About this workbook

Welcome to this Infor Education course! We hope you will find this learning experience enjoyable and instructive. This Training Workbook is designed to support the following forms of learning:

- Classroom instructor-led training
- Virtual instructor-led training
- Self-directed learning

This Training Workbook is not intended for use as a product user guide.

Activity data

You will be asked to complete some practice exercises during this course. Step-by-step instructions are provided in this guide to assist you with completing the exercises. Where necessary, data columns are included for your reference.

Your instructor will provide more information on systems used in class, including server addresses, login IDs, and passwords.

Self-directed learning

If you are taking this course as self-directed learning, there may be instructor-recorded presentations and/or simulations available to assist you.

If instructor-recorded presentations are available, a hyperlink to the recording will be included on the first page of each corresponding Lesson.

If simulations are available, the demos and exercises throughout this Training Workbook will include hyperlinks that allow you to view and/or practice the execution of the demo or exercise in a simulated training environment.

Learning Libraries

Learning Libraries in Infor Campus include learning materials that are available to you online, anytime, anywhere. These materials can supplement instructor-led training, providing you with additional learning resources to support your day-to-day business tasks and activities.

Please note that if you accessed this Training Workbook directly via a Learning Library, you will not have access to the Infor Education Training Environment that is provided with all instructor-led and most self-directed learning course versions, as referenced above. Therefore, you will not be able to practice the exercises in the specific Training Environment for which the exercises in this Training Workbook were written.

Course overview

Estimated time

.25 hours

Learning objectives

Upon completion of this course, you will be able to:

- Describe the elements of the Quote To Cash business process
- Describe the process to create customer records and the information that is maintained for customers.
- Describe the process for creating regular and blanket customer orders.
- Review Customer Service forms

Topics

- Course description and agenda

Course description and agenda

This course covers fundamental customer service and order entry concepts in the Quote To Cash business process for the customer service role. This includes setting up customers and customer contracts, creating regular and blanket customer orders, and more.

Course duration

4 hours

Prerequisite courses

- SyteLine: Navigating the User Interface
- SyteLine: Foundation

Prerequisite knowledge

To optimize your learning experience, Infor recommends that you have the following knowledge prior to attending this course:

- Knowledge of how data is structured and organized
- Ability to navigate the user interface

Audience

- Customer User
- Pre-Sales Consultant
- Business Consultant
- Technical Consultant
- Support
- System Administrator

System requirements

- Infor SyteLine Training Environment

Reference materials

Infor SyteLine reference materials are available from the following locations:

- Infor SyteLine Help menu
- Infor Concierge®

Course agenda

The agenda below details the contents of this course, including lesson-level learning objectives and supporting objectives.

Lesson	Lesson title	Learning objectives	Estimated Time (Hours)
Course overview		Review course expectations.	.25
1	Using Quote to Cash	Describe the elements of the Quote to Cash business process within the Industry Process Catalog	.75
2	Managing Customers	- Describe how to setup customers. - Describe the information contained in each of the tabs of the Customers form.	1
3	Using Sales Order to Shipping	- Describe the setup of order entry parameters. - Describe the process for creating regular customer orders. - Describe the process for creating blanket customer orders.	1
4	Using Additional customer information	- List the steps to create a customer document profile. - Explain how communications with a customer are recorded. - Describe how to use Customer 360 and Customer Service Home forms.	.75
Course summary		Debrief course.	.25

Appendices

This section contains information that is not part of the instructional content of this course, but provides additional related reference information.

Appendix	Appendix title	Content description
Appendix A	User accounts	This appendix provides a reference for student login credentials.
Appendix B	Check your understanding answers	This appendix lists the various order entry reports with a description of each report's output. The reports that are introduced in this course are also included. This appendix also lists the various order entry utilities with a description of each utility's purpose.
Appendix C	Delivery orders	This appendix provides instructions on the use of delivery orders to include creating a delivery order, adding delivery order lines, setting delivery order line sequences, and assigning delivery orders to shipments.

Lesson 1: Using Quote To Cash

Estimated time

.5 hours

Learning objectives

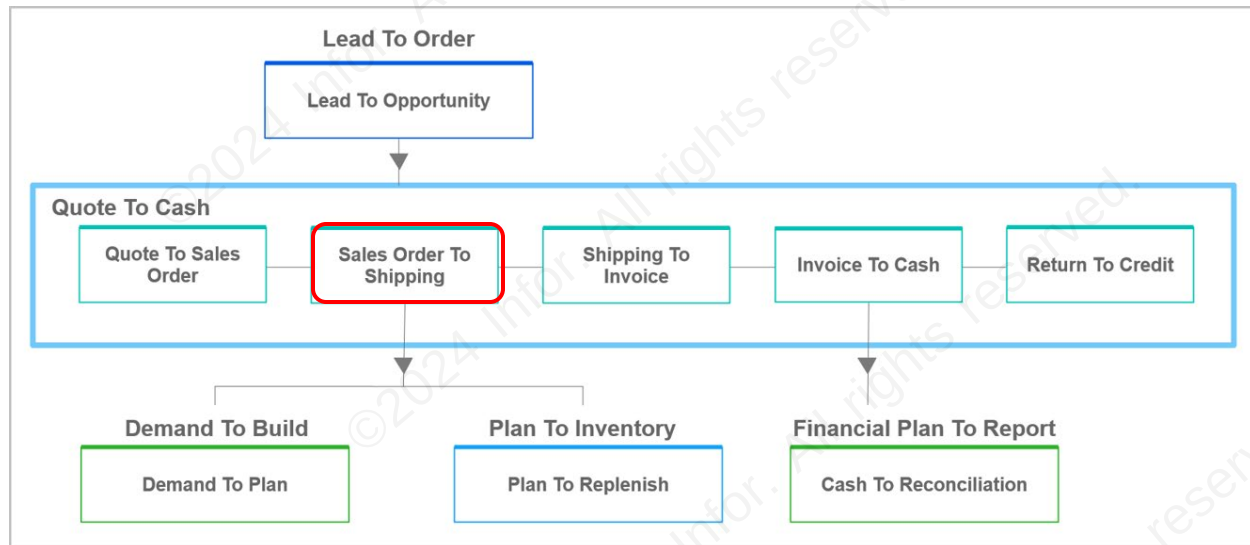

In this lesson, you will:

- Describe the elements of the Quote to Cash business process within the Industry Process Catalog

Topics

- Review Quote to Sales Order business process

Quote To Cash business process overview

The Quote to Cash business process helps organizations manage all their sales activities. This business process encompasses all the activities starting from submitting quotes to customer, winning the order, shipping the items and finally invoicing and collecting payments.

Following are the sub processes within Quote to Cash:

- Quote to Sales Order - Defines the activities involved in managing sales opportunities, tracking opportunity win/loss percentage, sending out estimates to customers and finally converting the approved estimate to sales order.
- Sales Order to Shipping- Defines the activities involved in receiving customer PO, creating sales order, sending order acknowledgement, picking the orders to be shipped, packaging and finally shipping the items to the customer
- Shipping to Invoice - Defines the activities involved in determining the customers that need to be invoiced, cross verifying with customer shipments, print the invoice and sending it to the customer for payment.
- Invoicing to Cash - Defines the activities involved in receiving customer payments, applying them to open invoices and recognizing revenue.
- Return to Credit (RMA) -Defines the activities involved in managing customer returns and by providing credits or sending them replacement products.

This course covers the Sales Order to Shipping process.

Lesson 2: Managing Customers

Estimated time

.75 hours

Learning objectives

In this lesson, you will:

- Describe how to setup customers
Describe the information contained in each of the tabs of the Customers form.

Topics

- Setup customers
- Setup multiple shipping locations

Why create customer records?

Before a customer order can be created a customer must be created. A customer record must be set up for each customer. The customers form stores all the relevant information for basic customer data, tracking what customers buy from the company, and what customers owe. It also shows how much a customer has purchased from the company during the current year and the previous year.

The green check mark symbol that appears in the top-right corner of the form indicates that this customer account is not on credit hold. If you were to place this account on credit hold, a red exclamation point symbol would appear in this position on the form.

Customers

Detail

The following table describes the key fields and drop-down lists on the menu option on the Customers form:

Name	Description
Customer	The Customer field is a unique alphanumeric customer identifier. If you do not specify a number here, the system assigns the next unique customer number available when you save the record.
Customer Name	Enter the customer's company name. This name is displayed on reports and payments.
Address (1-4)	The Address fields are the various billing addresses associated with this customer.
City	The City field identifies the city where the customer is located.
Prov/St	The Prov/St list identifies the Province/State where the customer is located.
Postal/ZIP	The Postal/Zip field identifies the postal code or zip code where the customer is located.
County	The County field identifies the county where the customer is located.
Country	The Country identifies the country where the customer is located.
Corporate Cust	The Corporate Cust field identifies the number of the parent company, if the customer is a subordinate company. The customer to be the designated corporate customer is selected on the Corporate Customer.
Corporate Customer Description	The Corporate Customer Description is the name corresponding to the number entered in the Corporate Cust field.
Language	The selection from the Language drop-down list identifies the language code of the customer.
Currency	The Currency field identifies the currency code used by the customer.

Name	Description
Bank Code	The selection from the Bank code drop-down list identifies the customer's bank. This is the default bank account in which the customer's checks are deposited.
Customer Bank	The selection from the Customer Bank drop-down list identifies where customer payments are deposited.
Type	The selection in the Type drop-down list specifies the customer type from types set up on the Customer Types form. The following list provides some ways in which to use customer types and the Type drop-down list: • The customer type can be used to specify discounts or to filter on certain customers when printing sales analysis reports. • You may want to set up different types to determine if a customer is active or inactive. The Type drop-down list can be used to determine the territory the customer is in and to print sales analysis reports by territory.

Setting up multiple shipping locations

You can set up a customer record so that a customer can have one billing address and multiple shipping locations. Up to 9999 different addresses can be entered for this customer to define secondary addresses for shipping purposes.

The Customer Ship-Tos form is used to add and define customers and addresses to which you want to ship. You can also select a customer ship-to record and assign sales contacts to it.

The following table describes the, fields, on the Codes tab of the Customer Ship-Tos form:

Name	Description
Salesperson	The selection from the Salesperson drop-down list is a code that represents the salesperson who is responsible for this customer. If a salesperson is not identified, this drop-down list is left blank.
Language	The selection from the Language drop-down list identifies a language

Name	Description
	code if this ship-to customer uses a foreign language. The system uses this code to determine the language in which to print customer invoices and reports.
Currency	The Currency field displays the currency code and description for the customer.
Export Type	The Export Type field identifies the export type associated with the customer. Options include: • Direct - The company sells the product directly to a foreign customer. • Indirect - Tax-free imported materials can be shipped to this customer to be included in a final assembly that is being exported back to the original country. • Non-Export - The company sells to a local customer and in return issues an Export Certificate stating the company uses this product as a raw material or assembly and will sell the finished good to a foreign customer. This field is enabled when the Track Tax Free Imported Materials check box is selected on the Inventory Parameters form.
Tax Code 1, 2 (and Description)	The selection from the Tax Code 1, 2 drop-down lists display the user-defined tax codes entered on the Tax Systems form.
Fed ID	The Fed ID field identifies the federal identification number for the ship-to customer. The values for this field are defined on the Tax Systems form.
Branch ID	The Branch ID field identifies the branch ID (if any). This field is activated only when the Activate EU Reporting check box is selected on the General Parameters form.

Exercise 2.1: Create a basic customer record

In this exercise, you will create a new customer.

Before you begin:

- Ensure you are logged into SytelLine

Part 1: Create a new customer record

1. Click the **Open** icon on the toolbar.
2. Type *customers* in the **Filter** field.
3. Click the **web.Customers** list item.
1. Click the **OK** button. The **Customers** form opens.
2. Click the **New** icon.
3. Type [*your initials*]? in the **Customers** field.
4. Type *Grandview Cycles* in the **Customer Name** field.
5. Type *1458 West Fifth Avenue* in the **Address (1)** field.
6. Type *Grandview* in the **City** field.
7. Click the **Prov/St** drop-down arrow.
8. Click the **OH** list item.
9. Type *43212* in the **Postal/ZIP** field.
10. Type *Franklin* in the **County** field.
11. Click the **Bank Code** drop-down arrow.
12. Click the **BK1** list item.
13. Click the **Type** drop-down arrow.
14. Click the **RETAIL** list item.
15. Click the **Save** icon.
16. Write down your customer number _____.

Note: After saving the record, the bill-to address that you typed is also used as the initial default ship-to address.

Part 2: Add ship-to information for this customer

1. Click the **Ship To** menu option.
 2. Click the **Ship Tos** button. The **Customer Ship-Tos (Linked)** form opens.
 3. Click the **New** icon.
 4. Type *Grandview Cycles* in the **Name** field.
 5. Enter the shipping address information for the new ship-to location:
 - a. Type *23 North Market Street* in the **Address (1)** field.
- 18 Lesson 2: Managing Customers

- b. Type *Boardman Center* in the **Address (2)** field.
 - c. Type *Boardman* in the **City** field.
 - d. Click the **Prov/St Code** drop-down arrow.
 - e. Click the **OH** list item.
 - f. Type *44415* in the **Postal/ZIP** field.
 - g. Type *Peter Cyberman* in the **Contact** field.
 - h. Type *216-785-9321* in the **Phone** field.
 - i. Type *216-788-2321* in the **Fax** field.
6. Click the **Save** icon.
 7. Click the **Codes** menu option.
 8. Click to clear the **Ship Partial** check box.
 9. Verify the **Ship Early** check box is selected.
 10. Click the **Salesperson** drop-down arrow.
 11. Click the **CPR** list item.
 12. Click the **Save** icon.
 13. Click the **Window** drop-down arrow in the **Menu** bar.
 14. Click the **Close All** menu item.

Adding information on the Customers form

In addition to the header on the Customers form, the menu options is where you can add a variety of information about the customer. The other menus on the Customers form are:

- Credit
- Contacts
- Codes
- Corporate Customer
- Overview

Descriptions of the type of information contained in these menus are provided below. Not every field and menu will be described in this lesson. The fields and menus that are commonly used will be addressed. For more information on any of the fields, place your cursor over the field, right-click and select Help from the drop-down list.

Select a menu on the Customers form to view or update information as needed. Remember to save the record after making any changes.

Credit

The Credit menu on the Customers form stores all relative credit information pertaining to the customer to include sales and payment information., you can define the amount of credit extended to the customer. When you add a new customer order, the system displays a warning message if that order total exceeds the credit limit. However, you can disregard the warning message to process an order that exceeds the credit limit. You can also put the customer on credit hold, which blocks any shipping transactions for this customer.

The following table describes some of the fields:

Name	Description
Credit Limit	The Credit Limit specifies the amount of credit extended to the customer. When adding a new customer order, if an order is placed that will exceed the amount of available credit, the system displays an informational message warning the user of the exceeded credit limit. The user can dismiss the warning message.
Order Credit Limit	The Order Credit Limit identifies the amount of credit extended to the customer per order. The order credit limit must be less than, or equal to, the total credit available for the selected customer. If an amount that is greater than the total available credit is entered for the customer, an error message displays, and the record is not saved.
Credit Hold	When Credit Hold is selected, the system places the current customer

Name	Description
	account on credit hold. When a customer account is placed on credit hold, no shipments can be made to that account. Clearing the Credit Hold check box removes the credit hold for a customer account. When a customer account is on credit hold, a large red exclamation point displays on each of the customer's records throughout the system. A large green check mark displays when a customer account is not on credit hold. Refer to image below for examples of the credit hold status icons.
Reason	Identifies the reason the customer account is on credit hold.

Customer: 6 Larry's Bicycles
 Address [1]: 555 Garfield Lane
 Language: [v]

A red exclamation mark indicates that the customer is on credit hold status.

Customer: C000001 Grandview Cycles
 Address [1]: 1458 West Fifth Avenue
 Language: [v]

A green check mark indicates that the customer is **not** on credit hold status.

Icon next to customer name indicates credit hold status

Contacts

The Contact's menu is used to identify the names and contact information for order and billing communications with this customer.

The Order Contact is used on order verification documents. The Billing Contact s used on accounts receivable documents such as customer statements.

You can also enter a URL address for a customer website.

Corporate Customer

The Corporate Customer allows you to create relationships between one customer, referred to as the corporate customer, and one or more other customers, referred to as subordinate customers.

If you select another customer number from the drop-down list, you are specifying this current customer as the subordinate customer (that is, subordinate to the customer you specify in the Corporate Cust field).

Only the customer that you specify as the corporate customer appears on the Bill To tab. This allows you to apply a single payment across multiple subordinate customer invoices. By selecting the Corporate Credit check box, you can use the corporate customer's credit values for credit limit processing or clear this check box to use the subordinate customer's credit values.

The following table describes the Corporate Customer:

Name	Description
Corporate Address	The Corporate Address check box, when selected, prints the corporate address on invoices, debit memos, or credit memos.
Corporate Credit	The Corporate Credit check box, when selected, displays the corporate credit for credit limit processing. If the check box is cleared, the system uses the subordinate customer credit for credit limit processing.
Corporate Cust	The selection from the Corporate Cust drop-down list displays the corporate customer's customer number for the subordinate customer displayed in the Customer field in the header. When you select a customer number from this drop-down list, the system displays the name and address of that customer in the box below. If a selection is not made from the Corporate Cust drop-down list, the current customer record has no corporate customer. If the current customer is neither a corporate customer nor a subordinate customer, this drop-down list is blank.

Overview

Enter the logo for the customer.

2.2: Create a full customer record

Before you begin:

- Ensure you are logged into Syteline

In this exercise, you will create a full customer record utilizing the additional customer information.

We are pleased to announce that Jay Richards is finalizing the last-minute details on a rather impressive sales deal. Within the next week, Jay will be closing an order with Mountain Trail Bikes, located in Montana. In preparation, we must set up a new customer record for Mountain Trails.

Their address information is as follows:

Mountain Trail Bikes

18 North Street

Whitefish, MT 76421

Phone: 406-432-9999

UPS® is the primary method of shipment. Early shipments will be permitted, but not partial shipments. In case of shipping problems, contact Stuart Alden at (406) 555-8960.

The statement cycle is monthly, their credit limit is \$75,000 with an order credit limit of \$5,000, and the bank code is BK1. We will offer Mountain Trails our billing terms of 2%. Mike Smith is Jay's main ordering contact. He can be reached at (406) 555-1254. The fax number is (406) 556-4449.

Mountain Trails is a subsidiary of Gilmore Two Wheelers. Mountains Trails will be utilized and invoices will be mailed to the parent company.

The bill-to is Mountain Trail Bikes:

- Corporate Customer is Gilmore Two Wheelers
- Corporate Address is Yes
- Corporate Credit is No

Exercise steps

Part 1: Create a new customer record

1. Click the **Open** icon on the toolbar.
2. Type *customers* in the **Filter** field.
3. Click the **web.Customers** list item.
4. Click the **OK** button. The **Customers** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Customer** field.
7. Type *Mountain Trail Bikes* in the **Customer Name** field.
8. Type *18 North Street* in the **Address (1)** field.
9. Type *Whitefish* in the **City** field.
10. Click the **Prov/St Code** drop-down arrow.
11. Click the **MT** list item.

12. Type 76421 in the **Postal/ZIP** field.
15. Click the **Bank Code** drop-down arrow.
16. Click the **BK1** list item.
17. Click the **Save** icon.
18. Write down your customer number _____.

Part 2: Create ship to information

1. Click the **Ship To** menu option.
2. Click the **Ship Tos** button. The **Customer Ship-To (Linked)** form opens.
3. Type *Stuart Alden* in the **Contact** field.
4. Type 406-555-8960 in the **Phone** field.
5. Click the **Codes** menu option.
6. Click the **Ship Via** drop-down arrow.
7. Click the **UPS** list item.
8. Click to clear the **Ship Partial** check box.
9. Verify the **Ship Early** check box is selected.
10. Click the **Salesperson** drop-down arrow.
11. Click the **JAR** list item.
12. Click the **Save** icon.
13. Click the **X** on the **Customer Ship-Tos linked** form.

Part 3: Enter credit information

1. Click the **Credit** menu option.
2. Type 75000 in the **Credit Limit** field.
3. Type 5000 in the **Order Credit Limit** field.
4. Click the **Terms** drop-down arrow.
5. Click the **2%** list item.
6. Click the **Save** icon.

Part 4: Enter contact information

1. Click the **Contacts** menu.
2. Click the **Contacts** menu option.
3. Type *Mike Smith* in the **Order Contact** field.
4. Type 406-555-1254 in the **Phone** field.
5. Type 406-556-4449 in the **Fax** field.
6. Click the **Save** icon.

Part 5: Enter corporate customer information

1. Click the **Customers** menu.
2. Click the **Corporate Cust** menu option.
3. Click the **Corporate Cust** drop-down arrow.
4. Click the **4** list item.
5. Click to select the **Corporate Address** check box.
6. Click the **Save** icon.
7. Click the **X** on the **Customers** form.

Check your understanding

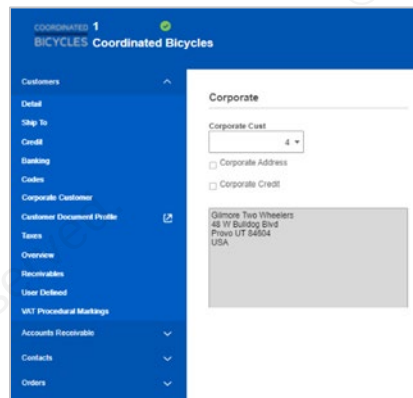

What does the icon above the customer name in the image above signify?

- a) Customer on credit hold
- b) Important Customer
- c) Record needs saved
- d) Customer record will be deleted upon save

In this example below Gilmore Two Wheelers is the corporate customer of Coordinated Bicycles. When making credit decisions for this customer which company's credit limit would it use?

- a) Coordinated Bicycles
- b) Gilmore Two Wheelers
- c) Coordinated Bicycles and Gilmore Two Wheelers combined credit limits
- d) System ignores credit limits

Lesson 3: Using Sales Order To Shipping

Estimated time

1 hour

Learning objectives

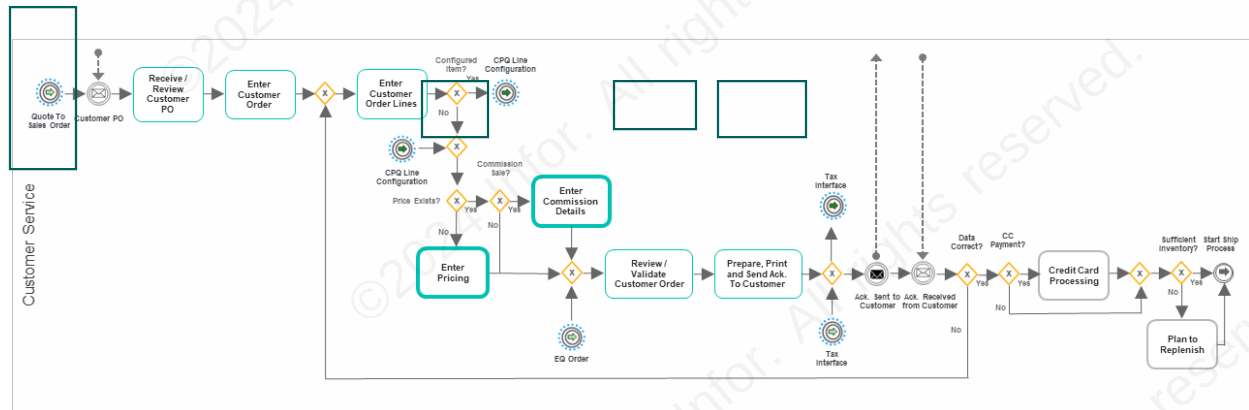

In this lesson, you will:

- Describe the setup of order entry parameters.
- Describe the process for creating regular customer orders.
- Describe the process for creating blanket customer orders.

Topics

- Create regular customer orders
- Create blanket customer orders

Sales Order to Shipping business process

The Shipping Clerk role will be covered in the Using Shipping course.

Customer orders overview

A company creates and uses a customer order (often abbreviated CO) when it sells goods or services. Each time a customer requests goods or services, a new customer order must be created or changes must be made to an existing one in the system.

The customer order consists of two major parts:

- The header
- The associated lines/releases

The header, defined on the **Customer Orders (Linked)** form, contains information about the customer to whom the items are being sold (such as billing and shipping addresses) and other general information about the order (such as tax information, the total weight, and total price).

The header also contains a field that indicates the type of order: regular or blanket. A blanket customer order differs from a regular customer order in that it allows for multiple release dates for each ordered item.

Defining order entry parameters

The Order Entry Parameters form is used to set default values in advance for some customer order fields.

Order Prefix

The Order Prefix field is the default prefix to be used for customer order numbers in the system.

A prefix can consist of numeric and non-numeric (letters and symbols) characters. However, the prefix should *end* with an alphabetic character to ensure that the system increments order numbers correctly.

When you reach the 10-character limit, the system displays a warning message. You need to start a new prefix sequence. Using the above CO example, when you reach CO99999999, you need to begin a new customer order prefix.

Std Due Period

The Std Due Period field specifies the number of days to add to the order date to identify a due date. This value becomes the system-level default for the standard due period.

The standard due period has three levels of defaults:

1. Std Due Period on the Order Entry Parameters form – system-level default
2. Std Due Period for a specific item on the Items form, Planning tab – overrides system-level default for that item
3. Std Due Period for a specific customer/item combination on the Customer Contracts form – overrides the item-level default for that item

When you create an estimate line item or customer order line item, SyteLine checks the forms above, in reverse order, until it finds a value for the standard due period. The system sets the due date for this item to the order date (taken from the order header record) plus the number of days for the standard due period.

Report Templates

Select the report template (Standard, Simple, Detail) that will be the default on the following reports.

- Order Verification Report
- Order/Invoicing Credit Memo
- Shipment Packing Slip Report
- Estimate Response Form Report

Creating a customer contract

The Customer Contracts form is used to track specific information concerning items purchased by customers, specify price breaks for quantity purchases, and specify a contract price.

The following table describes the fields on the Customer Contracts form:

Name	Description
Customer U/M	The selection from the Customer U/M drop-down list is used if the customer uses a different unit of measure for the selected item.
Std Due Period	The Std Due Period specifies the number of days to add to an estimate or order date to identify a due date. For an order of this item by this customer, the system sets the due date to the order date plus the value you enter in this field.
Cust Item (CI)	The Cust Item (CI) identifies the customer's item number that references the item selected in the Item field.
End User	The End User identifies the name of an "ultimate end user" (the customer's customer) for this customer-item combination. This field is optional and is mostly used for contract manufacturing.
Rank	The Rank is used to specify more than one end user for this customer-item cross-reference. The number that is entered in this field represents the rank of this end user. The ranking indicates the end user's priority.

Setting up customer contract prices

The Customer Contract Prices form allows you to track and control pricing information about specific items that customers purchase. When determining a price on a customer order, the system determines if a Customer/Contract is set up for that customer and item combination. The system then determines if the contract effective dates fall within the order date of the order itself. If the system does not find a valid contract price, it uses the quantity break points with their prices.

You can use the Customer Contract Prices form to:

- Create multiple records for customer/item combinations, with each record having a different effective date, contract price, and break points.
- Enter a specific contract price promised to the customer and specify the effective date for which the contract price should override other pricing formulas.

- Specify up to five price breaks for quantity purchases, defining them as either amount or percentage reductions of pre-defined, standard prices.

Example

Suppose there are two pricing records for a customer; one has a contract price and price breaks effective on April 1, and the other record has a contract price and price breaks effective on May 1. You enter an order on April 4. The system uses the pricing from the record that was effective April 1.

The following table describes the fields on the Customer Contract Prices form:

Name	Description
Contract Price	The Contract Price specifies the price guaranteed to the customer for one unit of this item. This price is only used when the order date (from the order header) falls within the effective dates.
Break Qty	The Break Qty identifies up to five quantity price breaks the customer is entitled to receive. The user enters a minimum quantity required for the associated price break. These price breaks can be manipulated by an amount or percentage to determine the final unit price.
Base Code	The selection from the Base Code drop-down list specifies the unit base price for the item. Options are: Unit Price 1 through Unit Price 6 Cost None The price is based on the actual item price. Cost is based on the unit cost.
Amount/Percent drop-down list	The selection from the Amount/Percent drop-down list can either be adjusted by a dollar amount or a percentage to determine the unit price.
Value	The Value field specifies either the amount or percentage that is used in calculating the unit price. The value amount can be either positive or negative.
Unit Price	The Unit Price button, when clicked, calculates the unit price of the item. The calculation is based on the values entered for each price break. The record must be saved before the Unit Price button becomes active.

Exercise 3.1: Create a customer contract

In this exercise, you will create a customer contract with a customer item cross-reference and contract pricing for the item.

This exercise uses the full customer record that you created in the previous lesson.

Jay Richards has informed us that he and Mountain Trail Bikes have completed negotiations for future sales of our FA-10000, Model-30 bicycle. Jay has guaranteed Mountain Trails that the FA-10000 will be sold to them for \$145 per unit for the next year. The end user for this new bike is Walkart.

We need to note this in the system with a customer item cross-reference. Furthermore, remember to reference the Mountain Trails' part number for the FA-10000 on any outgoing documents.

The Mountain Trail Bikes part number for the FA-10000 is 364748.

Contract Price = \$145

Customer Item = 364748

Begin Effect = Today's date

Ending Effect = One year from today's date

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *contracts* in the **Filter** field.
3. Click the **web.customercontracts** list item.
4. Click the **OK** button. The **Customer Contracts** form opens.
5. Click the **New** icon.
6. Type **[your initials]*** in the **Customer** field.
7. Click the **Customer** drop-down arrow.
8. Click the **[your customer number]** list item.
9. Type *FA-10000* in the **Item** field.
10. Type *Walkart* in the **End User** field.
11. Type *364748* in the **Cust Item (CI)** field.
12. Click the **Save** icon.
13. Click the **Prices** menu option. The **Customer Contract Prices (Linked)** form opens.
14. Click the **calendar** icon in the **Effective Date** field. A calendar displays with the current month and year visible.
15. Click the **[todays date]** option.
16. Type *145* in the **Contract Price** field.
17. Click the **Save** button.

18. Click the **X** on the **Customer Contract Prices (Linked)** form.

19. Click the **X** on the **Customer Contracts** form.

Creating regular customer orders

Whenever a customer requests goods or services, a new customer order must be created.

The Customer Orders form is where customer orders are added, or existing orders are updated and is referred to as the order header. It consists of the following menu options:

- Detail
- Address
- General
- Contacts
- Amounts
- Tax Info
- DIFOT
- User Defined

Each of these menus can be quickly accessed to find, add, delete, or update customer order information.

The following table describes how to complete the menus on the Customer Orders form:

Menu	Description
Detail	On the detail menu select the Cust PO, Warehouse, Terms, and Ship Via.
Address	On the Address menu, select the Ship To location if it is different than the default location.
General	Most of the information found in the General tab displays default information from the customer record. It can be overridden as necessary.
Contacts	The Contact's menu is used to specify a contact for order verification documents. The billing contact is used for accounts receivable documents. This information carries over from the customer record, but the user has the option to update the data.
Amounts	The Amounts menu includes all the current prices and accumulated charges. Prepaid amounts and miscellaneous charges, if known, should be typed in the appropriate fields before invoicing. If freight charges are known, they also can be entered. The Accumulated fields represent the total price of the order to-date. Multiple shipments can be made on an order and the totals of all past invoices and current amounts are displayed. A customer account may also be placed on credit hold on this tab by selecting the Credit Hold check box at the bottom of the tab. If you select the Credit Hold check box, you must also select the reason for placing the customer on credit hold from the Reason drop-down list.

Menu	Description
Tax Info	The Tax Info menu allows the user to add specific tax codes for this customer order. It holds tax codes for price, freight, and miscellaneous tax, and if applicable, codes pertaining to the European Community. Tax codes are set up in the tax system. The tax codes should be added to the customer record which will then become default values on the Customer Orders form.

Adding customer order lines

Each customer order (regular or blanket) can have associated multiple line/releases, which you define on the Customer Order Lines or Customer Order Blanket Lines forms. Usually, a line/release is needed for each item being sold. The line/release contains information such as the item number, the quantity being sold, and the unit price.

The following table describes the Detail menu of the Customer Order Lines form:

Name	Description
Line	The Line field identifies a specific line/release for the order. This line number determines the order in which the order lines appear. It must be unique for the order. You would normally accept the default number assigned by the system, but you may overwrite it if necessary.
Item	The selection from the Item drop-down list identifies the item number associated with the item being ordered. You can select an item from the drop-down list or enter a non-inventory item. After entering the item number, if the item is in inventory, the description from the Items form displays directly under the field.
Customer Item	The selection from the Customer Item drop-down list identifies the customer's item number for the item entered in the Item field. The customer item number is only displayed if the customer item cross-reference has been established for the selected item.
Qty Ordered	The Qty Ordered field specifies the quantity of the item being ordered. This number is entered by the user. The unit of measure appears next to the quantity ordered. It can be changed if necessary.

Name	Description
Unit Price	The Unit Price field displays the unit price for the item, which can be overwritten if necessary. If a customer contract price has been set up for the selected item, the contract price or the quantity price break price will display.
Sales Disc	The Sales Disc. field displays the percent discount that is given to this customer for the item. This can be set up on the Discounts form or set up manually on the order header or order line.
Promotion Code	The selection from the Promotion Code drop-down list identifies a promotion program that is associated to the individual line/release being ordered. Only promotion pricing-type promotion codes applicable to the selected order line are included in the list. When the code is selected, the value in the Unit Price field changes to the adjusted item price. If a sales discount had been specified, it is overridden and set to zero.
Net Price	The Net Price field displays the net price for the individual line/release.
Unit Cost	The Unit Cost field displays the unit cost of the item. This field is enabled only for non-inventory items.
Status	The selection from the Status list indicates the status of the customer order line item: The options are: • Ordered – default value at order entry time • Planned – the order line item is planned • Filled – the order line item is fully shipped Complete – the order line item is not open for any future processing, including invoicing and shipping.
Manufacturer	The selection from the Manufacturer drop-down list identifies the manufacturer to associate with this order or job, if applicable. This number is selected by the user.
Due Date	The Due Date field specifies the due date for the item. The system sets the due date for the item to the order date (taken from the header record) plus whatever value you enter in the Std Due Period field on the Order Entry Parameters form. The user can overwrite this date if necessary.
Request Date	The Request Date field displays the date by which the order line item was

Name	Description
	promised to be shipped to the customer. This is a reference-only field.
Manufacturer Item	The selection from the Manufacturer Item drop-down list identifies a manufacturer item number to associate with the selected record, if applicable. This number is selected by the user.

General

The table below describes the fields on the Customer Order Lines form, General menu:

Name	Description
Warehouse	The selection from the Warehouse drop-down list identifies the default warehouse from which the item ships. The user can accept the default warehouse or override the default by selecting a different warehouse.
Qty Ready	The quantity of the item that is ready to ship displays.
Reserved	The total amount that is reserved for the item displays.

Shipping

The Customer Order Lines Shipping menu option shows the date shipped, quantity shipped, and quantity returned. Both shipments and delivery orders should display the extended information relating to the carrier information. There is also a button that links to the tracking number or tracking URL.

Source

The Customer Order Lines Source tab shows the source of that item and a sub tab will activate when its matching type is selected in Source field. Below are the different types.

- **Inventory:** This read-only tab is enabled when the Source field is set to Inventory. It displays information about the sites, warehouses and locations that have on-hand inventory of the item you selected for this order line. It also indicates how much of that inventory is reserved, or reserved for customer orders, or non-nettable.
- **Purchase Order:** If the Source field is set to Purchase Order, this tab contains status information about the PO that supplies the item for this order line. The other fields on this tab are read-only and indicate whether the item was expedited, the due date, promise date, and last received date, as well as the amount received, rejected, and vouchered.

- **Job:** If the Source field is set to Job, this tab displays status information about the specified job operations that supplies the item you selected for this order line, including the work center, status of the operation, the amount received, completed, moved, or scrapped, unit of measure, start and end date, setup hours, and labor and machine costs.
- **Requisition:** If the Source field is set to Requisition, this tab displays status information about the specified PO requisition that supplies the item, including the vendor, buyer, PO number (if available), status, due date, promise date, the amount received, rejected, or vouchered, the last received date, and the status.
- **Transfer:** If the Source field is set to Transfer, this tab displays status information about the specified transfer order that supplies the item, including the From and To site and warehouse, the order status, the order date, scheduled ship and receive date, projected date, as well as dates of the last shipment, last receipt, and last pick list, and quantities shipped, received, or considered as a loss
- **Project:** If the Source field is set to Project, this tab displays status information about the specified project that supplies the item, including project status, start and end dates, projected completion date, and late alert.
- **SRO:** If the Source field is set to SRO, this tab displays information about the service order associated with the item, including the order status and billing status, create and close dates, start and end dates, and projected completion date. You can specify the associated incident number on this

Drop Ship

The Customer Order Lines Drop Ship tab allows the user to reference each line to any ship to address for drop shipment. Enter or select the customer number that identifies the customer to whom this line is to be shipped. Depending on the drop shipment destination of this specific line, this may not be the same customer as the one who placed the order.

Amounts

The table below describes the fields on the Customer Order Lines form, Amounts menu:

Name	Description
Price Code	The price code, selected by the user from the Price Code drop-down list, identifies the price code for this customer, if applicable. If a new price code is entered, you will be asked if you want to recalculate the unit price.
Tax Code	The Tax Code field specifies the rate of the tax code when calculating taxes for this item. The code is validated against the tax code file and defaults from the Items form.
Consolidated Invoice	The Consolidated Invoice check box, when selected, marks the line/release to be processed with consolidated invoicing.

Name	Description
	The default is the value of the Consolidated Invoice field set for the order in Customer Orders. The check box is enabled only if the Status field is Ordered or Planned.

Adding notes to order lines

The Object Notes form is used to view, add, delete, and modify notes for a selected customer record. You can also attach or detach reusable notes. Up to 9,999 lines of text regarding this customer can be added.

Clicking the Attach Detach Reusable button at the bottom of the form allows you to select from a list of already created system and class notes and attach them to this current record

Printing the Order Verification Report

The Order Verification Report is a hard copy printout of a customer order that can be sent to the customer via email or fax using the customer document profile on the Customers form. You can use the Order Verification Report to acknowledge a customer order.

You can also print this report for a range of customer orders, salespersons, and line/release numbers. In addition, you can sort it by customer order or salesperson.

For each order, this report includes the quantity ordered, the due date, the item, and (optionally) the unit price of each associated line/release. If promotion pricing has been applied to an order line, the promotion code is displayed. The customer's Bill To and Ship To addresses are also included.

You can include the following in the report:

- Regular and blanket customer orders
- Line/release statuses of Planned, Ordered, Filled and Complete
- Item numbers and customer item numbers
- Order, regular order, blanket line, line/release, and customer text
- Internal and external notes
- Planning item materials
- Serial numbers
- Euro values
- Prices

Exercise 3.2: Create a customer order

In this exercise, you will create a customer order.

Mountain Trail Bikes has placed their first order. They want to purchase five of our FA-10000s. They want to receive these bikes 15 days from today.

We are to use their purchase order (PO) number 56373 on any document we send them concerning this order.

Mountain Trails is expecting to hear from us soon, so be sure to print an order verification and send it to them ASAP.

Status = Ordered

One order line item for FA-10000, quantity = 5

Due Date = Today's date/15 days

Print the order verification for a customer order for Mountain Trails.

Exercise steps

Part 1: Create the customer order and customer order lines

1. Click the **Open** icon on the toolbar.
2. Type *customer orders* in the **Filter** field.
3. Click the **web.CustomerOrders** list item.
4. Click the **OK** button. The **Customer Orders** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Order** field.
8. Type *[your initials]** in the **Customer** field.
9. Click the **Customer** drop-down arrow.
10. Click the **[your customer number]** list item.
11. Type 56373 in the **Cust PO** field.
12. Click the **Save** icon.
13. Click the **Lines** menu option. The **Customer Order Lines (Linked)** form opens.
14. Type FA-10000 in the **Item** field.
15. Type 5 in the **Qty Ordered** field.

Note: The contract price for the item that we set up in the previous lesson displays in the **Unit Price** field.

16. Click to clear the **Allow on Pick Workbench** check box.

17. Click the **calendar** icon in the **Due Date** field. A calendar displays with the current month and year visible.
18. Click the **[today's date]** option.
19. Click the **Save** icon.
20. Write down your customer order number. _____
21. Click the **X** on the **Customer Order Lines (Linked)** form.

Part 2: Run the Order Verification Report

1. Click the **Order Verification Report** menu option. The **Order Verification Report** form opens.
2. Verify **[your customer order]** is populated for both the Starting and Ending Order fields.
3. Click the **Preview** button. The **Order Verification Report** opens in a new tab.

Note: the item, quantity, and pricing.

4. Close the **Order Verification Report** tab.
5. Click the **Window** drop-down.
6. Click the **Close All** list item.

Creating blanket customer orders

A blanket customer order differs from a regular customer order in that it allows for multiple release dates for each ordered item.

General

The following table describes the two fields in the Blanket Order Dates panel in the General tab of the Customer Orders form:

Name	Description
Effective	The Effective field specifies the earliest due date for a line/release. The effective date is the default value for the Effective Date field on the Customer Order Blanket Lines form, where it can be overwritten. The effective date is entered by the user to define the earliest due date for a line/release.
Expiration	The Expiration field specifies the latest due date for a line/release and becomes the default value for the Expiration Date field on the Customer Order Blanket Lines form, where it can be overwritten. The expiration date is entered by the user to update a blanket customer order.

Adding releases to blanket lines

The Customer Order Blanket Releases form identifies the release schedule required by the customer. The release quantity may exceed the blanket quantity. The Customer Order Blanket Releases form also identifies the line-item status, unit price, default tax code, reference and warehouse.

Exercise 3.3: Create a blanket customer order

In this exercise, you will create a blanket customer order.

Mountain Trail Bikes is pleased with our service so far and they want to purchase the CP-10000 padded seats, which is a repair part.

They requested that we set up a blanket order effective through the next year, with a quantity of 75 seats. They want to purchase a minimum quantity of five for each item every time they order.

Their purchase order number is 789248.

Set up releases for the next two months:

- One blanket order is effective today through today's date, next year
- One order line item, 75 seats
- Two releases, quantity five each

Exercise steps

Part 1: Create a blanket order and blanket order lines

1. Click the **Open** icon on the toolbar.
2. Type *customer orders* in the **Filter** field.
3. Click the **web.CustomerOrders** list item.
4. Click the **OK** button. The **Customer Orders** form opens
5. Click the **New** icon.
6. Type *[your initials]?* in the **Order** field.
7. Type *[your initials]** in the **Customer** field.
8. Click the **Customer** drop-down arrow.
9. Click **[your order number]** for Mountain Trail Bikes list item.
10. Type 789248 in the **Cust PO** field.
11. Click the **Order Type** drop-down arrow.
12. Click the **Blanket** list item.
13. Click the **Save** icon.
14. Click the **General** menu option.
15. Click the **calendar** icon in the **Effective Date** field. A calendar displays with the current month and year visible.
16. Click the **[date one year from today's date]** option.
17. Click the **Save** icon.

Part 2: Create the blanket order line and releases

1. Click the **Lines** menu option. The **Customer Order Blanket Lines (Linked)** form opens.

2. Type **cp*** in the **Item** field.
3. Click the **Item** drop-down arrow.
4. Click the **CP-10000** list item.
5. Type 75 in the **Blanket Quantity** field.
6. Click the **Save** icon.
7. Click the **Releases** button. The **Customer Order Blanket Releases (Linked)** form opens.
8. Click the **calendar** icon in the **Release Date** field. A calendar displays with the current month and year visible.
9. Click the **[today's date] Ordered Release** field.
10. Click the **Save** icon.
11. Click the **New** icon.
12. Click the **calendar** icon in the **Release Date** field. A calendar displays with the current month and year visible.
13. Click the **[date one year from today's date]** option.
14. Type 5 in the **Ordered Release** field.
15. Click the **Save** icon.
16. Click the **X** on the **Customer Order Blanket Releases (Linked)** form. You will return to the **Customer Order Blanket Lines (Linked)** form.

Part 3: Run the Order Verification Report

1. Click the **Open** icon on the toolbar.
2. Type *order verification* in the **Filter** field.
3. Click the **Order Verification Report** list item.
1. Click the **OK** button. The **Order Verification Report** form opens.
2. Type *[your initials]** in the **Order Starting** field.
3. Click the **Order Starting** drop-down arrow.
4. Click the **[your order number]** list item. The **Order Ending** field populates.
5. Click the **Preview** button. The **Order Verification Report** opens in a new tab.
Note: the item, quantity, and pricing.
6. Close the **Order Verification Report** tab.
7. Click the **Window** drop-down.
8. Click the **Close All** list item.

Using the Items form

If an item on a customer order exists in the system, it will have a product code, unit of measure, and cost information. The Items form is a record of all items purchased, manufactured, and/or sold.

There are other fields on an item record that are relevant to customer orders.

Customer order information

The table below describes the drop-down list and fields on the Items form that are relevant to customer orders:

Name	Description
Source	The selection from the Source drop-down list identifies whether an item is purchased, manufactured, or transferable between sites. This information is relevant when adding a customer order and creates a cross-reference to either a purchase order or a job order.
Quantity On Hand	The Quantity On Hand field displays the total quantity of the item for all warehouses available for shipping transactions.
Allocated To Customer Orders	The Allocated To Customer Orders field displays the quantity incremented when a customer order line item's status is set to Ordered. It is decreased when a customer order line is set to Filled or shipping transactions are performed against a line item.
Reserved For Customer Orders	The field displays the quantity of the item at all warehouses that is reserved for customer orders.

Check your understanding

?

If you enter an order on 1/1 and the system gives you a due date of 2/1, what field is setup as 30?

- a) Contract price
- b) Shrink factor
- c) Std due period
- d) Order type

?

What type of order allows for multiple release dates of each ordered item?

- a) Blanket customer order
- b) Regular customer order
- c) Scheduled customer order
- d) Split customer order

?

What report can you send to customers as order acknowledgement?

- a) Order verification report
- b) Order summary
- c) Sales Analysis
- d) Material transactions

Lesson 4: Using additional customer information

Estimated time

1 hour

Learning objectives

In this lesson, you will:

- List the steps to create a customer document profile.
- Explain how communications with a customer are recorded.
- Explain the different customer service forms.

Topics

- Setting up a customer document profile
- Recording customer communications
- Additional customer information overview

Additional customer information overview

There are other features in the system that you may find useful. There is additional information about a customer that you can maintain. This information includes:

- Setting up a customer document profile
- Recording customer interactions
- Customer Order Document Lifecycle
- Customer 360
- Customer Service Home

Setting up a customer document profile

The Customer Document Profile form is used to define how to send report output to customers. When generating a report for a range of customers, the system refers to each customer's document profile—if one exists and is active—to determine how to distribute the report output.

To distribute a report to multiple fax numbers or printers, create multiple profiles that each have a different fax number or printer.

All report output sent via email is sent in PDF format. The description entered on the Background Task Definition form is used as the subject of the email.

The customer document profile is subject to record collection caps. For example, if your collection cap is set at 100, and you attempt to send a report to 150 customers, only the first 100 will be processed.

Exercise 4.1: Create customer document profile

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *customer document profile* in the **Filter** field.
3. Click the **web.Customerdocprofile** list item.
4. Click the **OK** button. The **Customer Document Profile** form opens.
5. Click the **New** icon.
6. Type *[your initials]* * in the **Customer** field.
7. Click the **Customer** drop-down arrow.
8. Click the **[your customer number]** list item.
9. Click the **Ship To** drop-down arrow.
10. Click the **0** list item.
11. Click the **Method** drop-down arrow.
12. Click the **Email** list item.
13. Type *jane.doe@infor.com* in the **Destination** box.

14. Click the **Task Name** drop-down arrow.
15. Click the **Order Verification Report** list item.
16. Click to select the **Active** check box. **Note:** This check box enables this profile.
17. Click the **Save** icon.
18. Click the **X** on **Customer Document Profile**.

Recording customer communications

There are many reasons to keep a record of all communications that a company has with its customers. The ability to review all interactions with a customer improves customer service. The system provides some tools to record and view customer interactions, and to add notes to individual customer records.

Recording customer interactions

The Customer Interactions form is used to record and track all communication between you and your customers, including date, time, and contact information. You also can use this form to reply directly to incoming messages from the customer portal.

Customer notes

The Object Notes form is used to view, add, delete, and modify notes for a selected customer record. You can also attach or detach reusable notes. Up to 9,999 lines of text regarding this customer can be added.

Clicking **Attach Detach Reusable** allows you to select from a list of preconfigured system and class notes to attach to a current record.

Exercise 4.2: Customer communications

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *customer interactions* in the **Filter** field.
3. Click the **web.Customerinteractions** list item.
4. Click the **OK** button. The **Customer interactions** form opens.
5. Click the **New** icon.
6. Type *[your initials]** in the **Customer** field.
7. Click the **Customer** drop-down arrow.
8. Click the **[your customer number]** list item.
9. Click the **Topic** drop-down arrow.
10. Click the **Discounts** list item.

11. Type *customer asked for a discount code for their first order. I provided them with a code for free shipping* in the text box.
12. Click the **calendar** icon in the **Follow-Up Date** field. A calendar displays with the current month and year visible.
13. Click the **[date one week from today's date]** option.
14. Click the **Save** icon.
15. Click the **X** on the **Customer Interactions** form.

Customer Order Document Lifecycle form

The Customer Order Document Lifecycle form displays lifecycle data for a customer order in six grids. Each grid displays read-only fields about customer order estimates, customer orders, jobs, return merchant authorizations (RMAs), shipments, and invoices. The information in each grid of the Customer Order Document Lifecycle form is populated based on the record selected on the form with which it was opened.

Header

You can filter the grid view by four drop-down lists by selecting a customer order based on estimate, customer order number, RMA number, and invoice number.

The following table describes the drop-down lists on the Customer Order Document Lifecycle form header:

Name	Description
Estimate	The selection in the Estimate drop-down list displays customer order information that matches the selected estimate.
Customer Order	The selection in the Customer Order drop-down list displays customer order information that matches the selected customer order number.
RMA	The selection in the RMA drop-down list displays customer order information that matches the selected RMA.
Invoice	The selection in the Invoice drop-down list displays customer order information that matches the selected invoice.

Grids

The following table describes the grids on the Customer Order Document Lifecycle form:

Grid	Description
Estimates	The Estimates grid displays estimate information about the customer order. Fields on the Estimates grid include: • Estimate - The Estimate field displays the customer order estimate number. • Customer - The Customer field displays the customer number of the

Grid	Description
	customer order. • Status - The Status field displays the status of the customer order. • Quote Date - The Quote Date field displays the date the estimated was first quoted for the customer order. • Expiration Date - The Expiration Date field displays the expiration date of the customer order estimate. • Order - The Order field displays the customer order number. • Cust PO - The Cust PO field displays the customer PO number of the customer order. Contact - The Contact field displays the name and telephone number of the person who serves as an order contact for this customer.
Customer Orders	The Customer Orders grid displays order information about the customer order. Fields on the Customer Orders grid include: • Order - The Order field displays the customer order number. • Customer - The Customer field displays the customer number of the customer order. • Status - The Status field displays the status of the customer order. • Order Date - The Order Date field displays the date the customer order was placed. • Total Price - The Total Price field displays the total price of the customer order. • Cust PO - The Cust PO field displays the customer PO number of the customer order. • Contact - The Contact field displays the name and telephone number of the person who serves as an order contact for this customer. Type - The Type field displays the customer order type.
Jobs	The Jobs grid displays job information about the customer order. Fields on the Jobs grid include: • Job - The Job field displays the job number of the customer order. • Customer - The Customer field displays the customer number of the customer order. • Order - The Order field displays the customer order number. • Status - The Status field displays the status of the job associated with the customer order. • End Date - The End Date field displays the end date of the job associated with the customer order. • Completed - The Completed field displays the quantity completed for

Grid	Description
	the associated job. Revision - The Revision field displays the revision number of the job associated with the customer order.
RMAs	The RMAs grid displays RMA information about the customer order. Fields on the RMAs grid include: • RMA - The RMA field displays the RMA number associated with the customer order. • RMA Date - The RMA Date field displays the date the RMA was requested. • Status - The Status field displays the status of the RMA associated with the customer order. • Customer - The Customer field displays the customer number of the customer order. • Contact - The Contact field displays the name and telephone number of the person who serves as an order contact for this customer. Total Credit - The Total Credit field displays the total amount of credit issued for the customer order.
Shipments	The Shipments grid displays shipment information about the customer order. Fields on the Shipments grid include: • Order - The Order field displays the customer order number. • Ship Date - The Ship Date field displays the date the order was shipped. • Qty Shipped - The Qty Shipped field displays the quantity shipped with the customer order. • Qty Returned - The Qty Returned field displays the quantity returned with the customer order. • Qty Invoiced - The Qty Invoiced field displays the quantity invoiced for the customer order. • Customer - The Customer field displays the customer number of the customer order. Shipment - The Shipment field displays the identification (ID) number of the shipment.
Invoices	The Invoices grid displays invoice information about the customer order. Fields on the Invoices grid include: • Invoice - The Invoice field displays the invoice number. • Customer - The Customer field displays the customer number of the customer order.

Grid	Description
	• Order - The Order field displays the customer order number. • Invoice Date - The Invoice Date field displays the date the invoice was posted. • Total Price - The Total Price field displays the total price of the customer order. • Cust PO - The Cust PO field displays the customer PO number of the customer order. Shipment - The Shipment field displays the identification (ID) number of the shipment.
Payments	The Payments grid displays payment information about the customer order. Fields on the Payments grid include: • Customer - The Customer field displays the customer number of the customer order. • Paid Date - The Paid Date field displays the date the invoice was paid. • Paid Amount - The Paid Amount field displays the amount the invoice was paid. • Invoice - The Invoice field displays the invoice number. • Type - The Type field displays the payment type. • Chk/Ref - The Chk/Ref field displays the check number or reference number for the payment. Order - The Order field displays the customer order number.

You can view additional information regarding any item displayed on the grids by right clicking the item and selecting Details.

Navigation tree

The navigation tree displays a graphical summary of the data displayed in the grids. Double-clicking an item in the grid updates the drop-down lists in the header to reflect the selection and filters the grid information to display only information related to that item.

Exercise 4.3: Review Customer Order Document Lifecycle

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *customer order document lifecycle* in the **Filter** field.
3. Click the **Customer order document lifecycle** list item.
4. Click the **OK** button. The **Customer Order Document Lifecycle** form opens.
5. Type *[your initials]** in the **Customer Order** field.
6. Click the **Customer Order** drop-down arrow.
7. Click the **[your first customer order]** list item.
8. Review your order in the **Customer Orders** section. **Note:** Once the order has been shipped and invoiced you would see it on this form under the Shipments and Invoices section.
9. Click the **X** on the **Customer Order Document Lifecycle** form.

Customer 360 form

The Customer 360 form shows information from different reports and forms. The four main areas of the form are Company, CRM, Sales, and Service.

Heading	Additional Information
Company	Overview Credit Ship To Payment History AR Posted Transaction Summary Notes/Documents.
CRM	Sales Contacts Interactions Leads Opportunities
Sales	Customer Orders Estimate Orders Projects Contracts
Service	Service Orders Incidents Service Contracts Units

Exercise 4.4: Using Customer 360

In this exercise, you will review the Customer 360 information.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *customer 360* in the **Filter** field.
3. Click the **Customer 360** list item.
4. Click the **OK** button. The **Customer 360** form opens.
5. Type *Mountain Trail Bikes* in the **Find other customer** field.
6. Click the **Find other customer** drop-down arrow.
7. Click the **[your customer number]** list item. The company overview information is displayed.
8. Click the **Sales** menu drop-down arrow.
9. Click the **Customer Orders** list item.
10. Click the **View Details** button. The **Customer Orders (Linked)** form opens.
11. Click the **X** on the **Customer Orders (Linked)** form.
12. Click the **X** on the **Customer 360** form.

Customer Service Home form

The Customer Service Home form provides a wide variety of information from other parts of the system in one form. The information on this form is intended to be used by a customer service representative.

You can use the buttons displayed on the upper portion of this form to quickly open complementary applications. If an application is not installed, its button is inactive.

Buttons for complementary applications include:

- **Word** - opens Microsoft® Word®
- **Excel** - opens Microsoft® Excel®
- **Outlook** - opens Microsoft® Outlook®
- **Bing** - opens your default Internet browser and navigates to the Bing web page
- **Infor Xtreme Support** - opens your default Internet browser and navigates to the Support web page

The form is organized by the following tabs:

- Dashboard
- Navigator
- Tasks
- Flow
- Critical Numbers
- DataViews

Dashboard

The Dashboard tab on the Customer Service Home form lists links to forms and activities you need to fulfill your responsibilities as a customer service representative. The links are grouped in the following categories:

- Setup
- Estimates and Orders
- Activities
- Reporting and Analysis

The following table describes the information found on the Dashboard tab:

Dashboard tab information	Description
My Stats	My Stats contains three links: Alerts, Tasks, and Inbox. You are redirected to the Tasks tab if you click any of the links. The Tasks tab shows tasks and inbox messages. The number of alerts on the Tasks tab is broken down on the Items Below Safety Stock button or the Items Quarantined button.

Dashboard tab information	Description
Charts	The % On Time Shipments chart shows the percent of on-time shipments for the last three accounting periods and the current period.
	The Actual/Planned Shipping Amounts chart shows the previous three months, the current month, and the next two months based on the current date.
	The Key Today chart shows the amount of late orders as of today (current date), the amount of orders placed or updated today, and the amount of the return merchant authorizations (RMAs) entered today.
Grid	The Top 5 Orders to be Shipped features the top five customer orders by value where the status is Planned or Ordered and that have at least one CO line/release of Planned or Ordered status. The grid is sorted with the highest value first. The Due Date column shows the earliest due date of line/release for the order. The status image is red when the due date is before today; otherwise it is green.
Tree	My Interactions shows all the logged-in user's customer interactions in a tree view grouped by the current day, the last seven days, and the last thirty days.

Navigator

The Navigator tab on the Customer Service Home form includes the fields and tabs that are mostly read-only.

The following table describes two drop-down lists found on the Navigator tab:

Drop-down list	Description
Multi-Site Group	The Multi-Site Group drop-down list lets you view data in all shared multi-site groups including the group logged in to by the user. This drop-down list is required, and the default value comes from the multi-site group identified on the Users form for the logged-in user.
Customer	The Customer drop-down list lets you filter results by the customer selected from the drop-down list. If this drop-down list is cleared, all

Drop-down list	Description
	results appear in the grid. A check mark next to the customer name shows the customer account is not on credit hold. A problem indicator shows the customer account is on credit hold. This field does not apply to all tabs.

There are several sections on the Navigator tab that display different information about the status of the inventory.

Navigator tab section	Description
Hot List	The Hot List tab displays a list of items on customer orders which are potentially late. There are three grids on this tab: • Left grid – The left grid contains a list of items that fall in the criteria of being late. • Top-right grid – The top-right grid shows all customer order lines for the selected item on the left where the quantity ordered is greater than the quantity shipped and the status is "ordered." • Bottom-right grid – The bottom-right grid shows the planning detail data for the selected item on the left. Use the Cutoff Date field to compare against Order Line Due Dates to return any items where the projected on-hand quantity will be negative on or before the cutoff date. If this date is blank, the due date is not considered for the list of items. You can use the Customer field to filter results on this tab.
Price Availability	The Price Availability tab shows data similar to the Pricing form. Select a site from the Site drop-down list. All available sites are part of the chosen multi-site group. The Item field and the Cust Item (CI) field are enabled only if a site is selected. Select an item or customer item (if one is defined) from the fields on the left of the form. If a customer number is selected from the Customer drop-down list, pricing and history are specific to that customer. Otherwise, pricing is not customer-specific, and the Price History grid lists all item orders. Click Show to view the corresponding price history in the grid on the right side of the tab and pricing information on the left. Item availability is always displayed. Click Clear to clear all fields and grids.
Orders	The Orders tab displays the customer orders, order lines, and shipments. When the order in the grid on the left is selected, order lines show in the

Navigator tab section	Description
	grid on the top right. For blanket orders, only releases display. If you select an order line or release, shipments show in the grid at the bottom right. Use the radio buttons in the Order Filter area to select an option: • Past Due - returns any orders which contain at least one line where quantity shipped is less than the quantity ordered and due date is less than or equal to the current date • Open - returns all orders where the CO status is "Ordered" Credit Hold - returns any order with a credit hold on the order or any order which has a customer on credit hold
RMAs tab (Return Material Authorization)	The RMAs tab displays RMA information for the customer selected in the Customer field. If the Customer field is blank, all RMAs are shown.
Estimates	The Estimates tab displays the estimate orders for the customer selected in the Customer field. If the Customer field is blank, all estimate orders display.
Interactions	The Interactions tab displays interactions for the selected customer and site. The information is the same information on the Customer Interactions form.
Projects	The Projects tab lists all projects for the selected customer. If the Customer field is blank, all projects display.
Customer	The Customer tab displays the order contact and ship-to information for the selected customer. This tab is enabled only if a customer account is selected in the Customer field.
Receivables	The Receivables tab displays the same data in the grid as the A/R Posted Transactions Summary form with the following exceptions: • The site is the current site only. • The site does not appear in the grid. • The order number displays. When you select the Subordinate check box, you can view the posted transactions of subordinate customers. When the check box is cleared, only the posted transactions of customers are visible. This tab also includes aging buckets and a balance field for all the invoices shown. This tab is enabled only if a customer account is selected in the Customer field.

Navigator tab section	Description
CRM (Customer Relationship Management)	The CRM tab displays lead information in the top grid. This information comes from the Leads form. The information in the bottom grid comes from the Opportunities form. Both grids show data for the specific customer selected in the Customer field. If the Customer field is blank, all leads and opportunities are listed in the grids.
Contracts	The Contracts tab displays the customer items and the corresponding item number. Price break information appears below the grid for the selected item.
Transactions tab	The Transactions tab displays transactions that can be filtered with the check boxes at the top of the tab. Filter options are: • Ship or Withdrawal/Return - only records with a reference type of customer order, RMA, or project display • All Types - all reference types display You can also use the Customer field to filter results on this tab.
Margin	The Margin tab displays profit margin for items for the selected customer. If the Customer field is blank, all estimate orders display.

Tasks

The Tasks tab contains three sections:

- Alerts
- Tasks
- Inbox

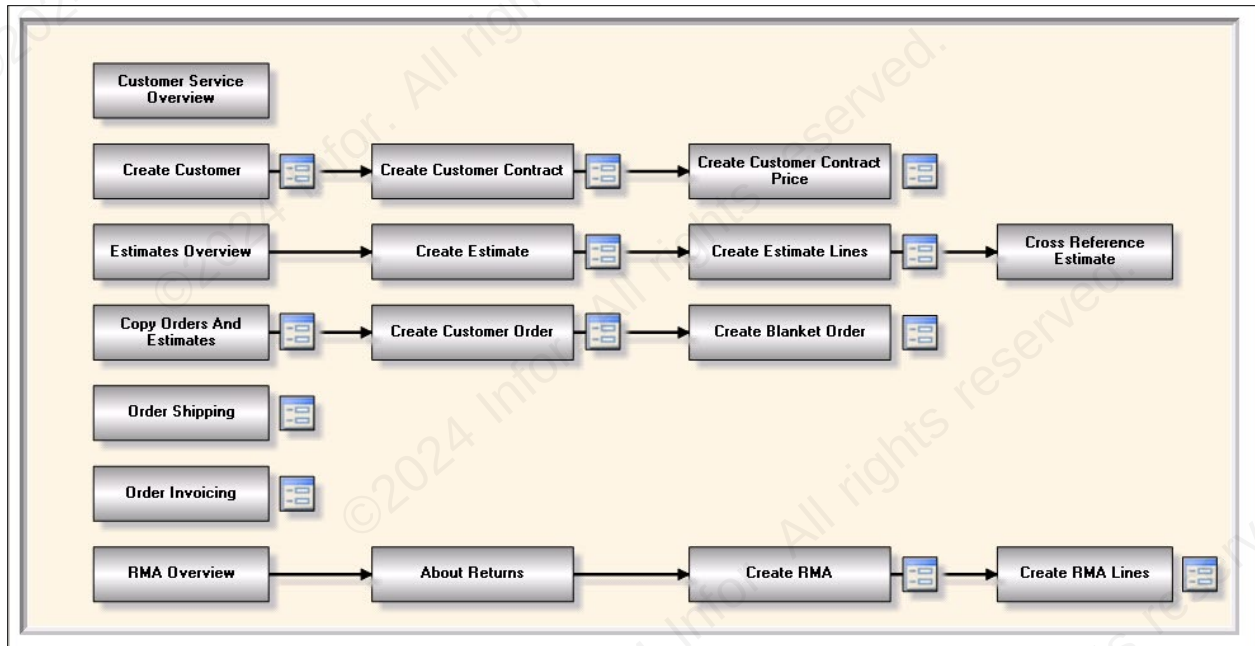

The following table describes the sections on the Tasks tab:

Tasks	Description
Alerts	The number values in the Alerts section display in red if the number is above zero. The number displays in green if the value is zero. If a number is red, it becomes an active button. Clicking a red number has the following results: • Past Due Lines - the Customer Order Lines form opens and displays the lines that have a CO status and CO line status of "Ordered," and the quantity shipped is less than the quantity ordered. • Past Due Releases - the Customer Order Blanket Releases form opens and displays the number of blanket CO releases that are past due as of today that have a CO status and CO line status of "Ordered," and the quantity shipped is less than the quantity ordered. Estimates to Expire - the Estimates form opens and displays the number of estimates that are about to expire within the next seven days with estimate and estimate line statuses of Planned, Quoted, or Working.
Tasks	The Tasks section displays in a grid with the tasks assigned to the logged-in user.
Inbox	The Inbox section displays in a grid with the messages for the logged-in user. Double-click a field in the Inbox grid to view all emails that share that value. The Inbox fields can be filtered except for "Read" and "Expired."

Flow

The Flow tab graphically depicts the typical workflow for customer service tasks. Common processes and tasks are arranged from left to right in logical sequences. The boxes on the tab are interactive.

- Small boxes (form icons) – double-clicking a small form icon opens the form that is used for that part of the process.
- Large boxes - double-clicking the larger boxes displays a Help window with information and instructions on completing the task.

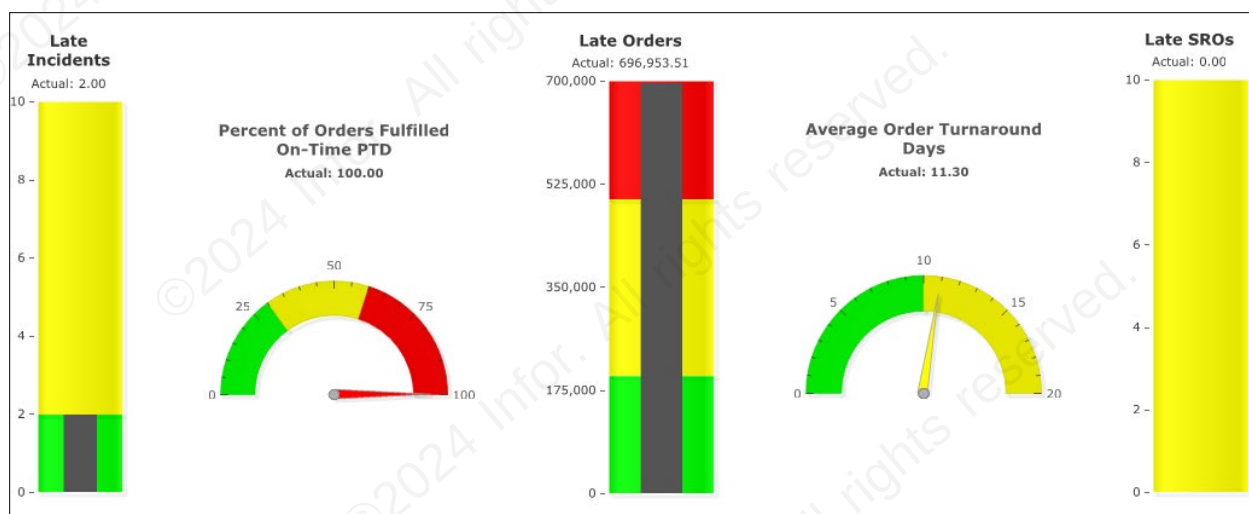

Customer Service Home form, Flow tab

Critical Numbers

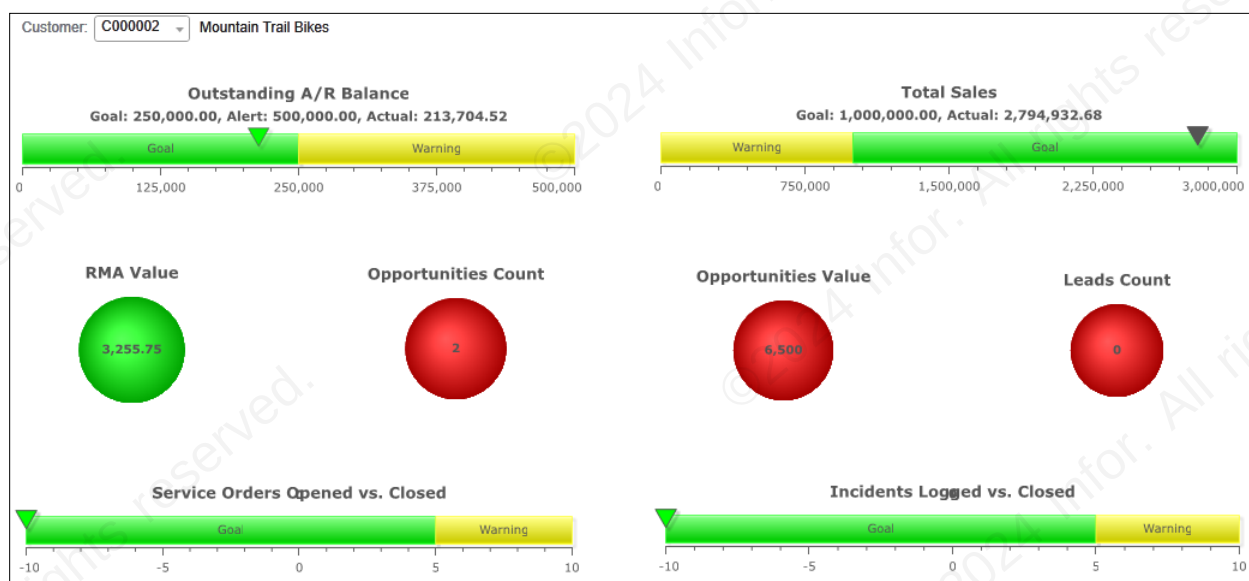

The Critical Numbers tab on the Customer Service Home form displays critical number gauges related to customer accounts and customer orders. This tab is only enabled for users with a Workbench license.

The following table describes sections on the Critical Numbers tab:

Section	Description
General	The General tab displays critical numbers related to the customer. Use the right-click options to alter the critical numbers.
Customer Specific	The Customer Specific tab displays critical numbers based on customer-specific information. You can filter by customer.

Customer Service Home form, Critical Numbers tab, General

Customer Service Home form, Critical Numbers tab, Customer Specific

DataViews

The DataViews tab on the Customer Service Home form shows DataViews related to the customer. This tab is only enabled for users with a Workbench license.

Use the radio buttons to select the DataView to display:

- Customer Orders
- RMAs (Return material authorizations)
- Projects
- Customer A/R History
- Opportunities
- Contracts

- Incidents
- SROs (service request orders)

Use the **Customer** field to filter by customer name.

For each DataView, you can select various source filters to refine the information that is displayed. The source filters available depend on the selected DataView. For example, if you select Customer Orders as the DataView, then available source filters are the customer order identifier and the five different order statuses.

About DataViews

With DataViews, you can view, parse, sort, group by, and filter data from the application within user-definable views and layouts. The DataView setup is similar to an Excel worksheet, displaying data in columns.

As with form personalization, the DataView structure supports user, group, and site level layouts. If needed, you can export the DataView to a printer, XPS file, or Excel .xls file. Additionally, you can navigate to the related maintenance form by clicking Details on the right-click context menu.

Exercise 4.5: Using Customer Service Home

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon on the toolbar.
2. Type *customer service home* in the **Filter** field.
3. Click the **Customer Service Home** list item.
4. Click the **OK** button. The **Customer Service Home** form opens.
5. Click the **Navigator** tab.
6. Type *[your initials] ** in the **Customer** field.
7. Click the **Customer** drop-down arrow.
8. Click the **[your customer number]** list item.
9. Click the **Orders** tab. Review the Items, and Order Lines section. **Note:** You should see your two orders created in previous exercises and the items on the orders.

Check your understanding

?

If you had a customer complaint that needed documented what is one form you could use to track the details of the conversation?

- a) Items
- b) Customer orders
- c) Customer interactions
- d) Customer Contract

?

If you want to check if a customer order has been shipped and invoiced what form could you use?

- e) Customer Order Document Lifecycle
- f) Order Verification Report
- g) Customers
- h) Customer Interactions

?

If your customer called and wants their order verification report emailed instead of faxed which form would u update?

- a) Items
- b) Customer document profile
- c) Customer options
- d) Customer 360

Course summary

Estimated time

.5

Learning objectives

Now that you have completed this course, you should be able to:

- Describe how to setup customers.
- Explain how to create regular and blanket customer orders.
- Explain the different customer service forms.
- Course review

Topics

- Course review

Course review

?

Which step is not part of creating a basic customer record?

- a) Open the customer order lines form.
- b) Type the billing address information.
- c) Type ship to information.
- d) Add credit limit

?

The _____ form is used to record and track all communication between you and your customers?

- a) Customers
- b) Customer Interactions
- c) Customer Portal
- d) Customer Document Profile

?

Which report is used to Confirm a customer order and provide acknowledgement of an order to the customer?

- a) To be Invoiced Report
- b) Order Verification Report
- c) Packing Slip
- d) Pick List

?

A _____ is an order that allows for multiple release dates of each ordered line

- a) Blanket customer order
- b) Regular customer order
- c) Scheduled customer order
- d) Split customer order

Appendices

The following are included in this section:

- Appendix A: User accounts
- Appendix B: Check your understanding answers
- Appendix C: Delivery Orders

Appendix A: User accounts

Your instructor will assign you a student user ID from the table listed below to use for class exercises.

Note: If you are taking this course as self-directed learning, refer to the Training Desktop Login Instructions on the Lab On Demand page.

Appendix B: Check your understanding answers

This section provides the answers to the questions found at the end of each lesson.

Lesson 2: Customers

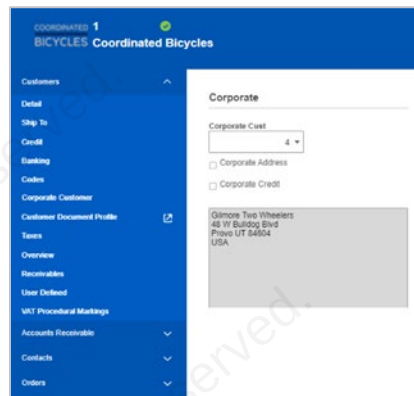

What does the icon above the customer name in the image above signify?

- a) Customer on credit hold
- b) Important Customer
- c) Record needs saved
- d) Customer record will be deleted upon save

In this example below Gilmore Two Wheelers is the corporate customer of Coordinated Bicycles. When making credit decisions for this customer which company's credit limit would it use?

- a) Coordinated Bicycles
- b) Gilmore Two Wheelers
- c) Coordinated Bicycles and Gilmore Two Wheelers combined credit limits
- d) System ignores credit limits

Lesson 3: Sales Order to Shipping

If you enter an order on 1/11 and the system gives you a due date of 2/1, what field is setup as 30?

- a) Contract price
- b) Shrink factor
- c) Std due period
- d) Order type

What type of order allows for multiple release dates of each ordered item?

- a) Blanket customer order
- b) Regular customer order
- c) Scheduled customer order
- e) Split customer order

What report can you send to customers as order acknowledgement?

- a) Order verification report
- b) Order summary
- c) Sales Analysis
- d) Material transactions

Lesson 4: Additional customer information

If you had a customer complaint that needed documented what is one form you could use to track the details of the conversation?

- a) Items
- b) Customer orders
- c) Customer interactions
- d) Customer Contract

If you want to check if a customer order has been shipped and invoiced what is a form you can use?

- a) Customer order document lifecycle
- b) Order Verification report
- c) Customers
- d) Customer interactions

If your customer called and wants their order verification report emailed instead of faxed which form would u update?

- a) Items
- b) Customer document profile
- c) Customer options
- d) Customer 360

Course review

?

Which step is not part of creating a basic customer record?

- a) Open the customer order lines form.
- b) Type the billing address information.
- c) Type ship to information.
- d) Add credit limit

?

The _____ form is used to record and track all communication between you and your customers?

- a) Customers
- b) Customer Interactions
- c) Customer Portal
- d) Customer Document Profile

?

Which report is used to Confirm a customer order and provide acknowledgement of an order to the customer?

- a) To be Invoiced Report
- b) Order Verification Report
- c) Packing Slip
- d) Pick List

?

A _____ is an order that allows for multiple release dates of each ordered line

- a) Blanket customer order
- b) Regular customer order
- c) Scheduled customer order
- d) Split customer order

Appendix C: Delivery orders

Delivery orders

The following processes are available through delivery orders (DOs):

- Bill of Lading
- Packing List
- Pro Forma Invoice
- Advance Ship Notice
- Generating an Electronic Data Interchange (EDI) Advance Ship Notice (ASN) for a Delivery Order for an EDI Customer

Delivery orders can be generated many ways and are comprised of three major forms:

Delivery Orders (header)

The **Delivery Orders** form provides for the creation, modification, and deletion of delivery order records. A delivery order can be associated with a customer ship-to address.

Delivery Order Lines (like a blanket order line concept)

The **Delivery Order Lines** form provides for the creation, modification, and deletion of delivery order line records.

Delivery order lines should be thought of as one delivery unit. This might be a truck, a container, or any other device capable of delivering product from one location to another.

Delivery Order Line Sequences (customer order [CO] ship records)

The **Delivery Order Line Sequence** form provides for the creation, modification, and deletion of delivery order line sequence records. A delivery order line sequence record must contain a reference or a "link" to a specific customer regular order line or customer blanket order line/release shipment record.

Delivery order line sequence records can only be created, updated, and deleted during or after the shipping process has been performed. During shipping, a specific pending ship transaction line might be tied to a delivery order and line. (Delivery order and delivery order line browse capability are provided during the data entry of the pending ship transaction.)

The delivery order must exist, otherwise the system generates an error. If a valid value is specified for the delivery order, then you may enter a valid line for the delivery order or leave it blank to allow the system to generate the next line for you. Upon posting the pending ship transaction and creating an order shipment record, the system creates a delivery order line sequence record containing a reference to the order shipment record.

For any given customer, one or more delivery orders may exist with one or more delivery order lines, each containing zero, one, or more delivery order line sequence records, each linked directly with a CO shipment record.

Delivery order invoicing options

There are several delivery invoicing options:

- Generating an invoice for a specific delivery order
- Generating an invoice for each customer purchase order linked to a delivery order

Note: All CO shipment records linked to the delivery order and associated with a specific customer purchase order via the customer order are invoiced together on one invoice.

- Consolidating multiple delivery orders onto one invoice

Note: All shipments associated with the delivery order are invoiced together; no partial invoicing of a delivery order's shipments may occur.

For the first two invoicing options, a delivery order is associated with the invoice header and displays along with the invoice number when selecting invoices to which payments are applied.

Delivery Orders form

The **Delivery Orders** form is used to create delivery order headers. The header defines the customer and ship-to address to which the lines and sequences are tied.

Cost Info tab

The **Cost Info** tab tracks the estimated and pre-paid costs for the delivery order.

Consignee tab

The **Consignee** tab identifies the name of the company that is to receive the freight. This will default from the customer master record and can be overridden at the delivery order (DO) header level.

Consignor

The **Consignor** tab identifies the company name and the address of the warehouse from where the goods are being shipped.

Invoicee tab

The **Invoicee** tab identifies the bill-to name and address for the delivery order. The bill-to information will default from the customer record for this customer and can be overridden.

The selection from the **DO Invoice** drop-down list identifies the type of invoice the delivery order uses. Options are **Consolidated**, **Single**, and **Single by PO**.

The selection from the **Invoice Freq** drop-down list identifies the frequency with which consolidated invoices will be generated. Options are **Daily**, **Weekly**, **Bimonthly**, **Monthly**, **Other**, and **Hold**.

Special tab

The **Special** tab allows you to enter up to two lines of special instructions for this bill. This text prints on the bill of lading.

The **Physically Shipped?** check box, when selected, time stamps the current date and time of the physical shipment. These times are generated from the system.

Consignor Contact tab

The **Consignor Contact** tab identifies the name of the primary contact person.

On the **Delivery Orders - Invoicee** tab, the customer contact entered on the **Customers** form is used by default if the **Corporate Address** field is selected.

Delivery Order Lines form

The **Delivery Order Lines** form is used to add lines to your delivery order. Each line represents a single container or package. All line records that have been created for this delivery order display in the browser at the bottom of the form, and can be updated if the status remains In Process.

The following table describes the fields on the **Delivery Order Lines** form:

Field	Description
Rate Code field	The Rate Code field specifies the appropriate class/rate code for this DO/bill of lading (BOL) line item. This code is required to describe the rate classification of the shipped commodity.
NMFC (National Motor Freight Code) field	The NMFC field identifies the National Motor Freight Code.
Line Weight field	The Line Weight field specifies the cumulative weight for all of the sequences that comprise this line.

Delivery Order Line Sequences form

The **Delivery Order Line Sequences** form is used to add line sequences to your delivery order. Each line sequence represents a customer order line. All sequences that have been added to this delivery order display in the grid at the bottom of the form.

A customer order line cannot be added as a sequence until it has been shipped.

The DO line represents the method of shipment, such as a box or crate. The sequence represents the actual order and line that was shipped. Once the shipment is completed in either the **Shipping Processing Orders** or **Order Shipping** form, the sequence is created.

Order Shipping form

The **Order Shipping** form is used to enter shipping transactions and track shipped items by ship date. Before generating a regular invoice for an item or an order, you must ship that item or order. Once you ship an item, it will appear on the **To Be Invoiced** report.

This functionality is different from the picking, packing, and shipping functionality, and it is recommended that you either choose to use the picking, packing, and shipping functionality or use the standard shipping functionality (Order Shipping form). They were not designed to be used together. Even though the two are separate, there is some interaction. If you ship a quantity through the Order Shipping form or return a quantity through it, the Pick Workbench is aware of the process. If there is quantity in use through the picking, packing, and shipping process, the Order Shipping form is aware of the process.

Shipping Processing Orders form

The **Shipping Processing Orders** form allows you to process multiple orders automatically. The selection from the **DO/BOL** drop-down list on the **Shipping Processing Orders** form identifies a delivery order number to assign to the current batch. Only delivery orders with a status of In Process appear in the drop-down list.

Shipping Processing Line Release form

The **Shipping Processing Line Release** form allows you to view the line/releases for a particular order so you can decide which line/releases you want to process with the batch of orders displayed on the **Shipping Processing Orders** form. The **DO Line** field on the **Shipping Processing Line Release** form specifies the DO Line where the shipment is posted.
