will focus on the Plan To Schedule and Schedule To Build components of the process.

Key capabilities

The Demand To Build business process is supported by a variety of functions within Syteline to do the following:

- Analyze demand
- Generate material plan
- Schedule shop floor
- Manufacture items to satisfy demand

Related courses

For more information about the Demand To Build processes and associated tasks, please refer to the courses **CloudSuite Industrial: Using Job Orders** and **Syteline: Using Advanced Planning and Scheduling (APS) in Production Planning**.

Demand To Plan process

The Demand To Plan process flow includes all the steps to record demand from different sources, calculate project dates for incremental planning, and analyze demand for production planning.

Demand planning can be incremental or disruptive. Incremental planning appends to the last generated APS plan whereas disruptive planning regenerates a new plan.

Process diagram

The overall business process is shown in the diagram below.

Demand To Plan business process diagram

Note: The APS Planning module is used for the Smartwatch scenario in this course. However, the course does not cover the Demand To Plan process in detail. Please see the **SyteLine: Using Advanced Planning and Scheduling (APS) in Production Planning** course for more information.

Plan To Schedule process

The Plan To Schedule process covers all the activities involving analyzing the APS plan, resolving capacity issues, production planning, resolving supplier issues and adjusting demand to meet due dates.

Demand can be met through procurement and/or production. Each of these process flows is described separately below.

Plan To Schedule - Procurement

The Plan To Schedule - Procurement process flow includes all activities for planning for procurement. Materials can be both purchased and transferred, and depending on the source corresponding supply channels should be applied. This process also deals with exceptions involving move ins/move outs and expediting POs with vendors.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Plan To Schedule – Procurement business process diagram

The Plan To Schedule - Procurement process typically includes the following steps:

- Demands and promise orders are created during order entry and other daily activities.
- The APS Planning activity runs nightly to generate planned orders to fill unsatisfied demand quantity.
- The buyer or planner analyzes the planning output to determine the causes for any lateness.
 - If late orders cannot be resolved, demand may need to be adjusted. In this case, APS Planning is run again to generate a new plan.
- The buyer or planner generates the Material Planner Workbench to generate and release a PO to ensure that items are available when needed.

Plan To Schedule - Production

The Plan To Schedule - Production process flow includes the activities for generating production orders to satisfy demand. This process also involves generating the corresponding paperwork and making any planning adjustments if necessary.

The tasks of the production planner include analyzing demand, reviewing exception messages, identifying bottlenecks, and resolving capacity issues.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Plan To Schedule – Production business process diagram

The Plan To Schedule - Production process usually includes the following steps:

- Demands and promise orders are created during order entry and other daily activities.
- The APS Planning activity runs nightly to generate planned orders to fill unsatisfied demand quantity.
- The buyer or planner analyzes the planning output to determine the causes for any lateness.
 - Any material shortages or capacity issues are reviewed and resolved.
 - If late orders cannot be resolved, demand may need to be adjusted. In this case, APS Planning is run again to generate a new plan.
- The buyer or planner generates the Material Planner Workbench to generate and release job orders to ensure that items are available when needed.

The Schedule To Build process includes all the activities involving releasing jobs to the shop floor, shop floor scheduling, resolving capacity constraints, manufacturing and outside processing.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Schedule To Build business process diagram

Activities that generally take place during the Schedule To Build process include the following:

- After job orders are released to the shop floor, job paperwork is generated and distributed to the appropriate work centers.
- Job materials are issued to the corresponding job operation.
- Job operation transactions are recorded, including:
 - Setup, move, and run duration
 - Pieces completed or scrapped
 - Materials moved to the next operation
 - Finished goods moved to inventory
 - Operation completion
- Job transactions are posted and costs are recorded.
- Completed items are put into stock.

Scenario: Completing jobs and shipping orders

Now all the pieces are in place for Progressive Cycles to manufacture and ship the new Smartwatch product. Your purchased materials are in inventory, and your job orders have been created. In the following exercises, you will first release the jobs and print the job paperwork. From there you will issue job materials and record job transactions, followed by posting the job transactions. When the jobs are complete, you will ship the customer orders.

Exercise 7.1: Release jobs

In this exercise, you will release the jobs generated previously from the Material Planner Workbench and print the related job paperwork.

Before you begin:

- Ensure you have completed Exercise 6.3 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Release Jobs

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *job orders* in the **Filter** field.
3. Click the **web.JobOrders** list item.
4. Click the **OK** button. The **Job Orders** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Job** field.
7. Click the **Filter in Place** icon. Your two jobs display in the grid.
8. Click the job **[your initials]00000001** in the grid.
9. Click the **Status** drop-down arrow.
10. Click the **Released** list item.
11. Click the grid entry for job **[your initials]00000002**.
12. Click the **Status** drop-down arrow.
13. Click the **Released** list item.
14. Click the **Save** icon. A dialog box opens with the message, "[Item [your initials]-FG-01] is Non-Compliance for [Compliance Program ID: REACH]. [Item [your initials]-FG-01] is Non-Compliance for [Compliance Program ID: RoHS]."
15. Click the **OK** button.
16. Click the **X** on the **Job Orders** form.

Part 2: Print Job Paperwork

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.

2. Type *job packet* in the **Filter** field.
3. Click the **Job Packet** list item.
4. Click the **OK** button. The **Job Packet** form opens.
5. Verify that the **Job Header**, **Operation Listing**, and **Material Pick List** report check boxes are selected in the Print section.
6. Type *[your initials]1* in the **Job Starting** field.
7. Type *[your initials]2* in the **Job Ending** field.
8. Click to select the **Dates** check box under **Job Header**.
9. Click to select the **Dates** check box under **Operation Listing**.
10. Click to select the **Hours** check box under **Operation Listing**.
11. Click the **Print** button. The selected **Job Packet** reports open in new tabs.
12. Review each report.
 - The **Job Header Report** displays job status, quantities, and start and end dates for each job.
 - The **Job Operation Listing Report** displays information from the BOM for each job, including operations and materials required.
 - The **Job Material Pick List Report** displays details about the materials to be picked for each job.
13. Click the **X** on each report tab to close. A dialog box opens with the message, "Report Submitted".
14. Click the **OK** button. The **Job Packet** form displays.
15. Click the **X** on the **Job Packet** form.

Exercise 7.2: Print Resource Group Dispatch List report

In this exercise, you will first re-run APS to generate updated planning data. Then you will view the Resource Group Dispatch List Report, which displays the demand assignments for a resource (or for all resources in a group) in the sequence in which they should be performed on the shop floor. This report is typically provided to the shop floor each day to execute the planned schedule.

Before you begin:

- Ensure you have completed Exercise 7.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Update Planning Parameters

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *planning parameters* in the **Filter** field.

3. Click the **Planning Parameters** list item.
4. Click the **OK** button. The **Planning Parameters** form opens.
5. Click the **APS** tab.
6. Verify the **Use Planning Output for Scheduling** check box is selected. If not, follow these steps:
 - a. Click the **Use Planning Output for Scheduling** check box to select.
 - b. Click the **Save** icon.
7. Click the **X** on the **Planning Parameters** form.

Part 2: Run APS Planning

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *aps planning* in the **Filter** field.
3. Click the **APS Planning** list item.
4. Click the **OK** button. The **APS Planning** form opens.
5. Click the **Perform Single Site Plan** radio button.
6. Click the **Plan** button. A dialog box opens with the message, "Task Submitted".
7. Click the **OK** button.
8. Click the **X** on the **APS Planning** form.

Part 3: Verify successful completion

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *background task* in the **Filter** field.
3. Click the **Background Task History** list item.
4. Click the **OK** button. The **Background Task History** form opens.
5. Click the **Filter in Place** icon.
6. Click the top item in the grid, **Planning**.
7. Confirm **Task Succeeded** displays in the **Return Status** field.

Note: You will need to click the **Refresh** icon to refresh the current collection until this message appears. This may take several minutes to complete.

Do **not** proceed to the next step until the **Task Succeeded** message appears. The Material Planner Workbench data will not populate until the Planning task finishes.

8. Click the **X** on the **Background Task History** form.

Part 4: Preview Resource Group Dispatch List Report

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *resource group* in the **Filter** field.

3. Click the **Resource Group Dispatch List Report** list item.
4. Click the **OK** button. The **Resource Group Dispatch List Report** form opens.
5. Type *[your initials]-SW-L1* in the **Resource** field in the **Starting** column.
6. Type *[your initials]-SW-M1* in the **Resource** field in the **Ending** column.
7. Click the calendar icon in the **Schedule Date** field in the **Starting** column.
8. Click the **Today** button. The current date populates in the starting **Schedule Date** field.
9. Click the calendar icon in the **Schedule Date** field in the **Ending** column.
10. Click **[the last day of the next month]** in the calendar. The **Ending Schedule Date** populates.
11. Click the **Preview** button. The **Resource Group Dispatch List Report** opens in a new tab. Note each resource group information, which displays the Resource, Start and End dates, Jobs and Prev WC or Next WC.
12. Click the **X** to close the report tab.
13. Click the **X** on the **Resource Group Dispatch List Report** form.

Exercise 7.3: Issue job materials

In this exercise, you will issue materials for completing your jobs. This process will move materials from inventory to work in process.

Before you begin:

- Ensure you have completed Exercise 7.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Issue job materials

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *job material transactions* in the **Filter** field.
3. Click the **Job Material Transactions** list item.
4. Click the **OK** button. The **Job Material Transactions** form opens.
5. Type *[your initials]** in the **Job** field.
6. Click the **Job** drop-down box.
7. Click the **[your first job number]** list item.
8. Press **Tab** to move to the next field. Information about your first job will populate, including a list of all operations and required material.
9. Click the **Select All** button.

10. Click the **Process** button. A dialog box opens with the message, “3 Job Material Transactions(s) were posted.”
11. Click the **OK** button.
12. Type *[your initials]** in the **Job** field.
13. Click the **Job** drop-down box.
14. Click the **[your second job number]** list item.
15. Press **Tab** to move to the next field. The form refreshes to display information about your second job.
16. Click the **Select All** button.
17. Click **Process**. A dialog box opens with the message, “3 Job Material Transactions(s) were posted.”
18. Click the **OK** button.
19. Click the **X** on the **Job Material Transactions** form.

Part 2: View job materials

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *job materials* in the **Filter** field.
3. Click the **web.JobMaterials** list item.
4. Click the **OK** button. The **Job Materials** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Job** field.
7. Click the **Filter in Place** icon. Each material record for both of your jobs displays in the grid.
8. Click the **Accum Values** menu item.
9. Verify that the **Qty Issued** field is updated for all your materials.

Note: The material cost shows here as well. This reflects the additional material required due to the **Scrap Factor** applied to the item **[your initials]-PP-02**.

10. Click the **X** on the **Job Materials** form.

System impacts: issue jobs

The forms that can be reviewed to verify the actions taken during a job order issuing transaction are identified in the following table.

Form	Field or item to review
Job Orders – Cost Detail	Verify WIP Matl Total cost field shows a value

Form	Field or item to review
Job Materials – Accum Values	Verify Qty Issued field has correct values
Job Materials Listing	Verify Qty Issued
Items	Verify Quantity On Hand decreased for purchased material
Item Stockroom Locations	Verify Location On Hand decreased in stock location
Journal Entries – SF Dist	In the reference column note the INV JOI (Inventory Job order issue) for the job, the debit to WIP Material, and credit to Inventory Material
Job Exception Report	Verify actual quantity equals planned for each material

Troubleshooting issuing material

If you are unable to issue materials to the job, verify the job Status is Released.

- Job Orders – manually change the status to Released

Exercise 7.4: Enter unposted job transactions for Job 1 – quantity of 1

In this exercise, you will use the Unposted Job Transactions form to create an editable list of shop floor control, labor, machine, and move-to-stock transactions. This feature allows you to review transactions before posting them to job orders.

Before you begin:

- Ensure you have completed Exercise 7.3 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Verify Shop Floor Control Parameters

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *shop floor* in the **Filter** field.
3. Click the **Shop Floor Control Parameters** list item.
4. Click the **OK** button. The **Shop Floor Control Parameters** form opens.
5. Click the **Transactions** tab. Verify **Job Stock Transaction** is selected. If not, follow these steps:
 - a. Click the **Job Stock Transaction** check box to select.

- b. Click the **Save** icon.
6. Click the **X** on the **Shop Floor Control Parameters** form.

Part 2: Record setup hours for Job 1

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *unposted job transactions* in the **Filter** field.
3. Click the **Unposted Job Transactions** list item.
4. Click the **OK** button. The **Unposted Job Transactions** form opens.
5. Click the **Filter in Place** icon.
6. Click the **New** icon.
7. Click the **Transaction Type** drop-down arrow.
8. Click the **Setup** list item.
9. Type *[your initials]** in the **Job** field.
10. Click the **Job** drop-down box.
11. Click **[your job number for quantity 1]** list item.
12. Press **Tab** to move out of the field.
13. Verify **Operation 10** displays in the **Operation** field. If not, follow these steps:
 - a. Click the **Operation** drop-down arrow.
 - b. Click the **10** list item.
14. Click the **Employee** drop-down arrow.
15. Click the **[your initials]00000001** list item.
16. Type *1* in the **Total Hours** field.

Part 3: Record machine hours for Job 1

1. Click the **New** icon.
2. Click the **Transaction Type** drop-down arrow.
3. Click the **Machine** list item.
4. Verify **[your job number for quantity 1]** displays in the **Job** field.
5. Verify **10** displays in the **Operation** field. If not, follow these steps:
 - a. Click the **Operation** drop-down arrow.
 - b. Click the **10** list item.
6. Type *1* in the **Completed** field.
7. Type *.1* in the **Total Hours** field.
8. Click to select the **Oper Complete** check box.

Part 4: Record run hours for Job 1

1. Click the **New** icon.
2. Click the **Transaction Type** drop-down arrow.

3. Click the **Run** list item.
4. Verify **[your job number for quantity 1]** displays in the **Job** field.
5. Click the **Operation** drop-down arrow.
6. Click the **20** list item.
7. Click the **Employee** drop-down arrow.
8. Click the **[your initials]00000002** list item.
9. Type **1** in the **Completed** field.
10. Press **Tab**. A dialog box opens with the message, "Completed is greater than Qty Required for Job Operation that has [Oper: 20]. Qty Required is 0.00000000."

Note: This message displays because the operation has not yet been posted. In a production environment, job posting is normally performed before hours are recorded.

11. Click the **OK** button.
12. Type **.5** in the **Total Hours** field.
13. Click to select the **Oper Complete** check box.
14. Click to select the **Close Job** check box.
15. Click the **Save** icon. A dialog box opens with the message, "Complete? is equal to No for Job Operation that has [Oper: 10]."

Note: Again, this message displays because the operation has not yet been posted.

16. Click the **OK** button. An **Add Lot (Modal)** form opens. This allows you to add a manufactured date and a transaction restriction code if required. Note the **Lot** number displayed on this form, as you will need this information during the order shipping process.
17. Click the **OK** button.
18. Click the **Save** icon. A dialog box opens with the message, "Complete? is equal to No for Job Operation that has [Oper: 10]."

Note: Again, this message displays because the operation has not yet been posted.

19. Click the **OK** button. Your three job transactions are saved.
20. Click the **X** on the **Unposted Job Transactions** form.

Exercise 7.5: Enter unposted job transactions for Job 2 – quantity of 100

In this exercise, you will use the Unposted Job Transactions form to create an editable list of shop floor control, labor, machine, and move-to-stock transactions. This feature allows you to review transactions before posting them to job orders.

Before you begin:

- Ensure you have completed Exercise 7.3 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Part 1: Record setup hours for Job 2

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *unposted job transactions* in the **Filter** field.
3. Click the **Unposted Job Transactions** list item.
4. Click the **OK** button. The **Unposted Job Transactions** form opens.
5. Click the **Filter in Place** icon.
6. Click the **New** icon.
7. Click the **Transaction Type** drop-down arrow.
8. Click the **Setup** list item.
9. Type *[your initials]** in the **Job** field.
10. Click the **Job** drop-down box.
11. Click the **[your job number for quantity 100]** list item.
12. Press **Tab** to move out of the field.
13. Verify **Operation 10** displays in the **Operation** field. If not, follow these steps:
 - a. Click the **Operation** drop-down arrow.
 - b. Click the **10** list item.
14. Click the **Employee** drop-down arrow.
15. Click the **[your initials]00000001** list item.
16. Type **1** in the **Total Hours** field.

Part 2: Record machine hours for Job 2

1. Click the **New** icon.
2. Click the **Transaction Type** drop-down arrow.
3. Click the **Machine** list item.
4. Verify **[your job number for quantity 100]** displays in the **Job** field.
5. Verify **10** displays in the **Operation** field. If not, follow these steps:
 - a. Click the **Operation** drop-down arrow.

- b. Click the 10 list item.
6. Type *100* in the **Completed** field.
7. Type *10* in the **Total Hours** field.
8. Click to select the **Oper Complete** check box.

Part 3: Record run hours for Job 2

1. Click the **New** icon.
2. Click the **Transaction Type** drop-down arrow.
3. Click the **Run** list item.
4. Verify **[your job number for quantity 100]** displays in the **Job** field.
5. Click the **Operation** drop-down arrow.
6. Click the **20** list item.
7. Click the **Employee** drop-down arrow.
8. Click the **[your initials]00000002** list item.
9. Type *100* in the **Completed** field.
10. Press **Tab**. A dialog box opens with the message, "Completed is greater than Qty Required for Job Operation that has [Oper: 20]. Qty Required is 0.00000000."

Note: This message displays because the operation has not yet been posted. In a production environment, job posting is normally performed before hours are recorded.

11. Click the **OK** button.
12. Type *50* in the **Total Hours** field.
13. Click to select the **Oper Complete** check box.
14. Click to select the **Close Job** check box.
15. Click the **Save** icon. A dialog box opens with the message, "Complete? is equal to No for Job Operation that has [Oper: 10]."

Note: This message displays because the operation has not yet been posted.

16. Click the **OK** button. An **Add Lot (Modal)** form opens. This allows you to add a manufactured date and a transaction restriction code if required. Note the **Lot** number displayed on this form, as you will need this information during the order shipping process.
17. Click the **OK** button.
18. Click the **Save** icon. A dialog box opens with the message, "Complete? is equal to No for Job Operation that has [Oper: 10]."

Note: Again, this message displays because the operation has not yet been posted.

19. Click the **OK** button. Your three job transactions are saved.

20. Click the **X** on the **Unposted Job Transactions** form.

Exercise 7.6: Post job transactions

In this exercise, you will post and view your job transactions. Posting the jobs moves the completed Smartwatch product into inventory.

Before you begin:

- Ensure you have completed Exercise 7.4 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: View unposted job transactions

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *unposted job transactions* in the **Filter** field.
3. Click the **Unposted Job Transactions** list item.
4. Click the **OK** button. The **Unposted Job Transactions** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Job** field.
7. Click the **Filter in Place** icon.
8. Use the table below to verify the correct values prior to posting.

Job	Transaction Type	Completed	Total Hours	Employee
[your job number for quantity 1]	Setup	0.00	1.000	[your initials]1
	Machine	1.00	0.100	
	Run	1.00	0.500	[your initials]2

Job	Transaction Type	Completed	Total Hours	Employee
[your job number for quantity 100]	Setup	0.00	1.000	[your initials]1
	Machine	100.00	10.000	
	Run	100.00	50.000	[your initials]2

Part 2: Post job transactions

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *post job* in the **Filter** field.
3. Click the **Post Job Transactions** list item.
4. Click the **OK** button. The **Post Job Transactions** form opens.
5. Click to select the **Post Complete Transactions** check box.
6. Type [your initials]1 in the **Job** field in the **Starting** column.
7. Type [your initials]2 in the **Job** field in the **Ending** column.
8. Click the **Process** button. A dialog box opens with the message, "[Post Job Transactions] will be performed."
9. Click the **OK** button. A dialog box opens with the message, "[Post Job Transaction(s)] was successful."
10. Click the **OK** button.
11. Click the **X** on the **Post Job Transactions** form.
12. Click the **X** on the **Unposted Job Transactions** form.

System impacts: job transactions

The forms that can be reviewed to verify the actions taken during a job transaction are identified in the following table.

Form	Field or item to review
Job Orders – Cost Detail	Verify cost in WIP Labor field and Ovhd fields
Job Operations – Accum Values	Review Quantities, Hours and Costs
Job Transactions	Review setup, run and machine transactions for each job

Form	Field or item to review
Items	Verify Quantity On Hand for Smartwatch is updated
Journal Entries – SF Dist	In the reference column note the: • INV JOL (Inventory Job order labor) for the job • Debit to WIP Labor and Overhead • Credit to Applied Labor and Overhead
Job Exception Report – include Show Detail	Verify Actual Costs for Setup and Run time for each job operation
WIP Valuation Report	Verify costs increased in WIP Total
Material Transactions	Verify Transaction Type of Finish for each job

Exercise 7.7: Ship customer orders

In this exercise, you will process and review customer order shipments.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Ship customer order 1

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *order shipping* in the **Filter** field.
3. Click the **Order Shipping** list item.
4. Click the **OK** button. The **Order Shipping** form opens.
5. Type *[your initials]1* in the **Order** field.
6. Press **Tab** to move out of field.
7. Verify that the **Lot** number is the same as the Lot number assigned to the job with quantity 1 in Exercise 7.4. If not, follow these steps:
 - a. Click the **Lot** drop-down arrow.
 - b. Click the **1.00** list item.
8. Click the **Actions** drop-down arrow on the menu bar.

9. Click the **Edit Freight Charges** menu item. The **Edit Freight Charges (Modal)** form opens.
10. Type 25 in the **Freight** field.
11. Click the **OK** button. The **Edit Freight Charges (Modal)** form closes. The **Order Shipping** form displays.
12. Click the **Select All** button.
13. Click the **Process** button. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."
14. Click the **OK** button.

Part 2: Ship customer order 2

1. Type *[your initials]*2 in the **Order** field.
2. Press **Tab** to move out of field.
3. Verify that the **Lot** number is the same as the Lot number assigned to the job with quantity 100 in Exercise 7.4. If not, follow these steps:
 - a. Click the **Lot** drop-down arrow.
 - b. Click the quantity **100.00** list item.
4. Click the **Actions** drop-down arrow on the menu bar.
5. Click the **Edit Freight Charges** menu item. The **Edit Freight Charges (Modal)** form opens.
6. Type 50 in the **Freight** field.
7. Click the **OK** button. The **Edit Freight Charges (Modal)** form closes.
8. Click the **Select All** button on the **Order Shipping** form.
9. Click the **Process** button. A dialog box opens with the message, "1 Shipping Transaction(s) were posted."
13. Click the **OK** button.
14. Click the **X** on the **Order Shipping** form.

System impacts: ship orders

The forms that can be reviewed to verify what occurred during a customer order shipping transaction are identified in the following table.

Form	Field or item to review
Customer Order Lines – Detail	Status field = Filled
Customer Order Lines - Shipping	Quantity Shipped field = quantity shipped for each CO shipment
Items	Quantity On Hand field = 0
Customer Order Listing	Verify customer order shipments are listed

Form	Field or item to review
Item Lot Locations	Filter MAIN Warehouse and Item. No lot location will display
Journal Entries – CO Dist	In the reference column note the: • INV CSH (Inventory Customer shipment) for the customer order • Debit to COGS • Credit to Inventory
Material Transactions	Filter by Transaction Type – Ship and your Item number. • Verify shipment transactions are listed

Troubleshooting shipping an order

If you are unable to ship an order, verify the customer order Status is Ordered. **Note:** You cannot ship an order that is in Planned status.

- Customer Order Lines – manually change the status to Ordered

Check your understanding

Lesson 8: Financial Plan To Report

Estimated time

1 hour

Learning objectives

After completing this lesson, you will be able to describe the primary financial management functions in the Financial Plan To Report business process. In this lesson, you will:

- Identify the components of the Financial Plan To Report business process.
- Describe the flow of creating and processing customer invoices and payments.
- Describe the flow of creating, processing, and paying vendor POs.
- Describe how to enter and post journal entries.
- Identify resources to review the system impacts of the Financial Plan To Report business processes.

Topics

- Financial Plan To Report business process overview
- Invoice To Cash process
- Receipt To Payment process
- G/L Processing
- Cash To Reconciliation process
- Fixed Asset To Disposal process
- Financial Reporting and Closing process

Financial Plan To Report business process overview

The Financial Plan To Report business process helps organizations manage all their financial activities. These processes involve making journal entries, receiving customer payments, making vendor payments, bank reconciliation and financial reporting.

Financial Plan To Report business process diagram

There are eight main components of the Financial Plan To Report business process, as shown in the diagram above. This lesson focuses on the General Ledger process, Invoice To Cash, and Receipt To Payment components, outlined on the diagram.

Key capabilities

The Financial Plan To Report business process is supported by a variety of functions within SyteLine to do the following:

- Process customer payments
- Process vendor payments
- Reconcile banking statements with expenses and revenue
- Print financial statements

Related courses

For more information about the Financial Plan To Report processes and associated tasks, please refer to the courses **SyteLine: Managing the General Ledger**, **SyteLine: Using Accounts Payable**, **SyteLine: Using Accounts Receivable**, **CloudSuite Industrial: Managing Fixed Assets**, and **SyteLine: Using the Excel Financial Reporting Toolset**.

Invoice To Cash process

The Invoice To Cash process includes all the activities required to create and process customer invoices, credits, and payments. This process starts with generating invoices and includes sending invoices to customer, receiving customer payments, applying payments to invoices, and reconciling revenue with bank statements.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Invoice To Cash business process diagram

Following are some of the activities that usually take place during the Invoice To Cash process:

- On the scheduled billing date, finance personnel generate invoices for all orders that have been shipped but not yet paid.
- When invoices are printed from the Order Invoicing/Credit Memo form, SyteLine performs the following functions:
 - Computes the invoice amounts
 - Updates the customer sales and invoicing fields
 - Calculates a commission due amount
 - Posts the invoice to invoice history
 - Creates Accounts Receivable invoice transactions
 - Prints the invoice
- Once the invoices are generated, they are posted to the A/R Distribution journal using the Invoice Posting form.
- Next, the invoices are sent to the customer.
- At this point, customer payments can be received by check, cash, credit card or any other electronic payment method.
 - All customer payments are entered in the system and are applied to open invoices.
- The customer payments are posted. The corresponding transactions are recorded in the A/R Distribution Journal.

Scenario: Processing customer invoices

Now it's time to get paid for the Smartwatch orders shipped out to customers. In the following exercises, you will generate and post invoices. You will then review the receivables aging report, which allows you to identify late payments. Finally, you will receive and post customer payments.

Exercise 8.1: Order Invoicing and Posting

In this exercise, you will invoice and post your customer orders.

Before you begin:

- Ensure you have completed Exercise 7.7 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Print invoices

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *order invoicing* in the **Filter** field.
3. Click the **Order Invoicing/Credit Memo** list item.
4. Click the **OK** button. The **Order Invoicing/Credit Memo** form opens.
5. Type *[your initials]1* in the **Order Line/Release** field in the **Starting** column.
6. Type *[your initials]2* in the **Order Line/Release** field in the **Ending** column.
7. Click the **Process** button. A dialog box opens with the message "[Print Order Invoicing/Credit Memo] will be performed."
8. Click the **OK** button. A dialog box opens with the message, "Report Submitted".
9. Click the **OK** button.
10. Click the **A/R Invoices** button. The **Invoices, Debit and Credit Memos (Filter in Place)** form opens.
11. Click the **Filter in Place** icon.
12. Verify your two customer invoices display in the grid.
13. Click the **Window** drop-down arrow in the **Menu** bar.
14. Click the **Close All** menu item.

Part 2: Post invoices

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *invoice posting* in the **Filter** field.
3. Click the **Invoice Posting** list item.
4. Click the **OK** button. The **Invoice Posting** form opens.

5. Type *[your initials]1* in the **Customer** field in the **Starting** column.
6. Type *[your initials]2* in the **Customer** field in the **Ending** column.
7. Click the **Process** button. A dialog box opens with the message, "[Invoice Transaction Report] will be printed."
8. Click the **OK** button. The **Invoice Transaction Report** opens in a new tab.
9. Review the report.
10. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
11. Click the **OK** button. The **Invoice Posting** form displays.
12. Click the **Commit** radio button.
13. Click the **Process** button. A dialog opens box with the message, "[Invoice Posting] will be performed."
14. Click the **OK** button. A dialog box opens with the message, "2 A/R Invoice(s) were posted. "
15. Click the **OK** button.
16. Click the **X** on the **Invoice Posting** form.

Exercise 8.2: Print Accounts Receivable Aging Report

In this exercise, you will generate and review the Accounts Receivable Aging Report.

Before you begin:

- Ensure you have completed Exercise 8.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *accounts receivable aging* in the **Filter** field.
3. Click the **Accounts Receivable Aging Report** list item.
4. Click the **OK** button. The **Accounts Receivable Aging Report** form opens.
5. Type *[your initials]1* in the **Customer** field in the **Starting** column.
6. Type *[your initials]2* in the **Customer** field in the **Ending** column.
7. Click the **Print** button. The **Accounts Receivable Aging Report** opens in a new tab.
Review the report.
8. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
9. Click the **OK** button. The **Accounts Receivable Aging Report** form displays.
10. Click the **X** on the **Accounts Receivable Aging Report** form.

Exercise 8.3: Apply and post customer payments

In this exercise, you will receive, apply, post and review customer payments.

Before you begin:

- Ensure you have completed Exercise 8.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Enter customer payments

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *a/r payments* in the **Filter** field.
3. Click the **web.ARPayments** list item.
4. Click the **OK** button. The **A/R Payments** form opens.
5. Click the **New** icon.
6. Click the **Customer** drop-down arrow.
7. Click the **[your initials]00001** list item.
8. Type 43875 in the **Number** field.
9. Type 325 in the **Amount** field.
10. Click the **New** icon.
11. Click the **Customer** drop-down arrow.
12. Click the **[your initials]00002** list item.
13. Type 51477 in the **Number** field.
14. Type 30,050 in the **Amount** field.
15. Click the **Save** icon.
16. Click the **X** on the **A/R Payments** form.

Part 2: Apply customer payments

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *a/r quick payments* in the **Filter** field.
3. Click the **web.ARQuickPaymentApplication** list item.
4. Click the **OK** button. The **A/R Quick Payment Application** form opens.
5. Click the **Filter in Place** icon.
6. Type *[your initials]** in the **Customer** field.
7. Click the **Filter in Place** icon. Your customer payments from **Part 1** display in the grid.
8. Click the **[first customer payment]** in the grid.

- Click the **Select All** button. **Note:** This button is found in the lower part of the form.

Note: The amount and the applied amount will be equal, and the remaining amount will be zero.

- Click the **Apply** button. A dialog box opens with the message, "0 A/R Payment Distribution(s) were changed. 1 AR Payment Distribution(s) were created. 0 A/R Payment Distribution(s) have been removed."
- Click the **OK** button.
- Click the **[second customer payment]** in the grid.
- Click the **Select All** button.

Note: Again, the amount and the applied amount will be equal, and the remaining amount will be zero.

- Click the **Apply** button. A dialog box opens with the message, "0 A/R Payment Distribution(s) were changed. 1 AR Payment Distribution(s) were created. 0 A/R Payment Distribution(s) have been removed."
- Click the **OK** button.
- Click the **X** on the **A/R Quick Payment Application** form.

Part 3: Post customer payments

- Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
- Type *a/r payment posting* in the **Filter** field.
- Click the **A/R Payment Posting** list item.
- Click the **OK** button. The **A/R Payment Posting** form opens.
- Click the **Customer** drop-down arrow in the **Starting** column.
- Click the **[your initials]00000001** item.
- Click the **Ending Customer** drop-down arrow.
- Click the **[your initials]00000002** item.
- Click the **Process** button. The **A/R Payment Posting Report** opens in a new tab.
- Verify that both the invoice and the payment transaction display for each customer.
- Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
- Click the **OK** button. The **A/R Payment Posting** form displays.
- Click the **Commit** radio button.
- Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
- Click the **OK** button. A dialog box opens with the message, "2 Payment(s) were posted."
- Click the **OK** button.

17. Click the **X** on the **A/R Payment Posting** form.

System impacts: invoicing and applying payments

The forms that can be reviewed to verify what occurred during invoicing and payment application is identified in the following table.

Form	Field or item to review
Journal Entries – AR Dist	In the reference column note the ARI (Accounts Receivable Invoice) for the customer, the debit to Accounts Receivable and credit to Sales and Freight Revenue. In the reference column note the ARP (Accounts Receivable Payment) for the customer, the debit to Cash and credit to Accounts Receivable.
A/R Posted Transactions Detail	Verify you have two records, one with Type of Invoice and the other with Type of Payment.

Receipt To Payment process

The Receipt To Payment process allows companies to manage the process of processing vendor payments, including creating and posting vouchers, generating and distributing payments, and printing and posting checks.

Process description

The overall business process is shown in the diagram below. The items outlined will be illustrated in the exercises which follow.

Receipt To Payment business process diagram

The Receipt To Payment process typically includes the following steps:

- The payment process begins when a vendor invoice is received.
- An A/P voucher is created to record the amount owed to the vendor using the Generate A/P Transactions form.
- The voucher amount is distributed to the appropriate accounts either automatically or manually.
- If authorization is required, the voucher is sent to the approver.
- The voucher is posted using the A/P Voucher Posting form.
- Payment generation can be processed immediately after posting, or it can wait until the next scheduled pay period. The Voucher Payables Report and/or the Accounts Payable Aging Report are used to select the vouchers to pay.
- Vendor checks are processed and printed from the A/P Check Printing/Posting form.
- Payments are posted from the A/P Check Printing/Posting form.

Scenario: Processing vendor payments

Progressive Cycles has been billed by its vendors for the purchased Smartwatch components. In the following exercises, you will generate the accounts payable transactions associated with these vendor invoices, and post the A/P vouchers. You will then run the payables aging report to illustrate how to monitor your outstanding obligations. Finally, you will pay the vendor invoices.

Exercise 8.4: Generate A/P transactions

In this exercise, you will record vendor invoices for the POs you created previously.

Before you begin:

- Ensure you have completed Exercise 5.6 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *generate a/p* in the **Filter** field.
3. Click the **Generate A/P Transactions** list item.
4. Click the **OK** button. The **Generate A/P Transactions** form opens.
5. Click to clear the **Find by Purchase Order Number** check box. **Note:** This activates the **Vendor** field and allows you to filter by vendor.
6. Type *[your initials]1* in the **Vendor** field.
7. Click the **Filter in Place** icon.
8. Type *8041* in the **Vendor Invoice** field.
9. Click the **PO Selection** tab. Your four PO lines for this invoice display.
10. Click to select the **Selected** check box for line 1.
11. Repeat step 10 for the remaining three lines.
12. Type *1739.48* in the **Material** field.
13. Click the **Generate** button. A dialog box opens with the message, "[Generate] will be performed."
14. Click the **OK** button. A dialog box opens with the message, "[Generate] was successful. Voucher is XXX."
15. Click the **OK** button.
16. Click the **General** tab.
17. Click the **Filter in Place** icon.
18. Type *[your initials]2* in the **Vendor** field.
19. Click the **Filter in Place** icon.
20. Type *5200* in the **Vendor Invoice** field.

21. Click the **PO Selection** tab. Your two PO lines for this invoice display.
22. Click to select the **Selected** check box for line 1.
23. Click to select the **Selected** check box for line 2.
24. Type 707.00 in the **Material** field.
25. Click the **Generate** button. A dialog box opens with the message, "[Generate] will be performed."
26. Click the **OK**. A dialog box opens with the message, "[Generate] was successful. Voucher is XXX."
27. Click the **OK** button.
28. Click the **X** on the **Generate A/P Transactions** form.

Exercise 8.5: Post A/P vouchers

In this exercise, you will post the vouchers for the A/P transactions generated previously.

Before you begin:

- Ensure you have completed Exercise 8.4 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *a/p voucher* in the **Filter** field.
3. Click the **A/P Voucher Posting** list item.
4. Click the **OK** button. The **A/P Voucher Posting** form opens.
5. Type *[your initials]1* in the **Vendor** field in the **Starting** column.
6. Type *[your initials]2* in the **Vendor** field in the **Ending** column.
7. Click the **Process** button. A dialog box opens with the message, "[A/P Voucher Posting] will be printed."
8. Click the **OK** button. The **A/P Voucher Posting Report** opens in a new tab.
9. Review the report.
10. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
11. Click the **OK** button. The **A/P Voucher Posting** form displays.
12. Click the **Commit** radio button.
13. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
14. Click the **OK** button. A dialog box opens with the message, "2 A/P Transaction(s) were posted."
15. Click the **OK** button.
16. Click the **X** on the **A/P Voucher Posting** form.

Exercise 8.6: Print Accounts Payable Aging Report

In this exercise, you will generate and review the aging report for payables, which allows you to check on outstanding vendor balances.

Before you begin:

- Ensure you have completed Exercise 8.5 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *accounts payable aging* in the **Filter** field.
3. Click the **Accounts Payable Aging Report** list item.
4. Click the **OK** button. The **Accounts Payable Aging Report** form opens.
5. Type *[your initials]1* in the **Vendor** field in the **Starting** column.
6. Type *[your initials]2* in the **Vendor** field in the **Ending** column.
7. Click to select the **Print All Posted Transactions** check box. **Note:** the **Print Open Payments** check box is now selected.
8. Click the **Print** button. The **Accounts Payable Aging Report** opens in a new tab.
9. Review the report.
10. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
11. Click the **OK** button. The **Accounts Payable Aging Report** form displays.
12. Click the **X** on the **Accounts Payable Aging Report** form.

Exercise 8.7: Pay vendor invoices

In this exercise, you will generate vendor payments and print A/P checks.

Before you begin:

- Ensure you have completed Exercise 8.5 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Generate payments

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *a/p payment generation* in the **Filter** field.

3. Click the **A/P Payment Generation** list item.
4. Click the **OK** button. The **A/P Payment Generation** form opens.
5. Type *[your initials]1* in the **Vendor** field in the **Starting** column.
6. Type *[your initials]2* in the **Vendor** field in the **Ending** column.
7. Click the **Process** button. A dialog box opens with the message, "2 A/P Payment Distribution(s) were created. 2 A/P Payment(s) were created".
8. Click the **OK** button.
9. Click the **X** on the **A/P Payment Generation** form.

Part 2: Print accounts payable checks

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *a/p check printing* in the **Filter** field.
3. Click the **A/P Check Printing/Posting** list item.
4. Click the **OK** button. The **A/P Check Printing/Posting** form opens.
5. Type *[your initials]1* in the **Vendor** field in the **Starting** column.
6. Type *[your initials]2* in the **Vendor** field in the **Ending** column.
7. Click the **Process** button. A dialog box opens with the message, "2 AP Payment(s) were processed. [Preliminary Check Register Report] will be performed."
8. Click the **OK** button. The **A/P Preliminary Check Register Report** opens in a new tab.
9. Review the report.
10. Click the **X** on the report tab to close. The **A/P Check Printing/Posting** form now displays the two checks to be printed.
11. Click the **Print A/P Checks** radio button.
12. Click the **Process** button. The check print PDF opens in a new tab.

Note: In a production environment, this is the point at which you would print the actual checks on check stock. For the purposes of this exercise, you will simply review the check output.

Review the checks to be printed.

13. Click the **X** on the report tab to close. A dialog box opens with the message, "2 Check(s) were processed. 0 Continuation(s) were processed."
14. Click the **OK** button.

Part 3: Post accounts payable checks

1. Click the **Final Register And Post** radio button.
2. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
3. Click the **OK** button. The **A/P Final Check Register** opens in a new tab.
4. Review the report.

5. Click the **X** on the report tab to close. A dialog box opens with the message, “[A/P Payment] was successful. 2 A/P Payment(s) were posted.”
6. Click the **OK** button.
7. Click the **X** on the **A/P Check Printing/Posting** form.

System impacts: vouchering and vendor payments

The forms that can be reviewed to verify what occurred during vouchering and vendor payment processing are identified in the following table.

Form	Field or item to review
Journal Entries – AP Dist	In the reference column note the APV (Accounts Payable Voucher) for the vendor, the debit to Vouchers Payable and credit to Accounts Payable. In the reference column note the APP (Accounts Payable Payment) for the vendor, a debit to Accounts Payable and a credit to Cash – Universal Checking. Since a discount was taken a credit to Purchase Discounts & Allowances is also shown.
A/P Posted Transactions Detail	Verify you have two records, one with a Type of Voucher and the other with a Type of Payment.

G/L Processing

The general ledger houses all transactional data for an organization. It allows the generation of financial statements and reports for management, auditors and investors. The general ledger is tied to other portions of the system through distribution journals and the chart of accounts.

As part of the basic setup of the SyteLine financial system, many basic parameters need to be established for transactional data to accurately be represented in the financial statements. In addition, proper setup of organizational accounting structure will allow users to take advantage of SyteLine functionality. The steps in this setup process are illustrated in the diagram below.

The chart of accounts defines account numbers utilized throughout the system to record and track transactional activity.

Process description

The overall business process is shown in the diagram below.

G/L Processing business process diagram

Transactional data captured through day-to-day operations is posted to distribution journals which are in turn posted to the general ledger. The following distribution journals are contained within SyteLine:

- Accounts Receivable
- Accounts Payable
- Fixed Assets
- Inventory
- Multi-site
- Payroll
- Purchasing
- Order Entry
- Shop Floor Control
- Currency Banking Journal
- Project Control

The general journal is used to post manual journal entries that are not the result of a system transactional flow. These can include accruals, adjusting entries, intercompany eliminations, etc.

Scenario: General ledger entries

Most general ledger processing occurs automatically as a result of operational transactions, such as generating POs or processing customer payments. Therefore, most of the exercises you completed earlier created distribution journal entries in the background. These various distribution journal entries are in turn posted to the general ledger. There are also situations where a manual general journal entry must be made, such as adjusting entries for month-end closing.

In the following exercises, you will create a new general journal entry to illustrate the manual journal entry process. You will also perform mass journal posting to illustrate one way that distribution journal entries can be posted to the general ledger.

Exercise 8.8: Create general journal entries

In this exercise, you will create a general journal entry to update the Petty Cash account.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *journal entries* in the **Filter** field.
3. Click the **Journal Entries** list item.
4. Click the **OK** button. The **Journal Entries (Filter in Place)** form opens.
5. Click the **Journal** drop-down arrow.
6. Click the **General** list item.
7. Click the **Filter in Place** icon. A dialog box opens with the message, "Not one Journal Transaction exists for General."
8. Click the **OK** button.
9. Type *10000* in the **Account** field.
10. Type *500* in the **Domestic Debit** field.
11. Click the **New** icon.
12. Type *10100* in the **Account** field.
13. Type *500* in the **Domestic Credit** field.
14. Click the **Save** icon.
15. Click the **X** on the **Journal Entries** form.

Exercise 8.9: Mass journal posting

In this exercise, you will post transactions from several different journals to the general ledger at one time.

Before you begin:

- Ensure you have completed all prior exercises because they provide data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Post multiple journals

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *mass journal* in the **Filter** field.
3. Click the **Mass Journal Posting** list item.
4. Click the **OK** button. The **Mass Journal Posting** form opens with various general distribution journals displayed in the grid.
5. Verify the **Post through** field displays the end of the current month so you will be able to post your transactions.
6. Click to select the **Post** check box for the **AP Dist** journal in the grid.
7. Click to select the **Override warning** check box for the **AP Dist** journal.
8. Repeat steps **6-7** for each of the following journals:
 - AR Dist
 - CO Dist
 - General
 - IC Dist
 - PO Dist
 - SF Dist

If you have multiple learners using your training environment someone else may have already posted one or more of these journals. Review the values and continue posting any journals that are available.

9. Click the **Process** button. A dialog box opens with the message, “[Journal Transaction Report] will be printed.”
10. Click the **OK** button. The **Journal Transaction Report** opens in a new tab.
11. Review the report. **Note:** the report may contain transactions in addition to the ones performed in the exercises in this course. Scroll through the report pages to review your transactions.
12. Click the **X** on the report tab to close. A dialog box opens with the message “Report Submitted”.
13. Click the **OK** button. The **Mass Journal Posting** form displays.
14. Click the **Commit** button.
15. Click the **Process** button. A dialog box opens with the message, “[Post] will be performed.”

16. Click the **OK** button. **Note:** When the posting is complete the **Message** fields will display how many journal transactions were posted for each journal.
17. Click the **X** on the **Mass Journal Posting** form.

Part 2: View journals in G/L Posted Transactions.

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *g/l posted* in the **Filter** field.
3. Click the **web.GLPostedTransactions** list item.
4. Click the **OK** button. The **G/L Posted Transactions** form opens.
5. Click the **Filter In Place** icon.
6. Click the **calendar** icon in the **Date** field. A calendar displays with the current month and year visible.
7. Click the **Today** button. **Note:** This is the date the journals were posted. If you posted on a different date or multiple dates, follow these steps to view all transactions:
 - a. Click [a specific date item] in the calendar to filter for transactions posted on that date.
 - b. Type *>[exercises start date in format mm/dd/yyyy]* in the **Date** field to filter for all transactions since the date you started exercises. For instance, to filter for all transactions after June 1, 2021, type *>6/1/2021*.
8. Click the **Filter In Place** icon. Each of your posted general ledger transactions displays in the grid.
9. Click the **Sequence Detail** button for the first item in the grid. The **Posted Transaction – A/P (Linked)** form opens.
10. Review the details of the A/P transaction.
11. Click the **X** on the **Posted Transaction – A/P (Linked)** form.
12. Repeat steps 9-11 for any of the other items in the grid to review the transaction details.
13. Click the **X** on the **G/L Posted Transactions** form.

Troubleshooting mass journal posting

If you receive an error message about Multi-FSB:

- **General Parameters** form – deselect the **Multiple Financial Sets of Books** check box

If you receive a message that a journal is in use by another user, the journal will be locked.

- **Unlock Locked Journals** form – deselect the **Locked** check box.

Cash To Reconciliation process

The Cash To Reconciliation process captures all the activities involved with receiving bank statements, applying finance charges, recomputing balances, and reconciling with G/L.

Process diagram

The overall business process is shown in the diagram below.

Cash To Reconciliation business process diagram

Note: this process is not covered in this course. Please refer to the course **SyteLine: Managing the General Ledger** for more information.

Fixed Asset To Disposal process

The Fixed Asset To Disposal business process includes the tasks required for organizations to manage their fixed assets. The process involves activities ranging from registering the fixed asset, depreciating the asset based on schedule, transferring the asset and finally disposing of the asset.

Process diagram

The overall business process is shown in the diagram below.

Fixed Asset To Disposal business process diagram

Note: This process is not covered in this course. Please refer to the course **CloudSuite Industrial: Managing Fixed Assets** for more information.

Financial Reporting and Closing process

The Financial Reporting and Closing process helps organizations close their accounting periods and report their financial statements. The Financial Reporting and Closing process flows involve both month-end and year-end closing activities, along with generating financial statements for the period.

Process diagram

The overall business process is shown in the diagram below.

Financial Reporting and Closing business process diagram

Note: This process is not covered in this course. Please refer to the course **SyteLine: Managing the General Ledger** for more information.

Check your understanding

?

What is one of the components of the Financial Plan To Report business process?

- a) Receipt To Payment
- b) Payment To Receipt
- c) Shipping To Invoice
- d) Procure To Pay

?

What step is part of creating and processing customer payments?

- a) Generate AP Transactions
- b) Order Invoicing and credit memos
- c) G/L Posted Transactions
- d) Order Shipping

?

What is the first step in the flow of processing vendor payments?

- a) Voucher Posting
- b) Generate A/P Transactions
- c) Preliminary Check Register
- d) Final Check Register

?

Which journal is used to post manual journal entries that are not the result of a system transactional flow?

- a) General journal
- b) AP journal
- c) Inventory journal
- d) Order entry journal

?

What is one place to review the system impacts of the Financial Plan to Report business process?

- a) Order Shipping
- b) G/L Posted Transactions

- c) Work Centers
- d) Job Orders

Refer to [Appendix B](#) for answers to the check your understanding questions.

Course summary

Estimated time

0.50 hours

Learning objectives

Now that you have completed this course, you should be able to:

- Identify the main processes of Infor CloudSuite™ Industrial (SyteLine).
- Explain how to perform key sales management tasks in the Lead To Order business process.
- Explain how to complete the main sales order functions of the Quote To Cash business process.
- Explain the primary functions of the Design To Release business process.
- Explain the key vendor management tasks in the Procure To Pay business process.
- Explain how to use Advanced Planning and Scheduling (APS) in the Plan To Inventory business process.
- Identify the steps in the Demand To Build business process.
- Describe the primary financial management functions in the Financial Plan To Report business process.

Topics

- Course review

Course review

?

What is one end-to-end business process you cover in this class?

- a) Plan To Inventory
- b) Cash To Service
- c) Build To Demand
- d) Hire To Retire

?

What can you set up if you have a new product and want to track expected leads and return on investment?

- a) Estimate
- b) Campaign
- c) Opportunity
- d) Prospect

?

A prospect can be entered directly into the Prospects form. Which other two forms also provide a link to the prospect?

- a) Tasks
- b) Customers
- c) Estimates
- d) Opportunities

?

What is required when you convert an estimate to a sales order?

- a) Customer
- b) Unit Price
- c) Prospect
- d) Credit Limit

?

What is one of the elements of the BOM that must be set up before the BOM can be created?

- a) Customer

- b) Opportunity
- c) Resource
- d) Engineering Change Notice

What is required when you convert a purchase requisition to a purchase order?

- a) Customer
- b) Vendor
- c) Item
- d) Vendor Contract

After APS can you use to create your workbench?

- a) Background Task History
- b) Material Planner Workbench
- c) APS Planning
- d) Material Planner Workbench Generation

What form do you use to record job labor?

- a) Unposted Job Transactions
- b) Job Material Transactions
- c) Post Job Transactions
- d) Material Planner Workbench

Which report can you run to check on a customer's outstanding balances?

- a) AR Journal Report
- b) Accounts Receivable Aging Report
- c) Material Transactions Report
- d) Accounts Payable Aging Report

Refer to [Appendix B](#) for answers to the check your understanding questions.

Appendices

The following are included in this section:

- Appendix A: User accounts
- Appendix B: Check your understanding (CYU) answers
- Appendix C: CloudSuite Industrial Implementation Accelerator definition

Appendix A: User accounts

Your instructor will assign you a student user ID from the table listed below to use for class exercises.

Appendix B: Check your understanding answers

This section provides the answers to the questions found at the end of each lesson.

Lesson 1: Process overview

Which of the following solutions includes industry specific predefined menus, process, and structures?

- a) Infor Ming.le™
- b) End to End Business Process
- c) Dashboards
- d) Home pages

Which two of the following are examples of a CloudSuite Industrial end-to-end business process?

- a) Pay To Procure
- b) Lead To Order
- c) Plan To Inventory
- d) Build To Demand

In this course your company will build a Smartwatch. Which item below is the manufactured item?

- a) Face of Smartwatch
- b) Battery
- c) Watchstrap
- d) Smartwatch

Lesson 2: Lead To Order

What is one of the components of the Lead To Order business process?

- a) Prospect To Customer
- b) Opportunity To Lead

- c) Customer To Prospect
- d) Sales Order To Opportunity

?

What must be assigned on the Lead form in order to convert it to an opportunity?

- a) Prospect or customer
- b) Sales contact
- c) Task
- d) Campaign

Lesson 3: Quote To Cash

?

What is one component of Quote To Cash business process?

- a) Shipping To Invoice
- b) Shipping To Sales Order
- c) Credit To Return
- d) Sales Order To Quote

?

What do you create if you want to send more information to a customer while working on a sales opportunity?

- a) Estimate
- b) Sales order
- c) Lead
- d) Campaign

?

What field should be checked on the Items form if using MRP or APS?

- a) Purchased
- b) Stocked
- c) Product Code
- d) Shrink Factor

What field on the Customers form is not required, but the customer order line will default as Planned if the field is not completed?

- a) Bank Code
- b) Type
- c) Credit Limit
- d) Product Code

Which report is used to send to a customer after an estimate is created?

- a) Order Acknowledgement
- b) Estimate Verification
- c) Estimate Response Form Report
- d) Order Verification

What is the trigger of the Sales Order To Shipping business process?

- a) Creation of estimate
- b) Shipping the item
- c) Creating an opportunity
- d) Receipt of customer order

Lesson 4: Design To Release

What is one component of the Design To Release business process?

- a) Design To BOM/Routing
- b) Plan To Schedule Production
- c) Schedule To Plan Production
- d) BOM/Routing To Design

The steps for creating a BOM appear below in the wrong order. Reorder the steps from 1-7 to reflect the correct sequence.

Create resource groups	4
------------------------	---

Create operations for end items	6
Create work center records	5
Create material records for operations	7
Create item records	1
Create resource records	3
Create shift records	2

?

Match each of the following items with the form through which it is defined. The possible forms are: **Resources**, **Resource Groups**, **Work Centers**, and **BOM Cost Roll Up**.

!

Item to define	Form
This form is linked on the Work Centers form.	Resource Groups
This form is used to update the current cost for manufactured materials.	BOM Cost Roll Up
When you set up this form you select your Resource Type.	Resources
This form is used to define your Setup Rate and Run Rate.	Work Centers

Lesson 5: Procure To Pay

?

What is one of the components of the Procure To Pay process?

- a) PO To Requisition
- b) Receipt To Purchase Order
- c) Payment To Receipt
- d) Purchase Order To Receipt

?

Which of the following can be used to generate vendors if an item has never been ordered before?

- a) Request for Quote
- b) Users
- c) Purchase Requisition
- d) Purchase Requisition Lines

?

What form must have dollar limits set up before you can approve a purchase requisition?

- a) Purchase Requisitions
- b) Users
- c) Purchase Requisition Lines
- d) Vendors

?

What form would you use if one of your employees wants to purchase something that is outside of the manufacturing process and would require approval from the Purchasing department?

- a) Purchase Requisitions
- b) Users
- c) Purchase Orders
- d) Vendors

?

What form do you set up in the Material Planner Workbench to link a vendor to an item?

- a) Purchase Requisition Lines
- b) Vendors
- c) Vendor Contracts
- d) Users

?

What option on the Purchase Order report do you select to change the status on the purchase order from planned to ordered?

- a) Change Order Status
- b) Post Status Changes
- c) Print Item Overview

d) Print PO Notes

?

What journal does a PO receipt go to?

a) PO Dist

b) AP Dist

c) IC Dist

d) SF Dist

?

What field do you set up on the current materials form to increase the material issued by the specified percent?

a) Items

b) Scrap Factor

c) Shrink Factor

d) Work Centers

Lesson 6: Plan To Inventory

?

What is one of the components of the Plan To Inventory process?

a) Correct To Count

b) Count To Correct

c) Replenish To Plan

d) Sales Order To Shipping

?

In SyteLine you will have to choose which planning engine to use for your planning output. What method are we using in this class?

a) MPR

b) APS

c) MRP

d) ASP

?

What is one benefit using the Material Planner Workbench?

a) Jobs are automatically created for you.

- b) Workbench is by created for each planner code.
- c) Workbench is automatically created after you run planning.
- d) Workbench consolidates all your plans by your planner code.

Once APS is generated, what is the next step prior to viewing the Material Planner Workbench?

- a) Material Planner Workbench Generation
- b) APS mode
- c) APS Planning Detail
- d) APS Planning

Lesson 7: Demand To Build

What is one of the components of the Demand To Build process?

- a) Schedule To Procurement
- b) Demand To Plan
- c) Design To Cash
- d) Build To Schedule

What are the two Plan To Schedule processes?

- a) Plan To Schedule Procurement
- b) Demand To Plan
- c) Plan To Schedule Production
- d) Build To Schedule

The steps for completing jobs appear below in the wrong order. Reorder the steps from 1-6 to reflect the correct sequence.

Release jobs	1
Issue materials	4
Record labor	5

Print dispatch list report	3
Print job packet	2
Post job transactions	6

What step must be completed before invoicing happens?

- a) APS planning
- b) Order shipping**
- c) Job creation
- d) BOM creation

What is one of the forms that could be used to review system impacts of Demand To Build business process?

- a) Job Materials**
- b) Work Centers
- c) Customer Orders
- d) Planning Parameters

Lesson 8: Financial Plan To Report

What is one of the components of the Financial Plan To Report business process?

- a) Receipt To Payment**
- b) Payment To Receipt
- c) Shipping To Invoice
- d) Procure To Pay

What step is part of creating and processing customer payments?

- a) Generate AP Transactions
- b) Order Invoicing and credit memos**
- c) G/L Posted Transactions
- d) Order Shipping

What is the first step in the flow of processing vendor payments?

- a) Voucher Posting
- b) **Generate A/P Transactions**
- c) Preliminary Check Register
- d) Final Check Register

Which journal is used to post manual journal entries that are not the result of a system transactional flow?

- a) **General journal**
- b) AP journal
- c) Inventory journal
- d) Order entry journal

What is one place to review the system impacts of the Financial Plan To Report business process?

- a) Order Shipping
- b) **G/L Posted Transactions**
- c) Work Centers
- d) Job Orders

Course review

What is one end-to-end business process you cover in this class?

- a) **Plan To Inventory**
- b) Cash To Service
- c) Build To Demand
- d) Hire To Retire

What can you set up if you have a new product and want to track expected leads and return on investment?

- a) Estimate

b) Campaign

c) Opportunity

d) Prospect

?

A prospect can be entered directly into the Prospects form. Which other two forms also provide a link to the prospect?

a) Tasks

b) Customers

c) Estimates

d) Opportunities

?

What is required when you convert an estimate to a sales order?

a) Customer

b) Unit Price

c) Prospect

d) Credit Limit

?

What is one of the elements of the BOM that must be set up before the BOM can be created?

a) Customer

b) Opportunity

c) Resource

d) Engineering Change Notice

?

What is required when you convert a purchase requisition to a purchase order?

a) Customer

b) Vendor

c) Item

d) Vendor Contract

?

After APS can you use to create your workbench?

a) Background Task History

- b) Material Planner Workbench
- c) APS Planning
- d) Material Planner Workbench Generation

What form do you use to record job labor?

- a) Unposted Job Transactions
- b) Job Material Transactions
- c) Post Job Transactions
- d) Material Planner Workbench

Which report can you run to check on a customer's outstanding balances?

- a) AR Journal Report
- b) Accounts Receivable Aging Report
- c) Material Transactions Report
- d) Accounts Payable Aging Report
