About this workbook

Welcome to this Infor Education course! We hope you will find this learning experience enjoyable and instructive. This Training Workbook is designed to support the following forms of learning:

- Classroom instructor-led training with an Infor certified instructor
- Virtual classroom instructor-led training with an Infor certified instructor
- Self-directed learning through Infor Campus

This Training Workbook is not intended for use as a product user guide.

Workbook design

This Training Workbook contains both conceptual information to introduce topics and step-by-step procedural instructions for practical application of those concepts.

Symbols and notes are provided throughout this Training Workbook for ease of reference. Refer to the *Symbols used in this workbook* section below to familiarize yourself with these symbols.

Instructor-led training (ILT)

If you are taking this course as ILT, your instructor will provide details on accessing the Infor Education Training Environment needed to complete the student exercises. Your instructor will also assign you and other students an account login and password from [Appendix A](#) of this Training Workbook.

Instructors will perform the demos outlined in this Training Workbook. If you are taking this course as ILT, do not attempt to complete any steps within any demos; otherwise, it could adversely affect the training environment, the intended flow of the course, and the success and quality of the course for all students in the class.

Self-directed learning (SDL)

If you are taking this course via Infor Campus as SDL, refer to the Lab on Demand screen in the self-directed learning course for course environment information. The Lab on Demand screen includes instructions and logins to launch and access the corresponding Infor Education Training Environment as well as logins and passwords required for completion of course exercises and demos.

The exercises and demos in this course build upon each other as they prepare the system for subsequent exercises and demos. If you are taking this course as SDL, you must complete all of the exercises and demos in the order they are presented in the Training Workbook. This ensures you will achieve the expected results and a successful course outcome.

Instructor-recorded presentations and simulations (SDL only)

If you are taking this course as SDL, there may be instructor-recorded presentations and/or simulations available to assist you.

If instructor-recorded presentations are available, a hyperlink to the recording will be included on the first page of each corresponding lesson of the interactive workbook on the Training Workbook tab of the self-directed learning course.

If simulations are available, the demos and exercises throughout the interactive Training Workbook will include hyperlinks to simulations that allow you to view and/or practice the execution of the demo or exercise. These same simulations are also accessible via the Demonstrations tab of the self-directed learning course.

Learning Libraries

Learning Libraries in Infor Campus include learning materials that are available to you online, anytime, anywhere. These materials can supplement instructor-led training, providing you with additional learning resources to support your day-to-day business tasks and activities.

Please note that if you accessed this Training Workbook directly via a Learning Library, you will not have access to the Infor Education Training Environment that is provided with all instructor-led and most self-directed learning course versions, as referenced above. Therefore, you will not be able to practice the exercises in the specific Training Environment for which the exercises in this Training Workbook were written.

Course overview

Estimated time

0.25 hours

Learning objectives

Upon completion of this course, you should be able to:

- Explain the capabilities of the receiving process.
- Describe how to perform purchase order receiving.
- Describe how to process purchase order returns.

Topics

- Course description and agenda

Course description and agenda

This course covers fundamental receiving concepts in the Procure To Pay process for the receiving clerk role.

Course duration

1.25 hours

Prerequisite courses

- SyteLine: Navigating the User Interface
- SyteLine: Foundation

Prerequisite knowledge

To optimize your learning experience, Infor recommends that you have the following knowledge prior to taking this course:

- Knowledge of how data is structured and organized
- Ability to navigate the user interface

Audience

- Customer User
- Pre-Sales Consultant
- Business Consultant
- Technical Consultant
- Support
- System Administrator

System requirements

- SyteLine Training Environment

Reference materials

Infor SyteLine reference materials are available from the following locations:

- SyteLine Help menu
- Infor Concierge®

Course agenda

The agenda below details the contents of this course, including lesson-level learning objectives and supporting objectives.

Lesson	Lesson title	Learning objectives	Estimated time (hours)
Course overview		Review course expectations.	0.25
1	Using Procure To Pay	Explain the capabilities of the Procure To Pay business process, in relation to receiving. • Review purchasing functionality. • Describe the elements of the Procure To Pay Industry Process Catalog.	0.25
2	Receiving purchase orders	Describe how to perform purchase order receiving. • Explain how to perform purchase order receiving.	0.25
3	Returning purchase orders	Describe how to process purchase order returns. • Explain how to complete a purchase order return.	0.50
Course summary		Debrief course.	0.0

Appendices

This section contains information that is not part of the instructional content of this course, but it provides additional related reference information.

Appendix	Appendix title	Content description
Appendix A	User accounts	This appendix provides a reference for student and instructor login credentials and if applicable, assigned exercise data.
Appendix B	Check your understanding answers	This appendix provides answers to the check your understanding questions found at the end of each lesson.

Lesson 1: Using Procure To Pay

Estimated time

0.25 hours

Learning objectives

After completing this lesson, you will be able to explain the capabilities of the receiving process. In this lesson, you will:

- Review receiving functionality.
- Describe the elements of the Procure To Pay process within the Industry Process Catalog.

Topics

- Receiving overview
- Procure To Pay business process overview

Receiving overview

Purchasing supports your company in managing its expenditures and reimbursing vendors promptly for services or goods provided. Your company can use the purchase order to ensure that the correct items are received and to authorize payments.

Purchasing Functionality

- Using Purchasing, you can enter, generate, monitor, and receive purchase orders to improve material movement and inventory level management.
- You can set up parameters to set default values for purchase orders, including tolerance factors for purchase order receiving.
- Purchasing also includes the Purchase Order Receiving form, through which you enter whether you are receiving a whole/partial order or a whole/partial line/release.

Procure To Pay business process overview

Infor Industry Process Catalog (IPC) for CloudSuite Industrial (SyteLine) is preconfigured content targeted at your organization's industry. It provides a collection of assets including configurations, processes, and test cases, covering your organization's core needs. This content can be used to streamline the implementation process of this CloudSuite, helping you to save time and money and takes the guesswork out of deployment. The result is an affordable solution that can meet today's requirements and potential for tomorrow. It also provides the possibility for a faster ROI and time-to-benefit that is measured in weeks instead of months or years.

In this course we will refer to the IPC as business processes.

The Procure To Pay business process includes the activities associated to buying items from vendors, receiving them, paying vendors, and returning items for a credit.

Procure To Pay business process diagram

There are four main components of the Procure To Pay business process, as shown in the diagram above. This course focuses on the receiving process within Purchase Order To Receipt and Return To Debit components as outlined.

Key Capabilities

The Procure To Pay business process is supported by a variety of functions within Infor SyteLine to do the following, in relation to receiving:

- Set up parameters to set default values for purchase orders, including tolerance factors for purchase order receiving.
- Receive a whole/partial order or a whole/partial line/release.
- Returning goods to the vendor.

Purchase Order To Receipt process

The Purchase Order To Receipt process allows a company to manage purchasing requirements with vendors, concluding with the receipt of the purchase order lines into stock.

Purchase orders are used to ensure that the correct items are received and to authorize vendor payments.

Purchase Order To Receipt business process diagram

Return To Debit process

The Return To Debit process is used to return an item to a vendor.

Return To Debit business process diagram

Lesson 2: Receiving purchase orders

Estimated time

0.25 hours

Learning objectives

After completing this lesson, you will be able to describe how to perform purchase order receiving. In this lesson, you will:

- Explain how to perform purchase order receiving.

Topics

- Purchasing parameters overview
- Purchase order receiving

Purchasing parameters overview

You can use the Purchasing Parameters form to specify default values for purchase orders.

Typically, an Administrator would set parameters.

Purchasing Parameters

Use this form to enter default values for use throughout purchasing.

- Set up PO tolerance factors for receiving.

General tab

The following table displays the key field on the General tab used to set default values for purchase order receiving and provides a brief description of each.

Field	Description
PO Tolerance Over (%)	Determines what quantities can be received above the ordered quantity. The PO Tolerance Over field can be blank, 0, or any positive number. • When PO Tolerance Over field is blank, you may receive any quantity above the ordered quantity. When it is 0, you receive what has been ordered, and nothing more. When it is a positive number, you may receive up to that upper tolerance limit (receiving a warning message); beyond the tolerance limit, the system displays an error message. • When a new item is added to the system and the item's Source field is set to Purchased, the PO Tolerance Over value from the Purchasing Parameters form serves as the default value on the Items or Multi-Site Items form. You can then specify a new tolerance factor for the item by entering a new value. The value on the Purchasing Parameters form is only used as the initial default for the Items form and is not used during PO receiving. • When the Source field for an existing item is changed to Purchased, the PO Tolerance Over field is enabled on the Items or Multi-Site Items form. When the Source field for an existing item is changed from Purchased to something else, the PO Tolerance Over field value is set to a null value and the field is disabled.
PO Tolerance Under (%)	Determines what quantities can be received below the ordered quantity. • The PO Tolerance Under field can be blank, 0, or any positive number. This determines what quantities can be received below the ordered quantity and when the PO Line status changes to Filled. • When the PO Tolerance Under is blank, you may receive any quantity below the ordered quantity; PO Line status is set to Filled if the received quantity is equal to or more than the ordered quantity. When the value in the field is 0, you receive what has been ordered and

Field	Description
	nothing less; PO Line status is set to Filled if received quantity is equal to the ordered quantity. When the value in the field is a positive number, you may receive any quantity below the ordered quantity; PO Line status is set to Filled if the received quantity is equal to or greater than the lower tolerance limit. • When a new item is added to the system and the Source field for the item is set to Purchased, the PO Tolerance Under value from the Purchasing Parameters form serves as the default value on the Items or Multi-Site Items form. You can then specify a new tolerance factor for the item by entering a new value. The value on the Purchasing Parameters form is only used as the initial default for the Items form and is not used during PO receiving. • When an existing item's Source field is changed to Purchased, the PO Tolerance Under field is enabled on the Items or Multi-Site Items form. When an existing item's Source field is changed from Purchased to something else, the PO Tolerance Under field is set to a null value and the field is disabled.
Use PO Tolerance % for Non-Inventory Items	Select this checkbox to apply the PO Tolerance Over and PO Tolerance Under settings to non-inventoried items. If this field is not selected, a warning will continue to display when you over-receive a non-inventory PO line.

Purchase order receiving

Generate a purchase order receiving list

The PO Receiving List form shows the items on a purchase order so that you can check off each item as you receive it (pick list). The report also includes the lot number and location of each item, and the vendor item number if selected.

Note: At the time of a PO receipt, if the item (which is reserved) is cross-referenced to an order, the system automatically creates a reservation for the line item that is equal to the (quantity ordered - quantity shipped + quantity returned - quantity reserved) up to the amount that was received. If more is received, the extra goes into inventory.

You can generate a report of all items for a specified PO; its receiving items are posted. This report provides you with a list so that each item can be checked off as it is received, or the system automatically posts all material issues.

Selecting the Post Material Receipts check box on this form indicates the system should automatically receive transactions for all items on the order. A cleared check box indicates the receiving transactions will be completed manually. With either selection, a hard copy of the receiving list prints.

Purchase Order Receiving form

The Purchase Order Receiving form is used to receive line items from a purchase order. Upon receipt, a material transaction is created.

You can either select a single purchase order or select a vendor. Selecting the vendor displays all purchase orders for that vendor.

When you select a purchase order, all remaining line items to be received are loaded into a batch file. You then have an opportunity to add, update and delete specific line items or receive all line items on the purchase order at once.

The Change Warehouse form is accessible from the Actions menu. You can only receive line items for one warehouse at a time, so use this menu option to switch to a different warehouse.

Buttons

Button	Description
Add Line	Click this button to add a receiving line. It displays the Add Receiving Line form.
Clear All	Click this button to clear all information from this form.
Select All	Click this button to mark all records for processing.
Deselect All	Click this button to clear the selection indicator (check mark) from all selected records.

Button	Description
Add Purchase Order	Click this button to display purchase orders. The Add PO form displays.
Receive	Click this button to receive the selected line/lines. When you receive the line, a message displays. The Destination in the Detail tab determines how the line is received. For example, if the destination for the line is Inventory, the item is received into Inventory. When you try to receive a lot-tracked item, the Add Lots modal form is opened.

Supplementary tab

This tab displays the Ordered quantity, Received quantity, Rejected quantity, Order Date and Last Rcvd.

Exercise 2.1: Receive inventory from a blanket purchase order

In this exercise, you will generate a PO receiving list for blanket purchase order DP00000189 and then you will fully receive the first line and short receive the second line on that order.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Generate PO receiving list

1. Click the **Open** icon on the toolbar.
1. Type *PO receiving* in the **Filter** field.
2. Click the **PO Receiving List** list item.
3. Click the **OK** button. The **PO Receiving List** form opens.
4. Type *dp189* in the **PO Number** field.
5. Press **Tab**.
6. Click the **Print** button. The **PO Receiving List** opens in a new tab.
7. Note the Item, Location, Qty Ordered and To Receive.
8. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
9. Click the **OK** button.
10. Click the **X** on the **PO Receiving List** form.

Part 2: Receive two lines

1. Click the **Open** icon on the toolbar.
2. Type *purchase order receiving* in the **Filter** field.
3. Click the **Purchase Order Receiving** form list item.
4. Click the **OK** button. The **Purchase Order Receiving** form opens.
5. Type *dp189* in the **PO** field.
6. Press **Tab**.
7. Click to select the **Select** check box for the **first line item**.

Note: the Receive Qty field is automatically populated with the quantity to be received.

8. Verify **RAW-1** is selected in the **Location** field. This is found on the lower part of the form.
Note the Item and Description.
9. Click to select the **Select** check box for the **second line item**.
10. Type *70* in the **Receive Qty** field.
11. Press **Tab**.
12. Verify **RAW-1** is selected in the **Location** field.

13. Click the **Receive** button. A dialog box opens with the message, "2 Pending PO Receiving Transaction(s) were posted."

14. Click the **OK** button. A dialog box opens with the message, "[Create Receiver] was successful for CP-10000 that has [Receiver Num: XXX] and [Location: QC INSP]."

Note: This message displays only if you are using QCS-Supplier.

15. Click the **OK** button.
16. Click the **X** on the **Purchase Order Receiving** form.

Troubleshooting purchase order receiving

If you are unable to receive your PO, verify the status of your PO. If the status is Planned, you have two options to correct.

- Purchase Order Report – select the Post Status Changes check box prior to printing
- Purchase Order Lines – manually change the status to Ordered

System impacts: purchase order receiving

The forms that can be reviewed to verify a PO was received are identified in the following table.

Form	Field or item to review
Purchase Order Lines - Costs	Received field = total received Last Rcvd field = current date

Form	Field or item to review
Purchase Order Listing	Status field = Filled Received field is updated
Items - Detail	Verify Quantity on Hand.
Item Stockroom Locations	Review Location and Location on Hand fields.
Journal Entries - PO Dist	In the reference column note the INV PRCV (Inventory Purchase order receiving) for the PO and line, a debit to Inventory Material and a credit to Vouchers Payable.
Vouchers Payable Report	Review report.
Material Transactions	Review transactions.

Check your understanding

You use the PO Receiving List form to generate and print an optional report that helps identify items, quantities, and stock locations of inventory you will be receiving from a purchase order. What does selecting the Post Material Receipts check box on this form indicate?

- a) A purchase order requisition should be created from a customer order
- b) The system should automatically receive transactions for all items on the order
- c) The receiving transactions should be completed manually
- d) The system should automatically create change order records whenever purchase order maintenance occurs

Which of the following forms interfaces with inventory control to allow for real-time processing of material receipts?

- a) Drop Ship To
- b) Purchase Order Requisitions
- c) Purchase Order Receiving
- d) Material Planner Workbench

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 3: Returning purchase orders

Estimated time

0.5 hours

Learning objectives

After completing this lesson, you will be able to describe how to process purchase order returns. In this lesson, you will:

- Explain how to complete a purchase order return.

Topics

- Purchase order returns prior to vouchering
- Purchase order returns after vouchering

Purchase order returns prior to vouchering

Purchase order return prior to voucher process diagram

You enter purchase order returns on the Purchase Order Receiving form. Returns can be generated prior to vouchering or after vouchering (known as a Debit return).

When completing returns prior to vouchering:

- The DR Return checkbox is not available.
- A negative receive quantity must be entered.
- A stock location to return from must be selected.
- Enter a reason code identifying the reason for the return.

Exercise 3.1: Return inventory prior to vouchering

In this exercise, you will complete a transaction to record the return of three pints, as they were lacquer and not paint.

Before you begin:

- Ensure you have completed Exercise 2.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Form** drop-down arrow. A menu opens.
2. Click the **Purchase Order Receiving** list item. The **Purchase Order Receiving** form opens.
3. Type *dp189* in the **PO Number** field.
4. Press **Tab**.

Note: the received line items are not displayed in the grid. This is because the purchase order lines have been received.

5. Click the **PO Line/Release Status** drop-down arrow.
6. Click the **Filled** list item. The grid updates to display the received lines.
7. Click the **Supplementary** tab.
Note the quantity received and the last received date.
8. Click to select the **Select** check box for the **Line 1**.
To quickly determine if the line has been vouchered or not, select the **DR Return** check box. If it will not let you select the check box, this means that the line has not been vouchered and you need to do a negative return.
9. Type -3 in the **Receive Qty** field.
10. Press **Tab**.
11. Click in the **Reason Code** field.
Note: In this application, to enable the field drop-down arrow you must click in the text field.
12. Click the **Reason Code** drop-down arrow.
13. Click the **WIS** list item.
14. Click the **Detail** tab.
15. Verify **RAW-1** is selected in the **Location** field found on the **Detail** tab in the lower part of the form.
16. Click the **Receive** button. A dialog box opens with the message, "1 Pending PO Receiving Transaction(s) were posted."
17. Click the **OK** button.
18. Click the **X** on the **Purchase Order Receiving** form.

Purchase order returns after vouchering

Purchase order return after vouchering process diagram

When completing returns after vouchering:

- The DR Return checkbox must be selected.
- A positive receive quantity must be entered.
- A stock location to return from must be selected.
- Enter a reason code identifying the reason for the return.

Note: To use the DR Return checkbox, the voucher amount must be greater than zero, and the To Container checkbox must be cleared.

If items that are received into a non-nettable location are inspected and rejects are identified, you can enter a positive quantity in the Reject Qty field to populate the vendor YTD rejection information appropriately. All other return processes remain the same.

Exercise 3.2: Return inventory after vouchering

In this exercise, you will be returning one TC-11000, Base Tablet Computer, to the vendor as the tablet configurations were not set up properly. This item has already been matched to an invoice. When you perform the return transaction this allows accounting to create a debit memo.

This item is a serialized item and you will be selecting a serial number for the return.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Form** drop-down arrow. A menu opens.

2. Click the **Purchase Order Receiving** list item. The **Purchase Order Receiving** form opens.
3. Type *dp60* in the **PO Number** field.
4. Press **Tab**. A dialog box opens with the message, "Not one PO Line exists." This is because the purchase order lines have been received.
5. Click the **OK** button.
6. Click the **PO Line/Release Status** drop-down arrow.
7. Click the **Filled** list item. The grid updates to display the received line.
8. Click to select the **Select** check box for the **Line 1**.
9. Click to select the **DR Return** check box for the line item. **Note:** you are able to select the check box. This means that the PO line has been vouchered and you must do a positive return.
10. Type *1.00* in the **Receive Qty** field.
11. Press **Tab**.
12. Click in the **Reason Code** field.
13. Click the **Reason Code** drop-down arrow.
14. Click the **PVQ** list item.
Note: The Serial Numbers tab is enabled. This is because this item is a serialized item.
15. Click the **Serial Numbers** tab.
Note: The Target Qty is 1 and the Selected Qty is 0.
16. Click to select the **Select** checkbox for Line 1.
17. Verify the Selected Qty field displays 1.
18. Click the **Receive** button. A dialog box opens with the message, "1 Pending PO Receiving Transaction(s) were posted."
19. Click the **OK** button.
20. Click the **X** on the **Purchase Order Receiving** form.

Check your understanding

When completing returns prior to vouchering, which two of the following are true?

- a) A negative receive quantity must be entered
- b) A positive receive quantity must be entered
- c) A stock location to return from must be selected
- d) The DR Return field is available

Refer to [Appendix B](#) for answers to the check your understanding questions.

Course summary

Estimated time

0.0 hours

Learning objectives

Now that you have completed this course, you should be able to:

- Explain the capabilities of the receiving process.
- Describe how to perform purchase order receiving.
- Describe how to process purchase order returns.

Topics

- Course review

Appendices

The following are included in this section:

- Appendix A: User accounts
- Appendix B: Check your understanding (CYU) answers
- Appendix C: Purchasing reports and utilities
- Appendix D: Letters of credit (LCR)
- Appendix E: Goods receiving notes (GRN)

Appendix A: User accounts

Your instructor will assign you a student user ID from the table listed below to use for class exercises.

Appendix B: Check your understanding answers

This section provides the answers to the questions found at the end of each lesson.

Lesson 2: Receiving purchase orders

?

You use the PO Receiving List form to generate and print an optional report that helps identify items, quantities, and stock locations of inventory you will be receiving from a purchase order. What does selecting the Post Material Receipts check box on this form indicate?

- a) A purchase order requisition should be created from a customer order
- b) The system should automatically receive transactions for all items on the order
- c) The receiving transactions should be completed manually
- d) The system should automatically create change order records whenever purchase order maintenance occurs

?

Which of the following forms interfaces with inventory control to allow for real-time processing of material receipts?

- a) Drop Ship To
- b) Purchase Order Requisitions
- c) Purchase Order Receiving
- d) Material Planner Workbench

Lesson 3: Returning purchase orders

?

When completing returns prior to vouchering, which two of the following are true?

- a) A negative receive quantity must be entered
- b) A positive receive quantity must be entered
- c) A stock location to return from must be selected
- d) The DR Return field is available
