About this workbook

Welcome to this Infor Education course! We hope you will find this learning experience enjoyable and instructive. This Training Workbook is designed to support the following forms of learning:

- Classroom instructor-led training with an Infor certified instructor
- Virtual classroom instructor-led training with an Infor certified instructor
- Self-directed learning through Infor Campus

This Training Workbook is not intended for use as a product user guide.

Workbook design

This Training Workbook contains both conceptual information to introduce topics and step-by-step procedural instructions for practical application of those concepts.

Symbols and notes are provided throughout this Training Workbook for ease of reference. Refer to the *Symbols used in this workbook* section below to familiarize yourself with these symbols.

The PDF bookmarks pane provides quick and easy navigation between lessons, topics, and appendices, when needed.

Instructor-led training (ILT)

If you are taking this course as ILT, your instructor will provide details on accessing the Infor Education Training Environment needed to complete the student exercises. Your instructor will also assign you and other students an account login and password from Appendix A of this Training Workbook.

Some exercises in this workbook cannot be performed in the live Training Environment that is shared by multiple students during class. In these instances, a hyperlink to a recorded simulation is provided in the Training Workbook for your reference. Your instructor may also perform the exercises one time in the system on behalf of the class, if needed. Do not attempt to complete the steps for any of these demos in the system. Doing so could adversely affect the Training Environment, the intended flow of the course, and the success and quality of the course for all students in the class.

Self-directed learning (SDL)

Some SDL courses offer Lab on Demand in addition to simulations. If you are taking this course through Infor Campus as SDL, and the course offers Lab on Demand, refer to the Lab on Demand screen in the self-directed learning course for course environment information. The Lab on Demand screen includes instructions and logins to launch and access the corresponding Infor Education Training Environment as well as logins and passwords required for completion of course exercises and demos.

The exercises and demos in this course build upon each other as they prepare the system for subsequent exercises and demos. If you are taking this course as SDL with Lab on Demand, you must complete all of the exercises and demos in the order they are presented in the Training Workbook. This ensures you will achieve the expected results and a successful course outcome.

Instructor-recorded presentations and simulations (SDL only)

If you are taking this course as SDL, there may be instructor-recorded presentations and/or simulations available to assist you.

If instructor-recorded presentations are available, a hyperlink to the recording will be included on the first page of each corresponding lesson of the interactive workbook on the Training Workbook tab of the self-directed learning course.

If simulations are available, the demos and exercises throughout the interactive Training Workbook will include hyperlinks to simulations that allow you to view and/or practice the execution of the demo or exercise. These same simulations are also accessible via the Demonstrations tab of the self-directed learning course. Please note that the data used in some simulations may not exactly match the data provided in the Training Workbook.

Learning Libraries

Learning Libraries in Infor Campus include learning materials that are available to you online, anytime, anywhere. These materials can supplement instructor-led training, providing you with additional learning resources to support your day-to-day business tasks and activities.

Please note that if you accessed this Training Workbook directly via a Learning Library, you will not have access to the Infor Education Training Environment that is provided with all instructor-led and most self-directed learning course versions, as referenced above. Therefore, you will not be able to practice the exercises in the product-specific Training Environment for which the exercises in this Training Workbook were written.

Course overview

Estimated time

0.25 hours

Learning objectives

Upon completion of this course, you should be able to:

- Describe the primary financial management functions in the Financial Plan to Report business process.
- Explain the key elements on a vendor record related to accounts payable.
- Explain the vouchering process.
- Explain the invoice payment process.
- Explain the Vendor Voucher/Debit memo process.
- Explain the usefulness of the Vendor 360 form and Purchase Order Document Lifecycle form.
- Define the setup and supporting files for accounts payable.

Topics

- Course description and agenda

Course description and agenda

This course covers fundamental accounts payable concepts in the Financial Plan To Report process for the payables administrator role. This includes setting up vendors, creating and posting vouchers, paying invoices, return to debit, and an overview of accounts payable setup and supporting files.

Course duration

4.25 hours

Prerequisite courses

- SyteLine: Navigating the User Interface
- SyteLine: Foundation
- SyteLine: Using Purchase Orders and Requisitions
- SyteLine: Receiving Purchase Orders

Prerequisite knowledge

To optimize your learning experience, Infor recommends that you have the following knowledge prior to taking this course:

- Understanding of accounting basics
- Knowledge of how data is structured and organized
- Ability to navigate the user interface.

Audience

- Customer user
- Pre-sales consultant
- Business consultant
- Technical consultant
- Support
- System administrator

System requirements

- Infor SyteLine Training Environment

Reference materials

Infor SyteLine reference materials are available from the following locations:

- Infor SyteLine Help menu
- Infor Concierge®

Course agenda

The agenda below details the contents of this course, including lesson-level learning objectives and supporting objectives.

Lesson	Lesson title	Learning objectives	Estimated time (hours)
Course overview		Review course expectations.	0.25
1	Using Financial Plan To Report	Describe the primary financial management functions in the Financial Plan to Report business process. Describe the elements of the Financial Plan To Report process in the Industry Process Catalog.	0.25
2	Managing vendor records affecting accounts payable	Explain the key elements on a vendor record related to accounts payable. - Describe how to set up a vendor. - Explain how set up a vendor document profile.	0.5
3	Creating and posting vouchers	Explain the vouchering process. - Describe the different ways to generate a voucher. - Describe how to post vouchers and adjustments.	1.0
4	Paying invoices	Explain the invoice payment process. - Explain how to generate A/P payments. - Explain the process for printing and posting checks.	1.25
5	Using Return To Debit	Explain the Vendor Voucher/Debit memo process. Describe how to generate a Vendor Voucher/Debit Memo Report.	0.25
6	Exploring Vendor 360 and Purchase Order Document Lifecycle	Explain the usefulness of the Vendor 360 form and Purchase Order Document Lifecycle form. - Identify the key features of the Vendor 360 form. - Identify the key features and functionality of the Purchase Order Document Lifecycle form.	0.25

Lesson	Lesson title	Learning objectives	Estimated time (hours)
7	Setup and supporting files overview	Define the setup and supporting files for accounts payable. - Identify setup files for accounts payable. - Define supporting files that are used in accounts payable.	0.25
Course summary		Debrief course.	0.25

Appendices

This section contains information that is not part of the instructional content of this course, but it provides additional related reference information.

Appendix	Appendix title	Content description
Appendix A	Check your understanding answers	This appendix provides answers to the check your understanding questions found at the end of each lesson.
Appendix B	EFT setup and bank statement import	This appendix provides an overview of EFT setup and electronic bank statement import.

Lesson 1: Using Financial Plan To Report

Estimated time

0.25 hours

Learning objectives

After completing this lesson, you will be able to describe the primary financial management functions in the Financial Plan to Report business process. In this lesson, you will:

- Describe the elements of the Financial Plan To Report process in the Industry Process Catalog.

Topics

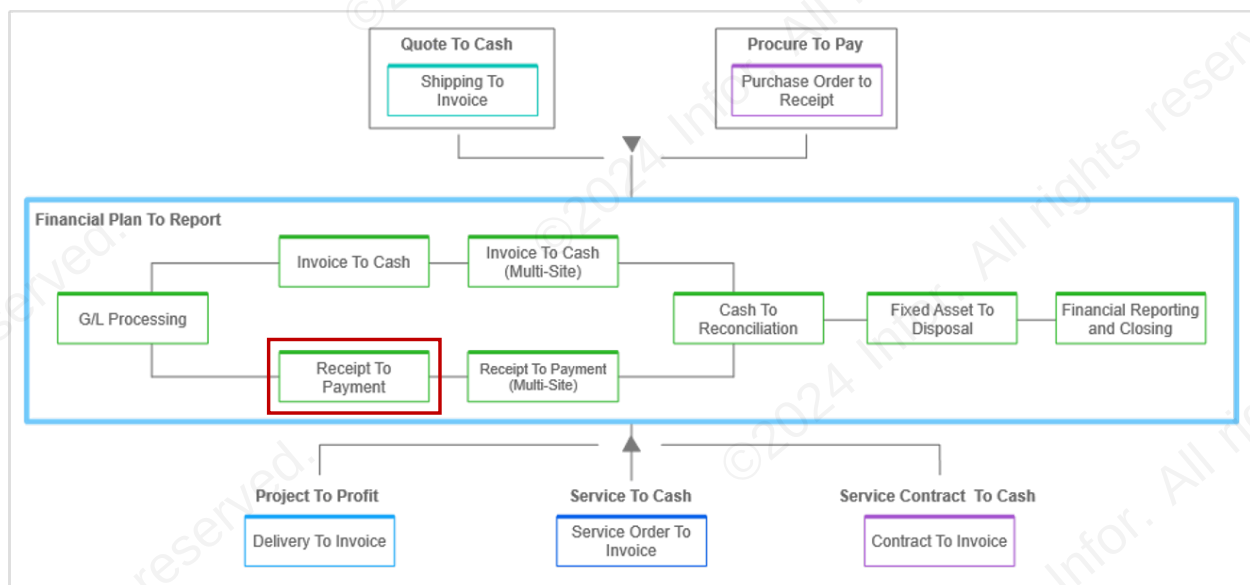

- Financial Plan To Report business process overview

Financial Plan To Report business process overview

Infor Industry Process Catalog (IPC) for CloudSuite Industrial (SyteLine) is preconfigured content targeted at your organization's industry. It provides a collection of assets including configurations, processes, and test cases, covering your organizations core needs. This content can be used to streamline the implementation process of this CloudSuite, helping you to save time and money and takes the guesswork out of deployment. The result is an affordable solution that can meet today's requirements and potential for tomorrow. It also provides the possibility for a faster ROI and time-to-benefit that is measured in weeks instead of months or years.

In this course we will refer to the IPC as business processes.

The Financial Plan To Report business process helps organization manage all their financial activities. These processes involve making journal entries, receiving customer payments, making vendor payments, bank reconciliation and financial reporting.

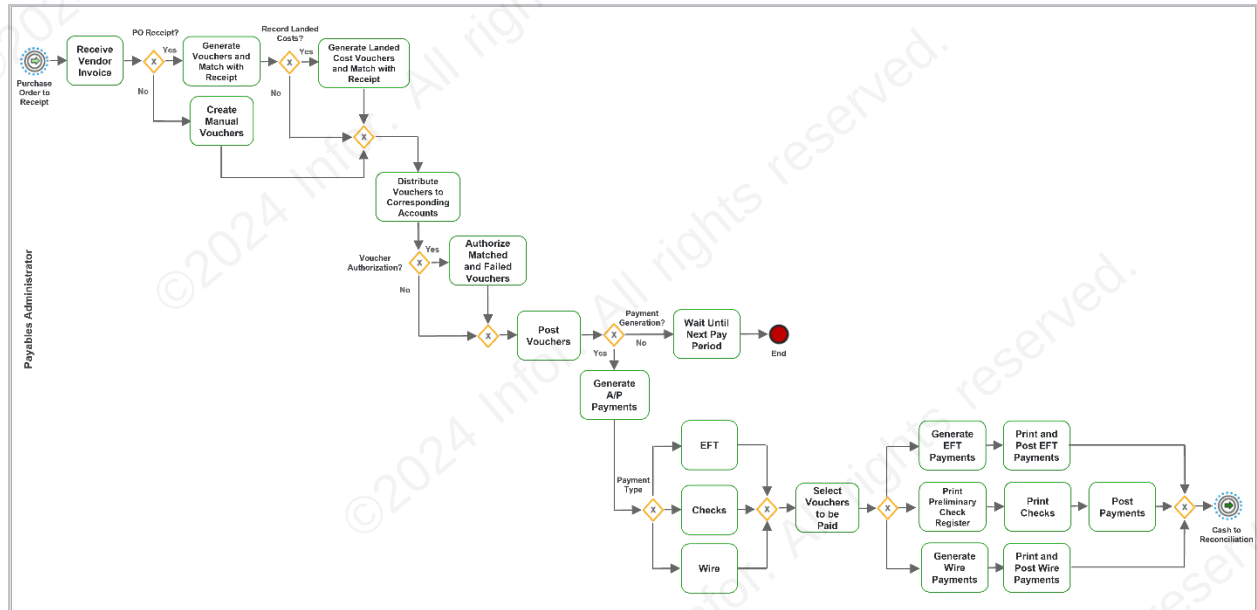

Financial Plan To Report business process diagram

This course will focus on the payables administrator role in the Receipt To Payment process within the Financial Plan To Report process.

Receipt To Payment process

The Receipt To Payment process allows companies to manage the process of processing vendor payments, including creating and posting vouchers, generating and distributing payments, and printing and posting checks.

Receipt To Payment business process diagram

Key Capabilities

The Receipt To Payment business process is supported by a variety of functions within Infor SyteLine to do the following:

- Generate vouchers from PO receipts
- Generate manual vouchers
- Generate landed cost vouchers
- Three way matching (PO Line, receipt and voucher)
- Process checks, EFT, and wire payments

Lesson 2: Managing vendor records affecting accounts payable

Estimated time

0.5 hours

Learning objectives

After completing this lesson, you will be able to explain the key elements on a vendor record related to accounts payable. In this lesson, you will:

- Describe how to set up a vendor.
- Explain how set up a vendor document profile.

Topics

- Entering vendor data
- Vendor document profile
- Vendor interactions
- Setting up an outside salesperson

Entering vendor data

All accounts payable transactions (vouchers and payments) with a vendor require that a vendor be set up. You enter data for a vendor on the Vendors form. This form allows you to maintain a record for each vendor with whom your company does business.

Vendors menu

Detail menu option

The Detail menu option allows you to enter the vendors Address information, terms, bank code, and the option to define a Remit To address.

The key drop-down lists on the **Vendors** form, **Detail** menu option, related to accounts payable, are described in the table below.

Drop-down list	Description
Terms	The code of terms for the vendor. This code specifies discount rates and due dates for invoice processing.
Bank Code	The bank code for the vendor. This code specifies the default bank account against which checks payable to this vendor are drawn.
Currency	The currency to use as you set up the vendor. This is the default currency that will be used for payment currency to the vendor. The default value is your site's domestic currency.  The Currency field cannot be changed once the vendor has been added.
Remit To Vendor	This allows you to enter a remit-to vendor number to specify that checks are to be sent to an address other than the address of the vendor shown in the header. The remit-to vendor number must be different from the current vendor number. You may want to prefix the number with "R" to indicate that the vendor is associated with another vendor (optional). Note: All other information, except bank reconciliation information, will use the main vendor's data, not the remit-to vendor.

Miscellaneous menu option

The Miscellaneous menu option allows you to enter general information about a vendor, including purchase account information and payment type data.

The key fields, drop-down lists and check boxes on the **Vendors** form, **Miscellaneous** menu option, related to accounts payable, are described in the table below.

Field/Drop-down list/ Check box	Description
Purchases	The G/L account number to use as the default account for purchases. This is used primarily for purchasing items that do not have records maintained in the Items form (for example, supplies or utilities). The system uses the purchases account you specify on the Vendors or Multi-Site Vendors form as the purchases default account. If the Purchases field on the form is blank, the system uses the account number you enter on the Accounts Payable Parameters form as the purchases default account.
Payment Type	The type of payment to be used as the default value for the vendor's accounts payable payments. Selections include: • Standard Check - a computer-generated (system-printed) check • Manual Check - a handwritten or typed check • Wire Transfer - an electronic transfer • Standard Draft - a computer-generated (system-printed) draft • Incoming Draft - a draft received from the vendor • EFT Payment - an electronic funds transfer • Cash – a cash payment
Voucher Tolerance Over % Voucher Tolerance Under %	If voucher authorization is turned on via the General tab of the Purchasing Parameters form and percentages are specified in the Voucher Tolerance Over and Voucher Tolerance Under fields, these fields will be activated on this form and a voucher will receive a status of failed if it exceeds the parameter settings.
Auto Voucher Method	This field, when used with the Auto Voucher field, determines which method of automatic vouchering is used when you receive a purchase order on the Purchase Order Receiving form. The two types are Automatic and Prompt. On the Purchase Order Receiving form, for POs that meet the criteria for automatic vouchering: • If the vendor's Auto Voucher Method field is set to Automatic, then the system automatically creates the voucher. • If the vendor's Auto Voucher Method field is set to Prompt, then the Purchase Order Receiving Auto Voucher form displays.
Auto Voucher	Use this field to specify whether the selected record will be vouchered automatically upon receiving the order. This field is used in conjunction with the Auto Voucher Method field.

A/P menu

Payment Hold menu option

The Payment Hold menu option allows you to flag a vendor and place them on hold, limiting transaction activity. When a vendor is on a payment hold, payment distribution and check printing activities are prohibited, but there are no restrictions on purchase order entry.

A problem indicator is displayed next to the field and in the header if the field is selected. A check mark is displayed in those areas if this field is cleared.

The key fields and check box on the **Vendors** form, **Payment Hold** menu option are described in the table below.

Field/Check box	Description
Payment Hold	When selected, this indicates the vendor is currently on a payment hold.
Payment Hold Reason	The reason code explaining why the vendor is on a payment hold. Text describing the reason displays to the right of the code. When the Payment Hold check box is selected, this field is required. Note: Reason codes can be managed on the Payment Hold Reasons form.
Payment Hold User	The initials of the user who last specified the payment hold automatically display in this field. User initials are set on the Users form.
Payment Hold Date	The date on which payment hold was specified automatically displays in this field.

Payment Hist menu option

The Payment Hist menu option allows you to maintain a payment history record for a vendor.

The key fields on the **Vendors** form, **Payment Hist** menu option, related to accounts payable, are described in the table below.

Field	Description
Payments Last Calendar Yr Payments Calendar YTD	The total domestic currency amount of all payments made to the vendor in the last calendar year and YTD. The field is automatically updated during year-end closing from the Payments Calendar YTD field. Note: The accounts payable year-end procedure will reset the value in the Last Yr. field to zero and move the value in the YTD field to the Last Yr. field.
1099 Payments Last Yr	The total amount of all 1099 payments made to the vendor last year and YTD.

Field	Description
1099 Payments YTD	
Payments Last Fiscal Yr Payments Fiscal YTD	The total domestic currency amount of all payments made to the vendor in the last fiscal year and fiscal YTD. The field is automatically updated during year-end closing from the Payments Fiscal YTD field.
Last Paid Date	The most recent date when the vendor was paid. The date also displays on the Payment Hold tab. The system automatically updates this field during posting of payments.

These values on the Payment Hist menu option also display on the Payment Hold menu option as read-only fields.

Contacts menu

Contacts menu option

The **Contacts** menu option allows you to enter and view information about contacts for the vendor. Selecting the Minority Owned check box allows you to indicate if a vendor is minority owned.

Minority types can be managed on the Minority Types form.

Taxes menu

Taxes menu option

The Taxes menu option allows you to enter a vendor's Federal Identification (ID) number. If the vendor has a Federal ID and payments exceed the federal minimum, a 1099 form will be printed for this vendor.

Specify the tax registration number, if any, for the tax ID. If the vendor is a corporation, a tax registration number is not required, so leave this field blank. The label of this field is user-defined on the Tax Systems form.

- For EU companies, this field can be used to specify the vendor's VAT number on the Vendors form when the system is set up for VAT.
- For US companies, the system does not generate a 1099 form for a vendor if you do not enter a federal ID in this field. The system generates 1099 forms for all vendors that have federal IDs defined and that have earned more than the minimum required by the IRS.

Exercise 2.1: Set up a vendor

In this exercise, you will enter information for a new vendor, the Ferret Bicycle Company. You will also enter information for the remit-to vendor you want to use for the Ferret Bicycle Company.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create a new vendor

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *vendors* in the **Filter** field.
3. Click the **web.Vendors** list item.
4. Click the **OK** button. The **Vendors** form opens.
5. Click the **New** icon.
6. Type *[your initials]?* in the **Vendor** field.

Vendor numbers can be alphanumeric and will use any prefix you have specified in the Vendor Prefix field on the General tab of the Accounts Payable Parameters form. Leaving this field blank allows the system to automatically generate and assign a number to the vendor. When using a question mark the system will automatically generate and assign the next number in the sequence with your initials as the prefix.

7. Type *Ferret Bicycle Company* in the **Vendor Name** field.
8. Click the **Terms** drop-down arrow.
9. Click the **2%** list item.
10. Click the **Bank Code** drop-down arrow.
11. Click the **BK1** list item.
12. Verify **USD** is selected in the **Currency** field.
13. Type *206 East Fifth Street* in the **Address [1]** field.
14. Type *Davenport* in the **City** field.
15. Click the **Prov/St Code** drop-down arrow.
16. Click the **IA** list item.
17. Type *52801* in the **Postal/ZIP** field.
18. Click the **Miscellaneous** menu option.
19. Verify **Standard Check** is selected in the **Payment Type** field.
20. Click the **Contacts** menu.
21. Click the **Contacts** menu option.

22. Type *Sharon Neff* in the **Contact** field.
23. Type *319-555-1190* in the **Phone** field.
24. Type *sneff@ferretbicycle.com* in the **External Email** field.
25. Type *Mark Martin 319-555-8611* in the **Other** field.
26. Click the **Taxes** menu.
27. Click the **Taxes** menu option.
28. Type *23-3992001* in the **Fed ID** field. If the vendor has a Federal ID and payments exceed the federal minimum, a 1099 form will be printed for this vendor.
29. Click the **Save** icon.
30. Write down your vendor number _____.

Part 2: Create a remit-to vendor

1. Click the **New** icon.
2. Click the **Vendors** menu drop-down arrow.
3. Click the **Detail** menu option.
4. Type *R-[your initials]?* in the **Vendor** field.
5. Type *Ferret Bicycle Company* in the **Vendor Name** field.
6. Click the **Terms** drop-down arrow.
7. Click the **2%** list item.
8. Click the **Bank Code** drop-down arrow.
9. Click the **BK1** list item.
10. Verify **USD** is selected in the **Currency** field.
11. Type *PO Box 723* in the **Address [1]** field.
12. Type *Orville* in the **City** field.
13. Click the **Prov/St Code** drop-down arrow.
14. Click the **OH** list item.
15. Type *44667* in the **Postal/ZIP** field.
16. Click the **Save** icon.
17. Write down your Remit To Vendor number _____.
18. Press **F7** to move to the previous record.
19. Verify the vendor number is the vendor you created in Part 1.
20. Type *r* in the **Remit To Vendor** field.
21. Click the **Remit To Vendor** drop-down arrow.
22. Click the **[your Remit To Vendor for Ferret Bicycle Company]** list item.

The address fields are automatically populated with information you just entered for the remit-to vendor.

23. Click the **Save** icon.

Leave the **Vendors** form open as you will use it in the next exercise.

Vendor document profile

The Vendor Document Profile form is used to define how to send selected report output to vendors. When generating a report for a range of vendors, each vendor's Vendor Document Profile is consulted, if a profile exists and is active, to determine how to distribute the report output.

The Vendor Document Profile form is subject to record collection caps. For example, if your collection cap is set at 100, and you attempt to send a report to 150 vendors, only the first 100 will be processed.

The key fields and drop-down lists on the **Vendor Document Profile** form are described in the table below.

Field/Drop-down list	Description
Vendor	The vendor for whom you want to create a document profile.
Method	The method used to deliver the report. Selections include: • Printer • Fax • Email
Destination	The destination where the report will be delivered. Depending on the selection from the Method drop-down list, this field displays the fax number, email address (or addresses), or printer.
Task Name	The task name options related to accounts payable include: • A/P Check Printing/Posting - Remittance Advice • A/P Draft Printing/Posting - Remittance Advice • A/P EFT Posting - Remittance Advice • A/P Wire Posting - Remittance Advice • Statement of Account Report • Vendor Voucher/Debit Memo Report

For email output to work correctly, specify the appropriate settings on the Intranets and Report Options forms.

Exercise 2.2: Add two vendor document profiles

In this exercise, you will add two vendor document profiles for Ferret Bicycle Company. The first will be for check remittance advice and the second will be for a vendor voucher debit memo report.

Before you begin:

- Ensure you are logged in to SyteLine and are on the **Vendors** form.

Exercise steps

1. Verify you are on **[your vendor number for Ferret Bicycle Company]** from the grid on the left.
2. Click the **Contacts** menu drop-down arrow.
3. Click the **Document Profile** menu option. The **Vendor Document Profile (Linked)** form opens.
4. Click the **New** icon.
5. Click the **Method** drop-down arrow.
6. Click the **Email** list item.
7. Type *sneff@ferretbicycle.com* in the **Destination** field.
8. Click the **Task Name** drop-down arrow.
9. Click the **A/P Check Printing/Posting - Remittance Advice** list item.
10. Type *Remittance Advice* in the **Description** field.
11. Type *1* in the **Copies** field.
12. Click to select the **Active** check box.
13. Click the **New** icon.
14. Click the **Method** drop-down arrow.
15. Click the **Email** list item.
16. Type *sneff@ferretbicycle.com* in the **Destination** field.
17. Click the **Task Name** drop-down arrow.
18. Click the **Vendor Voucher/Debit Memo Report** list item.
19. Type *Debit Memo* in the **Description** field.
20. Type *1* in the **Copies** field.
21. Click to select the **Active** check box.
22. Click the **Save** icon.
23. Click the **Window** drop-down arrow on the Menu bar.
24. Click the **Close All** list item.

Vendor interactions

Use the Vendor Interactions form to record and track all communication between you and your vendors, including date, time, and contact information.

Use this form to manage conversations with your vendors. For example, if a vendor promised delivery of an item on a specific date, you can enter this information on the Vendor Interactions form. The log entry allows you to determine when to initiate a follow-up. You also can track messages and information for ongoing interactions. The Interaction ID allows you to quickly find a particular interaction. You can enter multiple vendor interaction entries per vendor per day.

You can sort vendor interactions by:

- Contact date
- Follow-up date
- Entry name
- Topic

The key fields and drop-down lists on the **Vendor Interactions** form, **Detail** menu option are described in the table below.

Field/Drop-down list	Description
Vendor	The vendor for whom you want to create the interaction.
Interaction	The interaction number. Select an existing interaction number from the drop-down list or leave this field blank to have the system automatically assign an interaction number.
Description	Specify a description for the interaction.
Topic	The topic for the interaction, such as accounts payable issues or purchasing issues. These topics can act as an issues database for all purchasing or accounts payable personnel, since there can be 9999 lines of user-defined text for each vendor communication record.
Status	The status of the interaction. The options are Active and Complete.
Interaction Date	The date of the interaction. This field is automatically populated with the current system date and time by default but can be changed as necessary.
Follow-up Date	The date to follow up with the contact person. You can run the Vendor Interactions Report each day to determine the vendors that need to be contacted.

The key fields, drop-down lists, check boxes and button on the **Vendor Interactions** form, **Conversations** menu option are described in the table below.

Field/Drop-down list/ Check box/Button	Description
Contacts section	
Contact Date	Use this field to provide the date of the interaction.
Internal	Select this check box to indicate that this note is being recorded for internal use only. It will not be sent to customers or vendors or displayed on the portal.
Incoming	When this check box is selected, it signifies that the interaction is 'incoming' from the prospect, customer, sales contact, or vendor.
Reply section	
Type	Select the type of interaction. The choices are: Phone, Email, Letter, Other, and Fax.
Notes	Use this field to add notes about your interaction with the sales contact, customer, prospect or vendor.

Permissions can be set in a user's file to prevent or allow access to this file.

Setting up an outside salesperson

If a salesperson is an outside salesperson, the salesperson must be paid through accounts payable. Any salesperson paid through accounts payable must also be set up as a vendor.

On the Salespersons form, the Outside check box must be selected if the salesperson is not an employee and should be paid through accounts payable. Clearing this check box indicates the salesperson is an employee of the company and should be paid through payroll.

Check your understanding

Any salesperson paid through accounts payable must also be set up as a vendor. On the Salespersons form, what check box must be selected if the salesperson should be paid through accounts payable?

- a) Portal Reseller
- b) Outside
- c) Vendor
- d) Employee

When creating a vendor record, which of the following are key fields in order to pay the vendor?

- a) Address
- b) Bank Code
- c) Payment Type
- d) Terms

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 3: Creating and posting vouchers

Estimated time

1 hour

Learning objectives

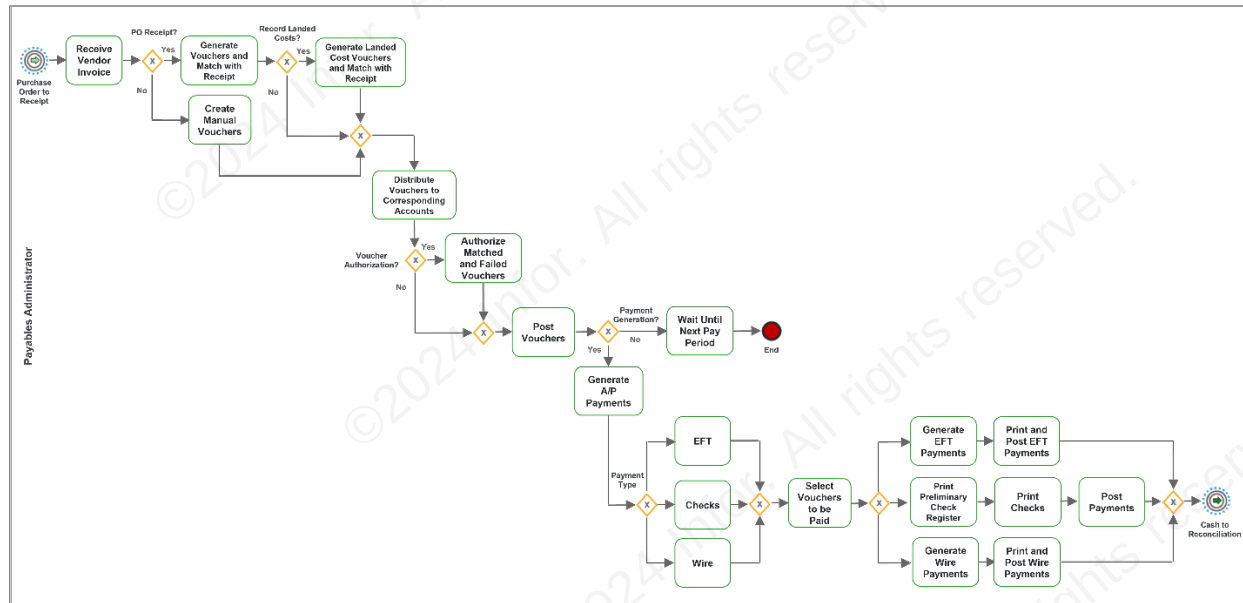

After completing this lesson, you will be able to explain the vouchering process. In this lesson, you will:

- Describe the different ways to generate a voucher.
- Describe how to post vouchers and adjustments.

Topics

- Receipt to Payment overview
- Generating vouchers
- Posting vouchers and adjustments

Receipt To Payment overview

Receipt To Payment business process diagram

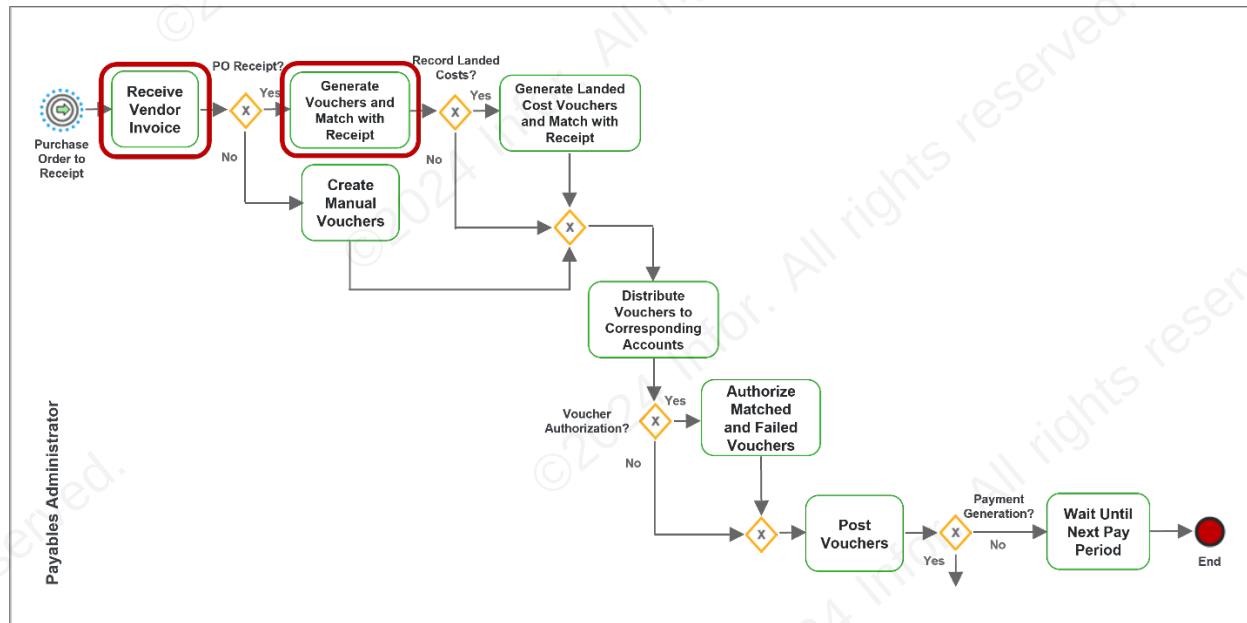

The process steps typically include the following:

- First, the receipt of the vendor invoice initiates the payment process.
- You then generate a voucher either automatically or manually.
 - Voucher duty, freight, and brokerage separately from material costs on purchase orders.
- Once the voucher is created, the voucher amount is distributed to corresponding accounts and posted.
 - If approval is required send to approver. Once approved, or if approval is not required, post the voucher.
- Payment generation can be processed immediately, or it can wait until the next scheduled pay period.
- The final step is to issue payment by printing and posting the checks.

Generating vouchers

You can generate vouchers using the following methods:

- Automatically, using the Generate A/P Transactions form or the auto voucher feature
- Manually, using the A/P Vouchers and Adjustments form
- Recurring, using the A/P Recurring Voucher Generation activity

Generate vouchers from PO receipts

Vouchers Payable Report

The Vouchers Payable report displays purchase orders that have been received, but not yet vouchered. After a purchase order is vouchered in full, it will no longer display on the report. This report can be useful in determining the invoices that are expected from each vendor.

The Vouchers Payable Report shows its data for each date a PO line item is received and displays units and amounts in the Vouchers Payable. The quantities on the report display in the unit of measure used on the PO line/release.

The voucher type shown in the report is set during processing by one of these functions:

- Generate A/P Transactions
- PO Receiving List
- Purchase Order Receiving
- Currency Revaluation Report
- Generate Landed Cost Vouchers
- Voucher Builder

If the Voucher Builder is used, you can select a site group on this form, to print only vouchers from those sites. Otherwise, the form prints only vouchers from the local site.

Note: The Vouchers Payable Report accesses the Landed Cost PO Receipt records to reconcile the received and vouchered amounts, since the landed costs are vouchered separately from the material

costs and multiple vouchers are likely to be involved. For standard cost items, the report shows the landed costs when they are received.

Note: On the Vouchers Payable Report, the Landed Cost value is zero because Landed Cost vouchering is not quantity based.

Generate A/P Transactions

When generating vouchers from purchase orders, you can automatically generate them using the Generate A/P Transactions form. This form is used to record information from a vendor's invoice for material received through purchasing. The records you work with on this form are received purchase order lines that have been processed via the Purchase Order Receiving form.

When selecting the transaction to generate, you select the purchase order number from the drop-down list, and this will automatically bring in the vendor and currency.

The value in the Material field on the top portion of the form must be equal to the value in the Total field before a voucher can be generated.

When material has been received, or returned through purchasing, you can create vouchers and adjustments on this form. After the voucher is created, it will be in the A/P Vouchers and Adjustments batch holding file until posted.

General tab

On the General tab, you can enter the vendor's invoice number in the Vendor Invoice field. This number will print on the remittance of the check. The date that displays in the Invoice Date field defaults to the current date and the terms that display in the Terms field are pulled from the vendor data that has been set up.

PO Selection tab

The PO Selection tab allows you to select the purchase orders that you want vouchered for this vendor. You can select a purchase order from the Filter by PO drop-down list and click Select to display only those purchase order lines for the selected purchase order.

The grid on the PO Selection tab contains all possible records for a vendor, including non-inventory items. In the system, the expense account entered on the PO line for a non-inventory item will now display here. Because it was expensed at the time of receipt, it cannot be updated.

If an item has a vendor contract set up, it will display in the Vendor Item field on this tab.

Additional Material Selection tab

The Additional Material Selection tab allows you to choose between generating vouchers from purchase orders, from goods receiving notes (GRNs), or from Electronic Data Interchange (EDI) invoices. When you select the Generate from PO option, you should enter the range of purchase orders in the Starting PO and Ending PO fields and the starting and ending purchase order lines/releases in the Starting Line/Release and Ending Line/Release fields. The selected purchased orders display on the bottom of the tab.

Viewing vouchers on the A/P Vouchers and Adjustments form

The A/P Vouchers and Adjustments file is a batch holding file, where vouchers and adjustments can be updated, to a limited extent, before they are posted to the journal. Vouchers and adjustments can also be deleted from this file, if they were not generated from a purchase order.

Troubleshooting difference between vendor invoice amount and received amount

If your vendor invoice is for a different amount than the purchase order receipt, perform the following:

- In the Unit Cost field enter the per unit cost from the vendor invoice for the Item. This will adjust the Total field for the purchase order receipt and should now match the vendor invoice amount for the item.
 - The variance for this will go to either Inventory Adjustment account (Actual Cost) or Purchase Cost variance account (Standard cost).

Exercise 3.1: Generate a voucher

In this exercise, you will run the vouchers payable report, then use the Generate A/P Transactions form to generate a voucher for a purchase order receipt. You will then view the transaction on the A/P Vouchers and Adjustments form.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Preview Vouchers Payable Report

1. Click the **Open** icon.
2. Type *vouchers* in the **Filter** field.
3. Click the **Vouchers Payable Report** list item.
4. Click the **OK** button. The **Vouchers Payable Report** form opens.
5. Click to select the **Show Detail** check box.
6. Click the **Preview** button. The **Vouchers Payable** report opens in a new tab.

PO DP00000060 – 4 receipts, 3 vouchers and 1 return.

PO DP 00000330 – 4 lines that have been received but not vouchered. You will be working with this purchase order to Generate A/P Transactions.
7. Click the **X** on the report tab to close.
8. Click the **X** on the **Vouchers Payable Report** form.

Part 2: Generate A/P Transactions

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
2. Type *generate* in the **Filter** field.
3. Click the **Generate A/P Transactions** list item.

4. Click the **OK** button. The **Generate A/P Transactions** form opens.
5. Type dp330 in the **PO Number** field.
6. Press **Tab**.
7. Verify the **Voucher** radio button is selected.
8. Type *[your initials]* - 1433 in the **Vendor Invoice** field.
9. Click the **PO Selection** tab. **Note:** all lines for this PO are automatically selected.

Note how many lines there are for DP00000330. If other learners have performed this exercise, there may be less than 4.

10. Click to deselect the **Selected** check box for Lines 2, 3, and 4 so that only Line 1 is selected.

Note: the amount in the **Total** value field. This is the total of the purchase order line(s) selected in the grid. You would normally verify the Total is the same as the amount on the invoice, not including taxes or miscellaneous charges.

11. Write down the value in the **Total** field _____.
12. Type *[the value from Step 12]* in the **Material** field. **Note:** This would be the material amount on the vendors invoice. A voucher will only be generated when these values are equal.
13. Click the **Generate** button. A dialog box opens with the message, "[Generate] will be performed."
14. Click the **OK** button. A dialog box opens with the message, "[Generate] was successful. Voucher is XXX."
15. Write down your voucher number _____.
16. Click the **OK** button.

The voucher is moved to the **A/P Vouchers and Adjustments** file.

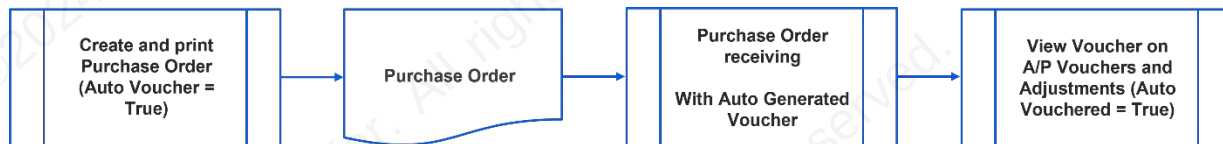

Part 3: View the voucher on A/P Vouchers and Adjustments

1. Click the **Vouchers/Adjustments** button. The **A/P Vouchers and Adjustments (Filter in Place)** form opens.
2. Click the **Filter in Place** button.
3. Locate your voucher for vendor 7.
Review the voucher information generated from the previous exercise.
4. Click the **Window** drop-down arrow.
5. Click the **Close All** list item.

Using Auto Voucher overview

In addition to automatically generating vouchers using the Generate A/P Transactions form, you can also automatically generate vouchers using the systems auto voucher feature.

The following diagram displays the auto voucher flow:

Auto voucher flow

After the voucher is created, it will be in the A/P Vouchers and Adjustments form until posted.

Vendors form

The auto voucher feature is first defined at the vendor level. On the Miscellaneous tab of the Vendors form, the following fields are used to specify auto vouchering settings for a vendor:

- **Auto Voucher** – Select this check box to indicate that the selected record is vouchered automatically upon receiving the order. This field is used in conjunction with the Auto Voucher Method field.
- **Auto Voucher Method** – This determines which method of automatic vouchering is used when you receive a purchase order on the Purchase Order Receiving form. The two types are Automatic and Prompt.

Note: When the Auto Voucher check box is selected, you must select an option from the Auto Voucher Method drop-down list.

You have an opportunity to override the option for using the auto voucher feature at the purchase order level. On the Purchase Orders form and the Purchase Orders Quick Entry form, you can accept the auto voucher settings that default from the Vendors form or change it.

Purchase Order Receiving form

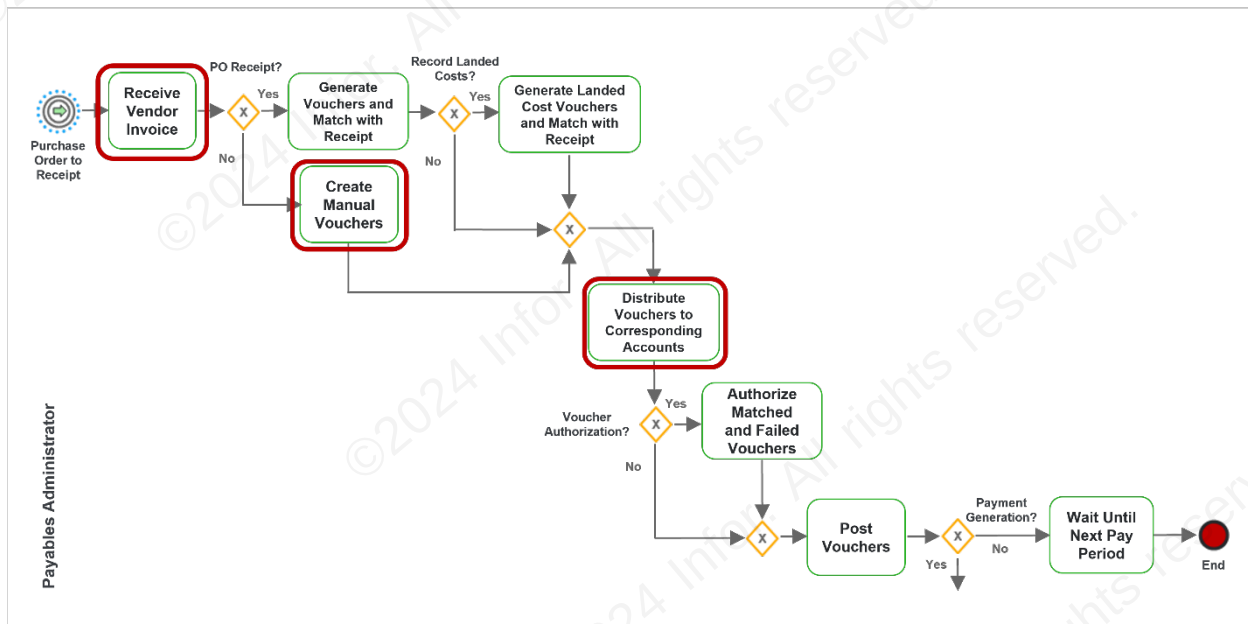

On the Purchase Order Receiving form, the voucher is either automatically generated or you are prompted to generate the voucher. This depends on your selection from the Auto Voucher Method on the Vendors form.

- If you selected the automatic auto voucher method for a vendor, the voucher is automatically generated from the Purchase Order Receiving form.
- If you selected the prompt auto voucher method for a vendor, the Purchase Order Receiving Auto Voucher (Modal) form opens when receiving purchase orders for that vendor and allows you to add the vendor invoice number, freight, and miscellaneous charges.

A/P Vouchers and adjustments form

On the A/P Vouchers and Adjustments form, a read-only Auto Vouchered field indicates whether the order was automatically vouchered during purchase order receipt.

Manual vouchers

Manual voucher process diagram

A/P Vouchers and Adjustments

If a purchase order was not generated for items/services received from a vendor, the voucher can be manually entered on the A/P Vouchers and Adjustments form. Entering the voucher on this form is, in effect, setting up a credit to accounts payable.

When working with a voucher, you can click Distribution Generation to have the system automatically distribute the voucher for you, or you can click Distribution to display another form where you can manually distribute it.

The following table displays various fields relevant to manually creating vouchers on the A/P Vouchers and Adjustments form and provides a brief description of each.

Field/Drop-down list/Check box	Description
Vendor	The number of the vendor for which you are entering the voucher, adjustment or distribution. The name of the vendor displays for reference.
Type	This field indicates the type of transaction. - Voucher - indicates that the entry is for a vendor's invoice or credit memo. - Adjustment - indicates that the entry is an adjustment to a posted transaction. When the adjustment is posted, the invoice amount of the adjustment is added to the invoice amount of the existing open voucher. All the data you enter for the adjustment replaces that for the existing open voucher, except the due date

Field/Drop-down list/Check box	Description
Cancellation	Select this check box to indicate that cancellation posting applies to the current adjustment entry. Note: The Cancellation check box can be used only when Enable Cancellation Posting is selected on the General Parameters form. On other forms, this check box is display-only. When selected, it indicates that cancellation posting applies to the current transaction.
Voucher	The voucher number. This field is automatically populated upon saving the voucher.
Distribution Date	The general ledger date.
Invoice	The vendor's invoice number. If you are trying to update an invoice number, the system checks to see if the invoice number already exists in the system. If so, a warning message displays.
Invoice Date	The invoice date. Invoices age from the vendor's invoice date.
PO	The purchase order number that authorized this purchase.
Posted from PO	This check box is automatically selected if the voucher was added as part of the posting process from the Purchasing module. If you are manually adding a voucher through the A/P Vouchers and Adjustments form, this check box is not available for selection.
Auto Vouchered	This field is read-only and indicates whether the order was automatically vouchered during purchase order receipt.
Background Post Status	This field indicates the status of a voucher, adjustment, invoice, debit, credit, or payment in regard to background posting. These are the status options: • Allow: The record can be posted during the next background run. • Hold: The record will not be posted during the next background run. • Error: An error occurred during the last background run, and the record was not posted.
Invoice Amt	The total amount to be paid to the vendor.
Non-Disc Amt	Of the total invoice amount, the portion of which a discount is not available. When the voucher is entered through the Generate A/P Transactions form, it defaults to the total of the miscellaneous charges, freight charges, and sales tax.

If the voucher authorization feature is turned on, vouchers that are manually added on this form will default to a status of Failed but can be overridden.

The Voucher Transaction Report is a useful report that displays a list of all unposted vouchers.

Voucher distribution

Use the Voucher Adjustment Distribution form to specify how to distribute transactions to multiple general ledger accounts. You can distribute to the general ledger accounts, using two methods:

- By automatically generating the distribution records. This option uses the general ledger accounts that are set up on the Accounts Payable Parameters form, the Vendors form and in the tax files.
- By manually entering the distributions.

Exercise 3.2: Manually create a voucher and automatically distribute the voucher

In this exercise, the Columbus Power Company laid new power lines for your company and sent a bill for \$1,115.00 for this one-time only job. You will manually create a voucher for the full amount and then use distribution generation to distribute the voucher.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon.
2. Type *a/p v* in the **Filter** field.
3. Click the **web.APVouchersandAdjustments** list item.
4. Click the **OK** button. The **A/P Vouchers and Adjustments** form opens.
5. Click the **New** icon.
6. Click the **Vendor** drop-down arrow.
7. Click the **20** list item.
8. Type *[your initials]-498012* in the **Invoice** field.
9. Type *1115.00* in the **Purch Amt** field.
10. Click the **Save** button. A voucher number is generated and displays in the **Voucher** field.
11. Write down your voucher number _____.

12. Click the **Distribution Generation** button. A dialog box opens with the message, “[Distribution Generation] will be performed.”
13. Click the **OK** button. A dialog box opens with the message, “1 A/P Transaction Distribution(s) were created.”
14. Click the **OK** button.
15. Click the **Distribution** menu option. The **Voucher Adjustment Distribution (Linked)** form opens.
Note: In the Allocation section, the Amount and Utilities expense account were automatically generated. The utilities account came from the **Vendors** form, **Purchases** field on the **Miscellaneous** tab.
16. Click the **Window** drop-down arrow.
17. Click the **Close All** list item.

Recurring vouchers

Why use recurring vouchers

You can create recurring vouchers for payments you make to the same vendor every month. These recurring payments include such things as rent, lease payments, and insurance.

Recurring vouchers eliminate the need to re-enter the same information each time you make a payment.

Create recurring vouchers

Using the Recurring Vouchers form, you can generate monthly vouchers for transactions in which the amount is fixed or varies but the vendor is always the same (for example, monthly loan payments, utility payments, or rent payments).

Distribute recurring vouchers

You can distribute the amount of each recurring voucher across multiple accounts in the General Ledger. You can distribute these recurring vouchers either manually or automatically:

To automatically create a voucher distribution in the Recurring Vouchers form, select the desired voucher and then select Actions > Distribution Generation.

- When you do this, the distribution uses the default purchases account from the Vendor record. If there is not a default purchases account on the Vendor record, then it uses the default purchases account from Accounts Payable Parameters.

To manually create a voucher distribution, use the Recurring Voucher Distribution form.

You only need to create the General Ledger (G/L) distributions once for each recurring voucher, unless the payment amount changes. If this amount changes, you must update the distribution record to reflect the new amount.

- Examples of these two situations are rent and utility bills. Typically, the rent amount is the same each month and so it is not necessary to distribute it each month. While a utility bill is recurring, the currency amount usually is different each month, in which case it would be necessary to redistribute it.

Note: The system saves the recurring voucher's G/L distribution records until you delete the recurring voucher.

Generate recurring vouchers

After the recurring vouchers and their distributions are set up, you use the A/P Recurring Voucher Generation utility to generate vouchers by vendor number, or by a range of vendors, for the current payment cycle. These vouchers are then copied to the A/P Vouchers and Adjustments file to be posted with the rest of the vouchers.

You should generate the recurring vouchers each month.

It is recommended that you develop procedures to prevent multiple generations for the same month.

Exercise 3.3: Generate a recurring voucher

In this exercise, you will create a recurring voucher for a monthly lease payment to Kenworth Trucks. Then you will generate the recurring voucher using the A/P Recurring Voucher Generation utility.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create a recurring voucher

1. Click the **Open** icon.
2. Type *recurring* in the **Filter** field.
3. Click the **Recurring Vouchers** list item.
4. Click the **OK** button. The **Recurring Vouchers (Filter in Place)** form opens.
5. Click the **Filter in Place** icon.
6. Click the **New** icon.
7. Click the **Vendor** drop-down arrow.
8. Click the **10** list item.
9. Type *[your initials] - Monthly Lease* in the **Invoice** field.
10. Click the **calendar** icon in the **Invoice Date** field. A calendar displays with the current month and year visible.
11. Click the **[first day of the current month]** option. The **Invoice Date** field populates.
12. Click the **calendar** icon in the **Distribution Date** field.
13. Click the **[first day of the current month]** option. The **Distribution Date** field populates.

14. Type *500.00* in the **Purch Amt** field. **Note:** this is the monthly lease payment amount.
15. Click the **calendar** icon in the **Due Date** field.
16. Click the **[first day of the current month]** option. The **Due Date** field populates.
17. Click the **Save** icon.
18. Click the **Distribution** button. The **Recurring Voucher Distribution (Linked)** form opens.
19. Type *500.00* in the **Amount** field.
20. Type *50** in the **Account** field.
21. Click the **Account** drop-down arrow.
22. Click the **50300** list item.
23. Click the **Save** icon.
24. Click the **X** on the **Recurring Voucher Distribution (Linked)** form.

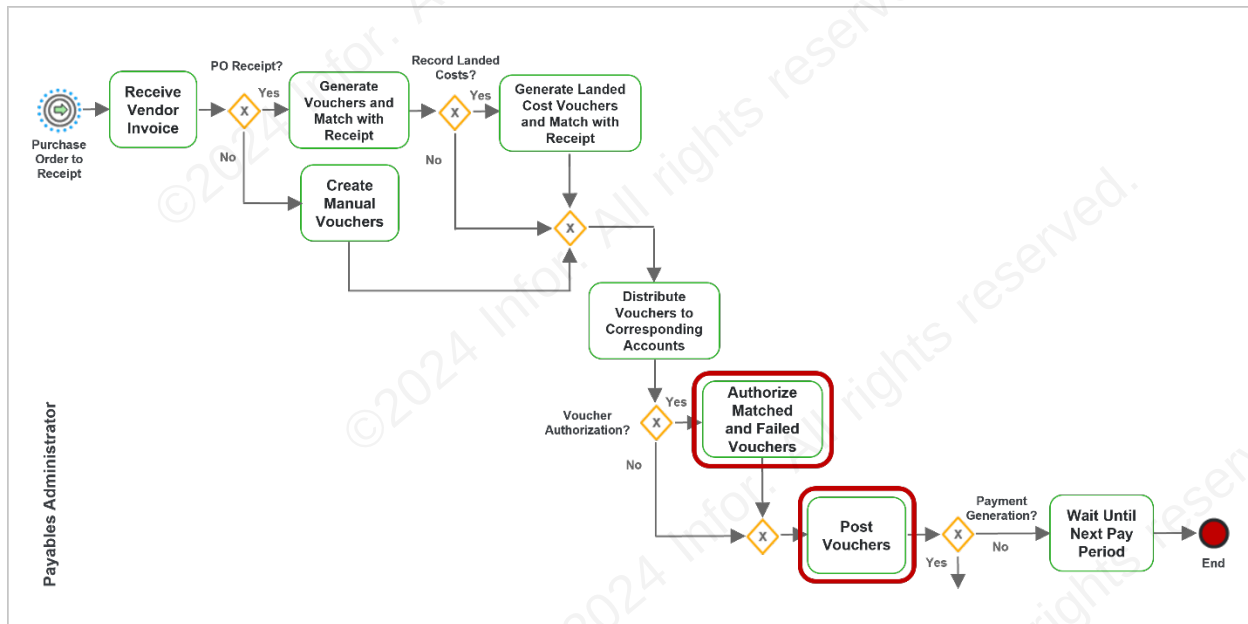

Part 2: Recurring voucher generation

1. Click the **Recurring Voucher Generation** button. The **A/P Recurring Voucher Generation** form opens.
2. Verify **10** is in the **Starting Vendor** and **Ending vendor** fields.
3. Verify **[the current month]** displays in the **New Voucher Month** field. This month displays in the **Invoice Date** field of the **A/P Vouchers and Adjustments** form.
4. Verify **[the current year]** displays in the **New Voucher Year** field. This year displays in the **Invoice Date** field of the **A/P Vouchers and Adjustments** form.
5. Click the **calendar** icon in the **Distribution Date** field.
6. Click the **[first day of the current month]** option. The **Distribution Date** field populates.
Note: The current system date will be used as the distribution date by default, but you can change it to the date you want to assign to the generated voucher.
7. Click the **Process** button. A dialog box opens with the message, "1 A/P Recurring Transaction(s) were selected."
8. Click the **OK** button.
9. Click the **X** on the **A/P Recurring Voucher Generation** form.

Part 3: Verify the voucher displays in the A/P Vouchers and Adjustments

1. Click the **Form** drop-down arrow.
2. Click the **A/P Vouchers and Adjustments** list item. The **A/P Vouchers and Adjustments** form opens.
3. Click the **Slider**.
4. Verify the recurring voucher information for Vendor 10 - Kenworth Trucks displays.
5. Click the **Window** drop-down arrow.
6. Click the **Close All** list item.

Posting vouchers and adjustments

Authorize and post vouchers flow diagram

A/P Voucher Posting

Use this form to post vouchers and adjustments to their associated posted transactions, the G/L journal, and the vendor records. You should post vouchers only after entering all on-hand transactions and their distributions.

Posting does the following:

- Updates vendor records
- Creates posted transactions
- Updates the voucher register
- Updates the G/L journal

During posting, the system performs these steps:

- Adds the invoice amount to the Purchases YTD field on the Vendors or Multi-Site Vendors form for each posted transaction. For a voucher, the Last Purchase Date field on the Vendors or Multi-Site Vendors form is updated with the distribution date, provided that the distribution date is after the Last Purchase Date.
- Creates a posted transaction record, using the transaction currency, for each voucher transaction, and updates the corresponding posted transaction record for each adjustment transaction.
- Creates a voucher register record for each transaction that is not posted from PO. For each transaction, one voucher register distribution record is created for the A/P account, and one is created for each posted distribution record.
- Creates G/L journal entries for all A/P transactions, whether generated in PO or created in A/P.

Before actually posting, you must select the Print option to print and review the **A/P Voucher Posting Report**, which lists the vouchers and adjustments that will be posted. Note: the grid at the bottom of the

form also displays the list of items that will be posted. After printing the report, you then select the Commit option to begin the posting process.

Note: If an error with the transactions is detected during posting, an error message displays, and the posting does not occur.

Post In Background Queue

You have an option to Post in Background Queue. When you select this check box, the system performs these tasks:

- Enables the Background option on the Action menu. This allows you to schedule the day and time for voucher posting in the background.
- Disables the Print and Commit fields and Process button.
- Clears and disables the Voucher, Due Date, and Distribution Date fields on the A/P Voucher Posting form.

When errors occur while running a process in the background, an email is sent to users who are subscribed to the appropriate publication on the Publication Subscribers form. For example, to receive A/P voucher posting errors, subscribe to the APVoucherPostingBackgroundError publication.

When there is a posting error, the AP Voucher Posting Background Message Report is printed to the Report Output folder, for the user who set up the Background Queue. This report is not on any report menu.

Exercise 3.4: Create, post, and adjust a voucher

In this exercise, you will create a voucher for Ferret Bicycle Company for miscellaneous bicycle magazines and then you will post all vouchers.

After posting the voucher, you realize the freight should be \$3.57, not \$35.70. You will need to create and post an adjustment to correct this error.

After both transactions have been posted, you will view the A/P Posted Transactions file for this vendor.

Before you begin:

- Ensure you have completed Exercise 2.1 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create a voucher

1. Click the **Open** icon.
2. Type *a/p v* in the **Filter** field.
3. Click the **web.APVouchersandAdjustments** list item.
4. Click the **OK** button. The **A/P Vouchers and Adjustments** form opens.
5. Click the **New** icon.
6. Type *[your initials]** in the **Vendor** field.

7. Click the **Vendor** drop-down arrow.
8. Click the **[your new vendor for Ferret Bicycle Company]** list item.
9. Verify **Voucher** displays in the **Type** field.
10. Type *[your initials]* - 43201 in the **Invoice** field.
11. Type 100.00 in the **Purch Amt** field. This is the cost for the magazines.
12. Type 35.70 in the **Freight** field.
13. Type 25.00 in the **Misc Charges** field.
14. Press **Tab**.
15. Verify **160.70** displays in the **Invoice Amt** field.
16. Click the **Save** icon. A voucher number is automatically generated and displays in the **Voucher** field.
17. Write down this voucher number _____.
18. Click the **Distribution Generation** button. A dialog box opens with the message, "[Distribution Generation] will be performed."
19. Click the **OK** button. A dialog box opens with the message, "3 A/P Transaction Distribution(s) were created."
20. Click the **OK** button.
21. Click the **Distribution** menu option. The **Voucher Adjustment Distribution (Linked)** form opens.
22. Review the automatic distribution accounts and amounts in the **Allocation** section. **Hint:** Press F8 to go to the next record.
23. Click the **X** on the **Voucher Adjustment Distribution (Linked)** form.

Part 2: Post all vouchers

1. Click the **Open** icon on the toolbar. The **Select Form** dialog box opens.
 2. Type *a/p v* in the **Filter** field.
 3. Click the **A/P Voucher Posting** list item.
 4. Click the **OK** button. The **A/P Voucher Posting** form opens.
 5. Verify the **Print** radio button is selected.
 6. Click the **Process** button. A dialog box opens with the message, "[A/P Voucher Posting] will be printed."
 7. Click the **OK** button. The **A/P Voucher Posting** report opens in a new tab.
 8. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
 9. Click the **OK** button.
- Note:** all the vouchers to be posted display in the grid below. It is possible that you may post other learners vouchers.
10. Click to select the **Commit** radio button.

Note: This option will not become enabled until you have printed the A/P Voucher Posting.

11. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
12. Click the **OK** button. A dialog box opens with the message, "XX A/P Transaction(s) were posted."
13. Click the **OK** button.
14. Click the **X** on the **A/P Voucher Posting** form. You are returned to the **A/P Vouchers and Adjustments** form.
15. Click the **Refresh** icon.

Note: any vouchers with dates outside the current year were not posted.

Part 3: Create a voucher adjustment

1. Click the **New** icon.
2. Click the **Vendor** drop-down arrow.
3. Type *[your initials]** in the **Vendor** field.
4. Click the **[your vendor number for Ferret Bicycle Company]** list item.
5. Click the **Type** drop-down arrow.
6. Click the **Adjustment** list item.
7. Click the **Voucher** drop-down arrow.
8. Click the **[default voucher]** list item.
9. Verify **[your initials] - 43201** displays in the **Invoice** field.
10. Type **-32.13** in the **Freight** field. This is the difference between \$35.70 and \$3.57.
11. Press **Tab**.
12. Verify **-32.13** displays in the **Invoice Amt** field.
13. Click the **Save** icon.
14. Click the **Distribution Generation** button. A dialog box opens with the message, "[Distribution Generation] will be performed."
15. Click the **OK** button. A dialog box opens with the message, "1 A/P Transaction Distribution(s) were created."
16. Click the **OK** button.
17. Click the **Distribution** menu option. The **Voucher Adjustment Distribution (Linked)** form opens.
18. Verify **-32.13** is displayed in the **Amount** field, found under Allocation.
19. Verify **50200** is displayed in the **Account** field.
20. Click the **X** on the **Voucher Adjustment Distribution (Linked)** form. You are returned to the **A/P Vouchers and Adjustments** form.

Part 5: Post the adjustment

1. Click the **A/P Voucher Posting** menu option. The **A/P Voucher Posting** form opens.
2. Verify **[your vendor number for Ferret Bicycle Company]** is displayed in the **Starting and Ending Vendor** field.

3. Verify **[your voucher number]** is displayed in the **Starting and Ending Voucher** field.
4. Verify the **Print** radio button is selected.
5. Click the **Process** button. A dialog box opens with the message, "[A/P Voucher Posting] will be printed."
6. Click the **OK** button. The **A/P Voucher Posting** report opens in a new tab.
7. Click the **X** on the report tab to close. A dialog box opens with the message, "Report Submitted".
8. Click the **OK** button.
9. Click to select the **Commit** radio button.
10. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
11. Click the **OK** button. A dialog box opens with the message, "1 A/P Transaction(s) were posted."
12. Click the **OK** button.
13. Click the **X** on the **A/P Voucher Posting** form. You are returned to the **A/P Vouchers and Adjustments** form.

Part 6: View the A/P posted transactions detail

1. Click the **A/P Posted Transactions Detail (Linked)** menu option. The **A/P Posted Transactions Detail (Linked)** form opens.
2. Review the original transaction data in the Amounts section.
3. Press **F8** to move to the next record.
4. Review the Freight adjustment data in the Amounts section.
5. Click the **Window** drop-down arrow in the menu bar.
6. Click the **Close All** list item.

Check your understanding

?

After a purchase order line item is vouchered in full, it will no longer display on the Vouchers Payable Report.

- a) True
- b) False

?

Which of the following methods can be used to generate vouchers?

- a) Automatic generation using the Generate A/P Transactions form
- b) Automatic generation using the auto voucher feature
- c) Manual generation using the A/P Vouchers and Adjustments form
- d) Recurring generation using the A/P Recurring Voucher Generation activity

?

On which form can vouchers be updated before they are posted to the journal?

- a) Generate A/P Transactions
- b) A/P Vouchers and Adjustments
- c) A/P Recurring Voucher Generation
- d) Purchase Order Receiving

?

If a voucher was entered manually, which of the following options will be cleared on the A/P Vouchers and Adjustments form?

- a) Auth Status
- b) Posted from PO
- c) Auto Vouchered
- d) Voucher

You can use Auto Voucher for recurring payments you make monthly.

- a) True
- b) False

Prior to posting a voucher, you must select the Print option on the form. This allows you to print and review the A/P Voucher Posting report, which lists all vouchers and adjustments that will be posted.

- a) True
- b) False

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 4: Paying invoices

Estimated time

1.25 hours

Learning objectives

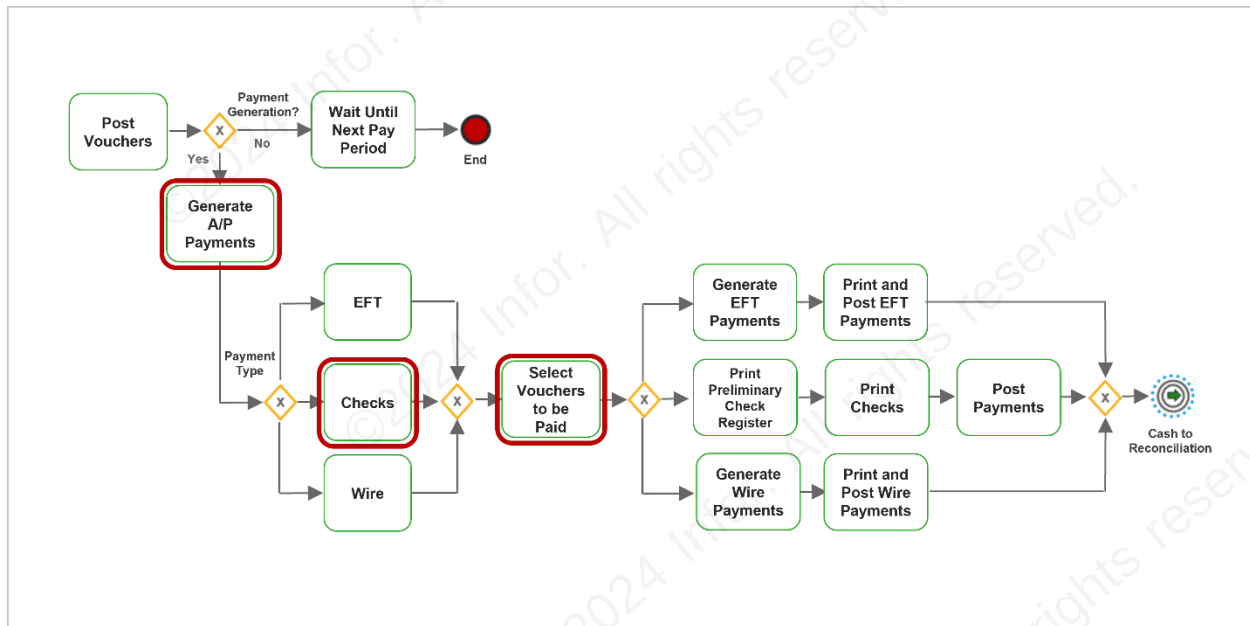

After completing this lesson, you will be able to explain the invoice payment process. In this lesson, you will:

- Explain how to generate A/P payments.
- Explain the process for printing and posting checks.

Topics

- Generating payments
- Printing, posting and voiding checks

Generating payments

Invoice payment process diagram

Payments overview

The following payment types are available:

- STD Check (standard system-printed checks)
- Manual Check (handwritten or typed checks)
- Wire (electronic transfers)
- STD Draft (standard European)
- Incoming Draft (European)
- EFT (electronic funds transfer)
- Cash (cash payment)

There are two parts to a payment:

- Payment header – The header displays information, such as vendor name and number, bank code, and payment type. It is sometimes referred to as the check or credit to cash.
- Payment distribution – The distribution displays what a check is being written for; vouchers, commissions, or non-accounts payable payments. This is sometimes referred to as the check stub or the debit to accounts payable or expenses (if non-accounts payable).

There are two ways to create a payment:

- Using the payment generation activity: The system will create payments based on the criteria entered on the A/P Payment Generation form. The header and distribution data are both created through this process.
- Manually: You can manually add the payment headers and distributions. You can use the Quick Payment Application activity to add multiple distributions, rather than manually adding each distribution one at a time. Only those vouchers with a balance due will display and can then be selected to be paid.

A/P Payment Generation

Use the A/P Payment Generation form to enter criteria for generating payment transactions. Using this form, the system automatically generates payment transactions and payment distributions. After generating payments using the A/P Payment Generation form, the payments will display on the A/P Payments form.

The key drop-down lists, check boxes, and radio buttons on the **A/P Payment Generation** form are described in the table below.

Drop-down list/ Check box/Radio button	Description
Payment Type	The type of payments to generate. Payments will be generated for those vendors who have the same payment type selected in their vendor record. Selections include: • STD Check • Manual Check • Wire • STD Draft • Incoming Draft • EFT • Cash
Aging Basis	The method to age the payments. Selections include: • Invoice • Due Date • Disc Date
Discount Method	The discount method to use. Selections include: • All (Take all discounts regardless of the date) • Early Pay (Paid by due date) • None (Take no discounts)
Payment Date	The date vouchers will be paid. This date is also the date used to age vouchers.
Include Commissions Due	Select this check box to process commissions for outside salespersons whose reference numbers are also valid vendor numbers. The system summarizes the total commission due amount into the check total for each vendor. To exclude commissions, clear this check box.
Delete Payment / Distributions	Select this check box if you want to delete all current payments and their distributions. Do not select this check box if you want to preserve the existing payments and their distributions.

Drop-down list/ Check box/Radio button	Description
	 If standard checks are being generated and some existing payments have been entered, the existing payments are affected by the check generation process. It is strongly suggested that you post the existing payments prior to generating new payments.
Starting Bank Code Ending Bank Code	The range of bank codes for which to produce payments.
Starting Vendor Ending Vendor	The range of vendors for which to produce payments.
Starting Age Date Ending Age Date	The first and last aging dates of the transactions you want to consider for payment.  The age ending date is the due date of transactions you want to include.

When using Early Pay discounts, the A/P Payment Generation must be performed twice. Once to include discounts and once by due date and not including discounts.

The following is a high-level overview of how to perform A/P Payment Generation when you want to include discounts to take.

Payment generation 1 – including discounts

- Begin by selecting the Payment Type for this generation. Typically, this is performed for a check run.
- Then, select Disc Date for the aging basis and Early Pay for the Discount method.
- Select the Payment Date. (This could be the date you want on the checks.)
- Select the Bank Code.
- In the Age Date Ending field you can specify a date in the future, which will include payments due up to that date.
- Process the payment generation selections

Payment generation 2 – by due date and no discounts

- Select Due Date for the aging basis and None for the Discount method.
- Process the payment generation changes

Quick payment application

Use the A/P Quick Payment Application form to quickly enter and distribute payments to vendors. You can enter a new payment on this form or select an existing one.

The form displays all vouchers and any existing payment distributions for the selected vendor. From here, you can select individual vouchers, select all vouchers, deselect vouchers, and update the amount paid on this form. Using this form facilitates entering payment distributions when there are several vouchers to be paid with one payment.

The 1099 Reportable check box indicates if a vendor payment distribution is taxable and should be included on the vendor's 1099 form. The option is selected by default when a distribution is created if the vendor has a Federal Tax ID number. You can clear this option for payments that should not be reported on the 1099 form.

Exercise 4.1: Generate payments

In this exercise, you will generate payments using the A/P Payment Generation form. You will view the automatic payment generation of Ferret Bicycle Company using the Quick button. You do not want to pay vendors for vouchers that you did not create, so you will remove those records. You should only have 4 records remaining (Vendor 7, 10, 20, and [your initials]00000X Ferret Bicycle Company).

Before you begin:

- Ensure you have completed Exercises 3.1 to 3.4 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Perform A/P payment generation to include discount

1. Click the **Open** icon.
2. Type *a/p pay* in the **Filter** field.
3. Click the **A/P Payment Generation** list item.
4. Click the **OK** button. The **A/P Payment Generation** form opens.
5. Click to clear the **Wire** check box.
6. Click to clear the **STD Draft** check box.
7. Click to clear the **Incoming Draft** check box.
8. Click to clear the **EFT** check box.
9. Click to clear the **Cash** check box.
10. Click to select the **Disc Date** radio button under the **Aging Basis** section.
11. Verify the **Early Pay** radio button is selected under **Discount Method** section.
12. Verify the **[current date]** is selected in the **Payment Date** field. **Note:** you can select the date to be used for the payments.

13. Click the **Bank Code** drop-down arrow.
14. Click the **BK1** list item.
15. Click the **calendar** icon in the **Age Date Starting** field. A calendar displays with the current month and year visible.
16. Click the **[date two weeks prior to today's date]** option. The **Age Starting Date** field populates. This will ensure you only generate payments for vouchers created in the past two weeks. Normally you would leave this field blank.
17. Click the **calendar** icon in the **Age Date Ending** field. A calendar displays with the current month and year visible.
18. Click the **[date three weeks after today's date]** option. The **Age Ending Date** field populates.

You select a date depending how far forward you want to take advantage of early pay discounts and invoices that fall within the ending date. This can be dependent on how often you do check runs.

19. Click the **Process** button. A dialog box opens with the message, "X A/P Payment Distribution(s) were created. X A/P Payment(s) were created."
20. Click the **OK** button.

Note: The system has generated a message regarding Vendor 8 being on payment hold.

Part 2: Perform A/P payment generation based on due date and not including discounts

1. Click to select the **Due Date** radio button under the **Aging Basis** section.
2. Click to select the **None** radio button under the **Discount Method** section.
Leave all other fields with the selections made in Part 1.
3. Click the **Process** button. A dialog box opens with the message, "X A/P Payment Distribution(s) were created. X A/P Payment(s) were created."
4. Click the **OK** button.

Part 3: Use the Payment button to view an automatic payment generation

1. Click the **Payments** button. The **A/P Payments (Filter in Place)** form opens.
2. Click the **Filter in Place** icon.
3. Click the **[your vendor number for the Ferret Bicycle Company]** from the grid on the left. The payment information for that vendor displays. The Amount and Applied values are the same and there should be no value in the Remaining field.
4. Click the **Quick** button. The **A/P Quick Payment Application (Linked)** form opens.
Note: This form shows how the payment was automatically generated.
5. Click the **X** on the **A/P Quick Payment Application (Linked)** form and you are returned to the **A/P Payments** form.

Part 4: Remove all payments for all other vendors

1. Press **Ctrl** and select all the lines for vendors you will not be paying. **Note:** you should only have lines remaining for Vendor 7, 10, 20, and [your initials]00000X Ferret Bicycle Company.

2. Click the **Delete** icon. A dialog box opens with the message, "Selected records will be permanently deleted upon Save."
3. Click the **OK** button.
4. Click the **Save** icon.
5. Leave this form open for the next exercise.

Manually entering payments

A/P Payments form

After generating payments using the A/P Payment Generation form, the payments display on the A/P Payments form, where they can be updated or deleted, as necessary.

Payments can also be manually entered on this form all payment types.

Note: If a payment is deleted on this form, a check will not print.

Distributing payments

Use the A/P Payment Distributions form to enter vouchers, non-accounts payable payments, commission payments, and prepayments.

On this form, the Type field displays the type of payment distribution, which can be any of the following:

Voucher:

- Is applied against a particular voucher.

Non-A/P:

- Is not applied against an existing A/P record. This payment type is used when you issue a check that's not related to A/P. The Vch/Seq value is used as a sequence number for non-A/P payments and will default to the next available sequence. When posted, the cash account is credited, and the account specified in the Deposit Acct field is debited.

Commission:

- Is applied against a commission due to an outside salesperson with a reference number that's the same as the vendor number on the check. The Invoice field must contain an invoice number from the customer order with an unpaid commission due to the vendor.

Open:

- Can be tied/untied to/from a posted voucher. If an open payment has a PO associated with it, the open payment will be recorded on the PO from the value entered in the PO field on the A/P Payment Distributions form. The prepaid amount will be reduced when the open payment is tied to a posted voucher. If an open payment has no PO associated with it, the open payment should be matched with a voucher that will be posted and entered at a later time.

Note: When adding multiple AP payment distributions, you can specify only one Open type distribution per site for each Open type payment.

There is also a 1099 Reportable check box on this form. This check box indicates if a vendor payment distribution is taxable and should be included on the vendor's 1099 form. This check box is selected by default when a distribution is created if the vendor has a federal tax identification number. You can clear this option for payments that should not be reported on the 1099 form.

The amount that displays in the Amount field can be changed before printing checks.

The amount in the Applied field must equal the check amount or the check will not be posted.

Creating open payments

To make a prepayment (deposit) to a vendor, on the A/P Payments form, select the Vendor, Payment Type, and Check date. Then on the Payment Distributions form, select Open from the Type drop-down list. then on the Accounts tab you enter the prepayment amount.

- The payment can be associated with a purchase order and assigned a deposit account to which it will be posted. The payment will update the Prepaid field on the purchase order.

System impact: open payments

To view open payments:

- Purchase Orders form – Prepaid field on the Amounts menu
- Accounts Payable Aging Report – Open payment

Exercise 4.2: Create two open payments

In this exercise, you will create two Open payments and apply one payment to purchase order DP00000329.

Before you begin:

- Ensure you are logged in to SyteLine and are on the **A/P Payments** form.

Exercise steps

Part 1: Create two open payments

1. Click the **New** icon.
2. Click the **Vendor** drop-down arrow.
3. Click the **6** list item.
4. Verify **Standard Check** displays in the **Payment Type** field.
5. Verify the **[current date]** is displayed in the **Check Date** field.
6. Verify **BK1** displays in the **Bank Code** field.
7. Click the **Save** icon.
8. Click the **Distributions** button. The **A/P Payment Distributions (Linked)** form opens.
9. Click the **Type** drop-down arrow.
10. Click the **Open** list item.

11. Click the **PO** drop-down arrow.
12. Click the **DP00000329** list item.
13. Click the **Accounts** tab.
14. Type *1000* in the **Amount Paid** field.
Note: The GL account is 11600 - AP Deposit.
15. Click the **Save** icon.
16. Click the **X** on the **A/P Payment Distributions (Linked)** form. You are returned to the **A/P Payments** form.
17. Click the **New** icon.
18. Type *6* in the **Vendor** field.
19. Verify **Standard Check** displays in the **Payment Type** field.
20. Click the **calendar** icon in the **Check Date** field. A calendar displays with the current month and year visible.
21. Click the **[current date]** option. The **Check Date** field populates.
22. Verify **BK1** displays in the **Bank Code** field.
23. Click the **Save** icon.
24. Click the **Distributions** button. The **A/P Payment Distributions (Linked)** form opens.
25. Click the **Type** drop-down arrow.
26. Click the **Open** list item.
27. Click the **Accounts** tab.
28. Type *1000* in the **Amount Paid** field.
Note: The GL account is 11600 - AP Deposit.
29. Click the **Save** icon.

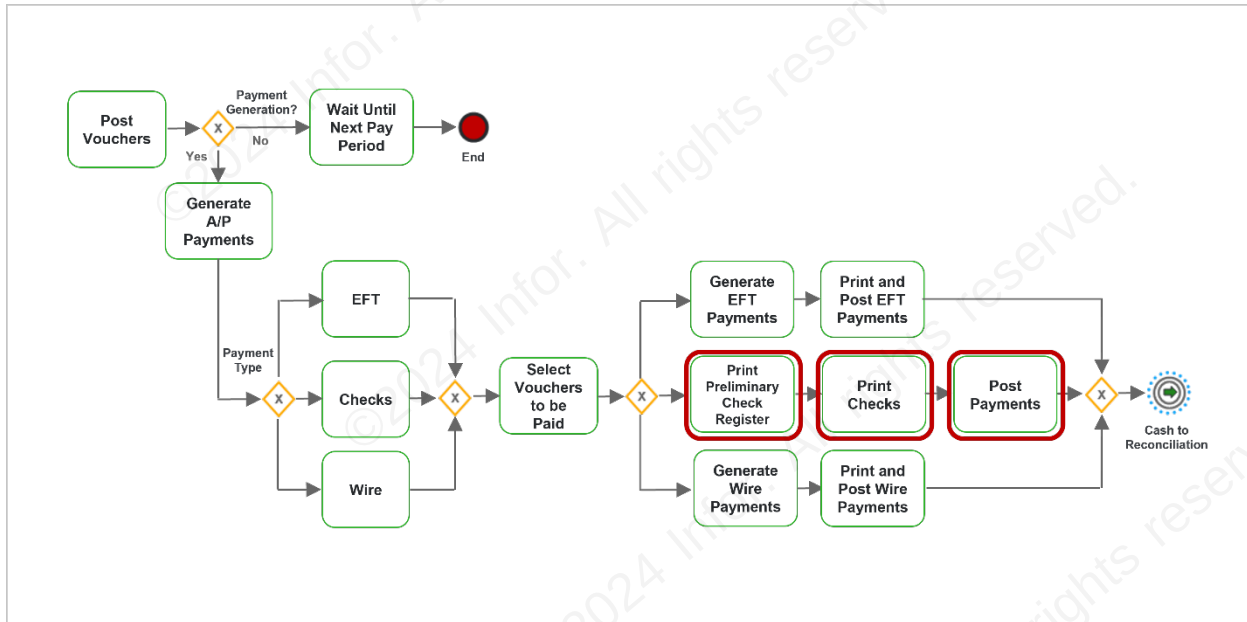

You should now have 5 payments listed (Two for Vendor 6, and one each for Vendors 10, 20, and [your initials]00000X Ferret Bicycle Company).

Part 2: View prepaid amount on purchase order

1. Click the **Open** icon.
2. Type *purchase orders* in the **Filter** field.
3. Click the **web.PurchaseOrders** list item.
4. Click the **OK** button. The **Purchase Orders** form opens.
5. Click the **Filter in Place** icon.
6. Type *dp329* in the **PO** field.
7. Click the **Filter in Place** icon.
8. Click the **Amounts** menu option.
9. Verify 1,000.00 displays in the **Prepaid Amount** field.
10. Click the **Window** drop-down arrow in the menu bar.

11. Click the **Close All** list item.

Printing and posting and checks

Printing and posting checks

A/P Check Printing/Posting

Use this form to:

- Print a preliminary check register
- Print A/P checks
- Void checks
- Print A/P check stubs
- Print a final register and post checks
- Print remittance advice

Checks may be printed and sorted for a range of vendors by name or number. The starting check number can be changed, and the system prompts you to void any skipped checks in a sequence of numbers.

Manual checks will not be printed; however, you must still print the final register and complete the posting process.

Preliminary Check Register

Sets up a preliminary check register. If no checks need to be printed, a message to that effect displays. When you select this option, the system validates the check information, prints the register, and then returns you to the A/P Check Printing/Posting form so that you can continue with or exit from the process.

You must print the preliminary register before you can print the checks.

Print A/P Checks

Prints the A/P checks from the preliminary register.

Void Check(s)

Activates the options in the To Void group box so that you can void checks and then post them. Use this option if your checks printed incorrectly or were damaged. When you choose this option, the To Void group box is updated with information about the checks that are to be voided. When prompted, click OK to void the listed checks.

Print A/P Check Stubs

(Optional) Reprints the APCheckLaserStubs, APCheckSTD006Stubs, or APCheckANZStubs report for the checks in the collection, but leaves the check portion at the bottom blank. This option can only be selected after a Print A/P Checks or Void Checks option has been performed. Once the Final Register and Post has been performed, check stubs can no longer be printed.

Check stubs print only for standard checks. Manual checks do not print checks; therefore, they do not print check stubs.

Final Register and Post

Prints a check register, posts the checks to the A/P Distribution Journal, creates posted transactions, and updates the vendor records. General Ledger journal records are created for the payment records, and the posted transaction vouchers are created for the amount paid and discount taken.

Print Remittance Advice

If the Manual option for Remittance Advice is selected on the Accounts Payable Parameters form, you must also select this option. To have the remittance advice statement processed for print, fax, or email on a vendor-by-vendor basis, also select the Use Profile check box. If you select this option but no manual checks exist in the check batch, the remittance advice will be blank.

If you exit from this form after printing or voiding checks but without running the Final Register and Post option, the system will void any records that are not already voided, and then automatically run the Final Register And Post option.

Note:

When you print and post checks, three fields on the Vendors form are updated for the vendor:

- Last Paid Date: Date of the last posted payment for that vendor
- Discounts YTD: YTD amount of a discount taken for a voucher for a vendor
- Payments YTD: YTD payments made to the vendor in the current year

Exercise 4.3: Print and post checks

In this exercise, you will use the A/P Check Printing/Posting form to print and post checks for your vouchers.

Before you begin:

- Ensure you have completed Exercise 4.1 and 4.2 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Perform A/P Check printing/posting

1. Click the **Open** icon.
2. Type *a/p check* in the **Filter** field.
3. Click the **A/P Check Printing/Posting** list item.
4. Click the **OK** button. The **A/P Check Printing/Posting** form opens.
5. Verify **BK1** is selected in the **Bank Code** field.

Note: You should verify the Starting Check Number matches the number of the check in your printer.

6. Click the **Form Type** drop-down arrow.
7. Click the **3-Part Laser** list item.
8. Click the **Calendar** icon in the **Starting Pay Date** field.
9. Click the **[today's date]** option. **Note:** If you have performed the previous exercises over several days, you will need to select an earlier Starting Pay Date.
10. The **Pay Date Ending** field populates.
11. Verify the **Preliminary Check Register** radio button is selected.
12. Click the **Process** button. A dialog box opens with the message, "5 A/P Payment(s) were processed. [Preliminary Check Register Report] will be performed."
13. Click the **OK** button. The **Preliminary Check Register Report** opens in a new tab.
14. Click the **X** on the report tab to close.

Note: The preliminary checks to be printed are displayed in the grid.

15. Click to select the **Print A/P Checks** radio button.
16. Click the **Process** button. The **APChecks3PartLaser** report opens in a new tab and displays all the printed checks.

Review the checks for payment amounts and discounts taken.

17. Click the **X** on the report tab to close. A dialog box opens with the message, "5 Check(s) were processed. 0 Continuation(s) were processed."
18. Click the **OK** button.
19. Click to select the **Final Register And Post** radio button.

20. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
21. Click the **OK** button. The **A/P Final Check Register Report** opens in a new tab.
22. Click the **X** on the report tab to close. A dialog box opens with the message, "[A/P Payment] was successful. 5 A/P Payment(s) were posted."
23. Click the **OK** button.
24. Click the **X** on the **A/P Check Printing/Posting** form.

Part 2: View payment transactions on Bank Reconciliations form

1. Click the **Open** icon.
2. Type *bank rec* in the **Filter** field.
3. Click the **web.BankCodes** list item.
4. Click the **OK** button. The **Bank Reconciliations** form opens.
5. Press **F8** to move to the next record.
Note: the checks you just printed display in the grid.
6. Write down the Transaction numbers for your open payments _____. (The transaction numbers are the check number) You will need these numbers for the next exercise.
7. Click the **X** on the **Bank Reconciliations** form.

Reapplying open payments

When the open payment is ready to be applied to a posted voucher, do the following:

You would begin by selecting the Vendor and the Reapplication check box on the A/P Payments form, then you would add the payment record using the original check number (this number can be found in the A/P Posted Transactions Detail file.) and then you would distribute the payment. The final step is to post the reapplication by proceeding with the normal check printing/posting process.

The system will assign the original check date as a default. You should update this date to today's date so the reapplication is posted in the current period and not the original check date period.

The default value in the G/L Reference field for a reapplication is APPR num (where 'num' is the vendor number). The **G/L Reference** value for a reapplication **must begin with APPR**. Otherwise, the reapplication does not occur and you cannot delete or update the record.

System impact: reapplied open payments

To view reapplied open payments:

- Accounts Payable Aging Report

Exercise 4.4: Reapply open payments

In this exercise, you will reapply your open payments to the vendor invoice/voucher.

Before you begin:

- Ensure you have completed Exercise 4.2 and 4.3 because it provides data or configurations for this exercise.
- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Create first reapplication payment

1. Click the **Open** icon.
2. Type *a/p pay* in the **Filter** field.
3. Click the **A/P Payments** list item.
4. Click the **OK** button. The **A/P Payments** form opens.
5. Click the **New** icon.
6. Type **6** in the **Vendor** field.
7. Press **Tab**.
8. Verify **Standard Check** displays in the **Payment Type** field. Note: Do not update the payment type as it is not relevant to the reapplication.
9. Click to select the **Reapplication** check box. The **Check Number** field becomes enabled.
Note: The **Reference** field updates to display **APPR 6**. This means this is an AP payment reapplication and the number is the vendor number.
10. Type *[your first open payment check number]* in the **Check Number** field.
11. Press **Tab**.
Note: the Amount field displays 1,000.00 and the Applied and Remaining fields display 0.00.
12. Click the **calendar** icon in the **Check Date** field. A calendar displays with the current month and year visible.
13. Click the **[current date]** option. The **Check Date** field populates.

SyteLine will assign the original check date as a default. You should update this date to today's date, so the reapplication is posted in the current period and not the original check date period.

14. Verify **BK1** displays in the **Bank Code** field.
15. Click the **Save** icon.

Part 2: Use quick payment method

1. Click the **Quick** button. The **A/P Quick Payment Application (Linked)** form opens.

Note: the Remaining field displays 1,000.00

2. Click to select the **Selected** check box for the line that displays Voucher as the Type and has a PO reference.
3. Type *1000* in the **Amt To Pay** field, in the grid.
4. Press **Tab**.
5. Verify the Applied field displays 1,000.00 and the Remaining field displays 0.00.
6. Click the **Apply** button. A dialog box opens with the message, "0 A/P Payment Distributions(s) were changed. 1 A/P Payment Distributions(s) were created. 0 A/P Payment Distributions(s) were deleted."
7. Click the **OK** button.
8. Click the **X** on the **A/P Quick Payment Application (Linked)** form. You are returned to the **A/P Payments** form.

Part 3: Create second reapplication payment

1. Click the **New** icon.
2. Type *6* in the **Vendor** field.
3. Press **Tab**.
4. Verify **Standard Check** displays in the **Payment Type** field. Note: Do not update the payment type as it does not pertain to the reapplication.
5. Click to select the **Reapplication** check box. The **Check Number** field becomes enabled.
6. Type *[your second open payment check number]* in the **Check Number** field.
7. Press **Tab**.
Note: the Amount field displays 1,000.00 and the Applied and Remaining fields display 0.00.
8. Click the **calendar** icon in the **Check Date** field. A calendar displays with the current month and year visible.
9. Click the **[current date]** option. The **Check Date** field populates.
10. Verify **BK1** displays in the **Bank Code** field.
11. Click the **Save** icon.

Part 4: Use distribution payment method

1. Click the **Distributions** button. The **A/P Payment Distributions (Linked)** form opens.
Note: the Remaining field displays 1,000.00
2. Verify **Voucher** is selected in the **Type** field.
3. Click the **Vch/Seq** drop-down arrow.
4. Click the **[voucher you will apply the payment to]** list item. This voucher should have the largest value.
5. Click the **Accounts** menu option.
6. Type *1000* in the **Amount Paid** field.
7. Press **Tab**.
8. Click the **Save** icon.

9. Verify the **Applied** field displays 1,000.00 and the **Remaining** field displays 0.00.
10. Click the **X** on the **A/P Payment Distributions (Linked)** form. You are returned to the **A/P Payments** form.

Part 5: Post the reapplication

1. Click the **Check Printing** menu option. The **A/P Check Printing/Posting** form opens.
2. Type 6 in the **Starting Vendor** field.
3. Press **Tab**. The **Ending Vendor** field populates.
4. Click the **Final Register And Post** radio button.
5. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
6. Click the **OK** button. The **A/P Final Check Register** report opens in a new tab.
7. Review the report.
8. Click the **X** on the report tab. A dialog box opens with the message, "[A/P Payment] was successful. 1 A/P Payment(s) were posted."
9. Click the **OK** button.
10. Click the **Window** drop-down arrow.
11. Click the **Close All** list item.

Part 6: View result on Accounts Payable Aging Report

1. Click the **Open** icon.
2. Type *accounts pay* in the **Filter** field.
3. Click the **Accounts Payable Aging Report** list item.
4. Click the **OK** button. The **Accounts Payable Aging Report** form opens.
5. Type 6 in the **Starting Vendor** field.
6. Press **Tab**.
7. Click to select the **Print All Posted Transactions** check box. The **Print Open Payments** check box is automatically selected.
8. Click the **Preview** button. The **Accounts Payable Aging Report** opens in a new tab.
9. Verify the open payments now display as a payment against the original voucher.
10. Click the **X** on the **Accounts Payable Aging Report** tab.
11. Click the **X** on the **Accounts Payable Aging Report** form.

Void posted payments

Use the Void A/P Posted Payments utility to void previously posted checks, wire, or EFT payments. This utility also reverses bank reconciliations and writes reversing accounts payable journal entries for all currency gains and loss distributions that were created when the payment you are voiding was originally posted. A report is generated from this utility.

AR/AP Payment Offset

AR/AP payment offset can be used when you have a customer that you sell to and the customer is also a vendor that you buy goods or services from and instead of the customer sending you payment and you sending them payment you can use the payment offset and the remaining invoices or vouchers will determine whether the customer owes you money or you owe the vendor money.

This feature allows you to have a batch of selected AR invoices and AP vouchers offset each other. This can be done only if you have a customer that is also a vendor.

The functionality involves these forms:

- Accounts Payable Parameters – create an offset account
- Vendors - link a customer to a vendor with the Customer field on the Vendors form
- AR/AP Payment Offset – create offsetting payments for A/R invoices and A/P vouchers

View payments as offset with the Offset check box on these forms:

- A/R Payments
- A/R Payment Distributions
- A/P Payments
- A/P Payment Distributions

Use this form to create offsetting payments for AR and AP. When you select a vendor or customer, the outstanding vouchers and invoices are displayed. Only transactions created in the vendor and customer account currencies, which must be the same, are displayed. You can then enter offsetting amounts for the various vouchers and invoices. Once balanced, offsetting payment and distribution records are created. These payments can then be posted through the standard AR and AP posting routines.

Viewing posted transactions

Use the A/P Posted Transactions Summary form to view summary information about a particular vendor's posted transactions, including vouchers, adjustments, and payments. The aging buckets are displayed in the top part of the form and in the grid in the lower half of the form, the transactions are sorted by voucher number in descending order.

Use the A/P Posted Transactions Detail form to view detailed information about vendors posted transactions. This information is obtained from the posted vouchers and payments.

In the grid on the left side of the form, the transactions are sorted by vendor, and then by voucher number in descending order.

The 1099 Reportable check box indicates if a vendor payment distribution is taxable and should be included on the vendor's 1099 form. The option is selected by default when a distribution is created if the vendor has a Federal Tax ID number. You can clear this option for payments that should not be reported on the 1099 form.

Posting A/P Wire Transactions

Use the A/P Wire Posting form.

Begin by specifying a range of vendors, pay dates, names, the type of payment and the bank code. You then Process to print and review the report. The grid will also display the list of items that will be posted. You then select Final Register And Post and Process. If you have selected the Wire Remittance Advice option on the Accounts Payable Parameters form, you have the option of printing the remittance advice for output by printer, fax or email.

Reversing a posted wire payment

Note: If the voucher for the wire payment is generated but not processed, delete the wire payment record in the A/P Payments form instead of reversing it.

To reverse a wire payment:

Use the A/P Payments form and specify the following information:

- Vendor - specify the vendor number whose wire payment you want to void.
- Bank code - specify the bank code to which the original check was issued.
- Payment Type - specify Wire Transfer.
- Check Number - accept the default value. This value must be unique.
- Amount - specify the negative amount that corresponds to the wire amount to be voided. For example, to void a payment of \$250.00, specify -250.00.

Distribute the reversal amount the same as the original payment.

Go to the A/P Wire Posting form to post the wire transfer reversal.

During the posting process, the system marks the corresponding bank reconciliation as Voided.

Check your understanding

?

Which of the following payment types are available for check printing and posting?

- a) STD Check
- b) Wire
- c) Manual Check
- d) STD Draft
- e) EFT

?

The distribution portion of a payment displays what a check is being written for; vouchers, commissions, or non-accounts payable payments. This is sometimes referred to as which of the following?

- a) Check stub
- b) Payment header
- c) Check
- d) Credit to cash

?

If a payment is deleted on the A/P Payments form, a check will still print.

- a) True
- b) False

?

To make a prepayment (deposit) to a vendor, what option should be selected from the Type drop-down list on the Payment Distributions form?

- a) Voucher
- b) Non-A/P
- c) Commission
- d) Open

Which of the following are optional steps in the check printing/posting process?

- a) Printing the preliminary check register
- b) Printing accounts payable checks
- c) Voiding checks
- d) Printing accounts payable check stubs
- e) Printing a final check register and post checks

You use the Void A/P Posted Payments utility to void previously posted checks. This utility also reverses bank reconciliations and writes reversing accounts payable journal entries.

- a) True
- b) False

A/P Payment generation is the only method of processing payments?

- a) True
- b) False

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 5: Using Return To Debit

Estimated time

.25 hours

Learning objectives

After completing this lesson, you will be able to explain the Vendor Voucher/Debit memo process. In this lesson, you will:

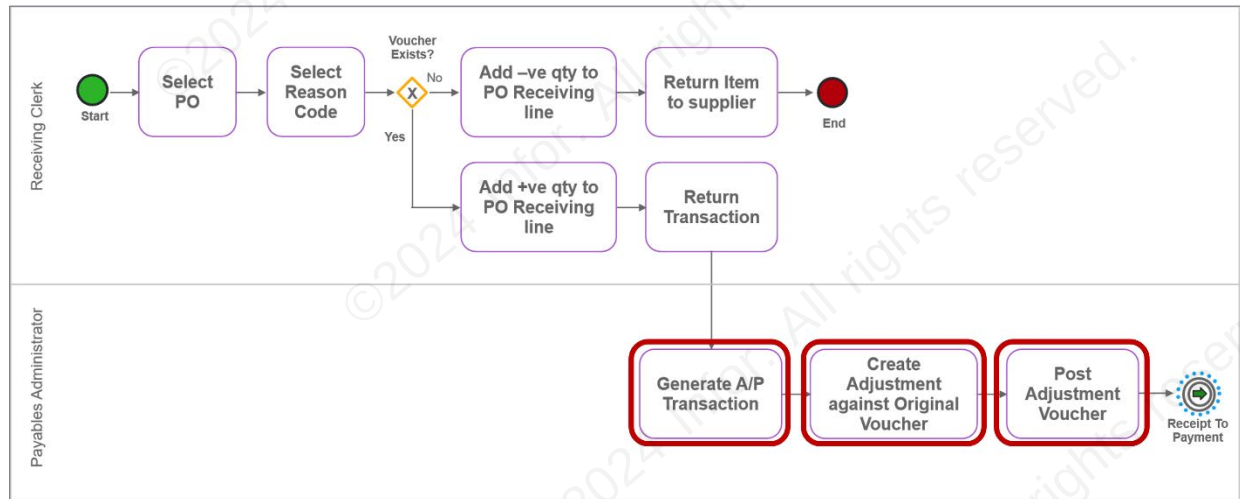

- Describe how to generate a Vendor Voucher/Debit Memo Report.

Topics

- Return To Debit process
- Generate a Vendor Voucher/Debit Memo Report

Return To Debit process

The Return To Debit process begins with the receiving clerk performing the return transaction on the purchase order line. The payables administrator then generates the A/P transaction to create an adjustment against the original voucher and posts the transaction.

Purchase order return after vouchering process diagram

Vendor Voucher/Debit Memo Report

The Vendor Voucher/Debit Memo Report is used to create a report that details credit memo amounts applied to originating vendor invoices and purchase orders. The transaction currency for each voucher/debit memo is displayed. This report is suited for delivery to vendors by use of the Vendor Document Profile form.

Exercise 5.1: Generate a return A/P transaction, post and generate Vendor Voucher/Debit Memo Report

In this exercise, you will generate a return A/P transaction and post, and then you will generate the Vendor Voucher/Debit Memo Report.

In order to perform this process, you will first need to perform a return transaction on purchase order DP329 Line 1. (This purchase order line has already been vouchered) This would normally be performed by the receiving clerk.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

Part 1: Perform a return transaction

1. Click the **Open** icon.
2. Type *purchase order receiving* in the **Filter** field.

3. Click the **Purchase Order Receiving** list item.
4. Click the **OK** button. The **Purchase Order Receiving** form opens.
5. Type *dp329* in the **PO Number** field.
6. Press **Tab**. A dialog box opens with the message, "Not one PO Line exists." This is because the purchase order lines have been received.

Note: If other learners have performed this exercise, the dialog box will not display and there will be a line or lines with a Qty of 1 to be received.
7. Click the **OK** button.
8. Click the **PO Line/Release Status** drop-down arrow.
9. Click the **Filled** list item. The grid updates to display the fully received line(s).
10. Click to select the **Select** check box for the first line.
11. Click to select the **DR Return** check box for the line item. **Note:** you are able to select the check box. This means that the PO line has been vouchered and you must do a positive return.
12. Type *1.00* in the **Receive Qty** field.
13. Press **Tab**.
14. Click in the **Reason Code** field.
15. Click the **Reason Code** drop-down arrow.
16. Click the **PVQ** list item.
17. Click the **Receive** button. A dialog box opens with the message, "1 Pending PO Receiving Transaction(s) were posted."
18. Click the **OK** button.
19. Click the **X** on the **Purchase Order Receiving** form.

Part 2: Generate a return A/P transaction

1. Click the **Open** icon.
2. Type *generate a* in the **Filter** field.
3. Click the **Generate A/P Transactions** form list item.
4. Click the **OK** button. The **Generate A/P Transactions** form opens.
5. Type *dp329* in the **PO Number** field.
6. Click to select the **Adjustment** radio button. A dialog box opens with the message, "All selection information will be reset".
7. Click the **OK** button.
8. Click the **Voucher** drop-down arrow.
9. Click the **456** list item.
10. Verify *F36902* displays in the **Vendor Invoice** field.
11. Click the **PO Selection** tab.
12. Click to select the **Select** check box for the line item.

13. Write down the amount in the **Total** field _____.
14. Type *[the amount from Step 13]* in the **Material** field. This is the amount for the one returned fuel tank.
15. Press **Tab**. The **Total** field value for the invoice populates.
16. Click the **Generate** button. A dialog box opens with the message, "[Generate] will be performed."
17. Click the **OK** button. A dialog box opens with the message, "[Generate] was successful. Voucher is XXX."
18. Click the **OK** button.
19. Click the **X** on the **Generate A/P Transactions** form.

Part 3: Post the return voucher

1. Click the **Open** icon.
2. Type *a/p vouchers* in the **Filter** field.
3. Click the **web.APVouchersandAdjustments** form list item.
4. Click the **OK** button. The **A/P Vouchers and Adjustments** form opens.
5. Verify *[your adjustment voucher]* is displayed.
6. Click the **A/P Voucher Posting** menu option. The **A/P Voucher Posting** form opens with the vendor and voucher number displayed.
7. Verify the **Print** radio button is selected.
8. Click the **Process** button. A dialog box opens with the message, "[A/P Voucher Posting] will be printed."
9. Click the **OK** button. The **A/P Voucher Posting Report** opens in a new tab.
Review the report.
10. Click the **X** on the report tab. A dialog box opens with the message, "Report Submitted".
11. Click the **OK** button.
12. Click to select the **Commit** radio button.
13. Click the **Process** button. A dialog box opens with the message, "[Post] will be performed."
14. Click the **OK** button. A dialog box opens with the message, "1 A/P Transaction(s) were posted."
15. Click the **OK** button.
16. Click the **Window** drop-down arrow.
17. Click the **Close All** list item.

Part 4: Generate the Vendor Voucher/Debit Memo Report

1. Click the **Open** icon.
2. Type *vendor voucher* in the **Filter** field.
3. Click the **Vendor Voucher/Debit Memo Report** form list item.
4. Click the **OK** button. The **Vendor Voucher/Debit Memo Report** form opens.
5. Type **6** in the **Vendor Starting** field.

6. Press **Tab**.
7. Verify **6** displays in the **Vendor Ending** field.
8. Click the **Print** button. The **Vendor Voucher/Debit Memo Report** opens in a new tab.
Review the report.
9. Click the **X** on the report tab. A dialog box opens with the message, "Report Submitted".
10. Click the **OK** button.
11. Click the **X** on the **Vendor Voucher/Debit Memo Report** form.

Check your understanding

What report can be used to inform a vendor that you are returning an item and includes the credit memo amounts applied to the original vendor invoices and purchase orders?

- a) Change Order Report
- b) Purchase Requirements Report
- c) Vendor Voucher/Debit Memo Report
- d) Vouchers Payable

Refer to [Appendix B](#) for answers to the check your understanding questions.

Lesson 6: Exploring Vendor 360 and Purchase Order Document Lifecycle

Estimated time

0.25 hours

Learning objectives

After completing this lesson, you will be able to explain the usefulness of the Vendor 360 form and Purchase Order Document Lifecycle form. In this lesson, you will:

- Identify the key features of the Vendor 360 form.
- Identify the key features and functionality of the Purchase Order Document Lifecycle form.

Topics

- Vendor 360 form
- Purchase Order Document Lifecycle form

Vendor 360 form

The Vendor 360 form shows key information about vendors. This information is consolidated from various forms in the Vendor module and is read only. The three main areas of the form are Company, Financials, and Purchases.

Heading	Additional Information
Company	Overview Details Interactions Notes/Documents
Financials	Remit To Payment Information A/P Posted Transaction Summary
Purchases	Purchase Orders PO Requisition Lines Contracts On Time Delivery

Exercise 6.1: Navigate the Vendor 360 form

In this exercise, you will navigate the Vendor 360 form.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon.
2. Type *vendor 360* in the **Filter** field.
3. Click the **Vendor 360** list item.
4. Click the **OK** button. The **Vendor 360** form opens.
5. Type *cromax* in the **Find other vendor** field.
6. Click the **Find other vendor** drop-down arrow.
7. Click the **Cromax Metals** list item.
8. Click the **Financials** drop-down arrow.

Review the information on the Payment Information tab and the A/P Posted Transaction Summary tab.

9. Click the **X** on the **Vendor 360** form.

Purchase Order Document Lifecycle form

The Purchase Order Document Lifecycle form is used to enhance the visibility of the lifecycle of a purchase order. The form can be opened standalone or by clicking the Purchase Order Document Lifecycle icon in the toolbar on one of these forms:

- Purchase Order Requisitions
- Purchase Orders
- Purchase Order Receipts
- Voucher Listing
- A/P Posted Transactions Detail

When you use the toolbar option the Purchase Order Document Lifecycle form opens displaying only information for that specific record.

Header fields

The header fields allow you to populate the Purchase Order Document Lifecycle form by choosing a specific requisition, purchase order, or voucher.

Grids

Information related to the purchase order, requisition or voucher number selected in the header fields displays in five grids:

Grid	Description
Requisitions	This grid displays the requisition number, PO number, vendor code, cost, status, and requisition date
Purchase Orders	This grid displays the PO number, vendor code, status, order date, cost, contact and type
Receipts	This grid displays the PO number, vendor code, received date, quantity received, and quantity returned
Vouchers	This grid displays the voucher number, PO number, vendor code, cost, invoice amount, invoice date, and distribution date
Payments	This grid displays the voucher number, PO number, vendor code, payment date, payment amount, and check number

To drill into details on any of the grids, right-click the item you want to view and select Details from the drop-down menu. The related form displays.

Navigation tree

The navigation tree displays a graphical summary of the data displayed in the grids. Double-clicking an item in the tree updates the header fields to reflect the selection and filter the grid information to display only information related to that particular item.

Exercise 6.2: Explore the Purchase Order Document Lifecycle form

In this exercise, you will access the Purchase Order Document Lifecycle form and drill into details.

Before you begin:

- Ensure you are logged in to SyteLine.

Exercise steps

1. Click the **Open** icon.
2. Type *purchase order doc* in the **Filter** field.
3. Click the **Purchase Order Document Lifecycle** form list item.
4. Click the **OK** button. The **Purchase Order Document Lifecycle** form opens.
5. Type *dp329* in the **Purchase Order** field.

Review the information in the Vouchers and Payments sections on the form. These relate to accounts payable.

6. Click the **X** on the **Purchase Order Document Lifecycle** form.

Lesson 7: Setup and supporting files overview

Estimated time

0.25 hours

Learning objectives

After completing this lesson, you will be able to define the setup and supporting files for accounts payable. In this lesson, you will:

- Identify setup files for accounts payable.
- Define supporting files that are used in accounts payable.

Topics

- Setup files
- Supporting files

Setup files overview

Why setup is important

The forms in this lesson are important to make sure the correct general ledger accounts are used, the correct bank codes are entered, and the correct billing terms are setup. Most of these things are set up after installation but before the accounts payable module is activated. It is important to make sure the back-end files are accurate, so the system runs smoothly once you are live.

Various parameters and settings applicable to accounts payable (A/P) processing are established in several different files.

In this lesson, you will learn about the A/P-related files that are used to create and maintain these settings and parameters. These files include the following:

- Accounts Payable Parameters
- Chart of Accounts
- Purchasing Parameters
- Product Codes
- Bank Codes
- Billing Terms

An account tracks the money spent or earned by business activities such as:

- Paying bills
- Generating payroll checks
- Purchasing supplies
- Paying rent

The system uses default accounts for specific types of transactions. Account numbers to use for transactions are often automatically assigned from code and parameters forms.

Customer order and purchase order lines use account numbers defined on the Product Codes form. An item is assigned a product code, and each product code has account numbers associated with it. When an item is sold, it is entered on a customer order line item. When the voucher is entered, the system credits the inventory account (taken from the product code) with the proper amount.

Accounts Payable Parameters

Use this form to specify the accounts to use in the General Ledger. The system uses these accounts throughout A/P for distributions to the G/L. This form also lets you specify A/P Electronic Funds Transfer (EFT) information and default information to use as needed for vendor records that are system-generated from the Vendor Portal.

General tab

Vendor Prefix

You can enter the default prefix to be used for vendor numbers.

For example, if you enter VN in the Vendor Prefix field, the default vendor numbers used at this site will be VN00001, VN00002, VN00003, etc. If you do not enter a value in the Vendor Prefix field, the default vendor numbers used at this site will be 1, 2, 3, etc.

Aging Basis

Select one of the following options for aging the transactions:

- Invoice Date - age open item amounts by voucher invoice date.
- Due Date - age open item amounts by voucher due date.
- Discount Date - age open item amounts by voucher discount date.

Set aging parameters

You set aging parameters to be used as the default day range and titles on the Accounts Payable Aging Report. Negative numbers represent days until due (the voucher will be due in the future). Positive numbers represent days past due. The Aging Report can be based on invoice date, due date, or discount date.

Only the Accounts Payable Aging Report uses these aging report parameters.

Remittance Advice

Select the following if a remittance advice document is to be printed when this type of payment is processed:

- Wire - standard wire payment
- EFT - EFT wire payment
- Manual - manual check or cash
- Draft - incoming draft (Remittance Advice is currently not available for standard drafts)

The **Vendor** and **Salesperson** sections are related to the Vendor Portal.

Accounts tab

Set default accounts for system-generated distributions

The system uses default accounts for specific types of transactions. Account numbers are often automatically assigned from code and parameters forms. The Accounts tab of the Accounts Payable Parameters form allows you to specify the default accounts to use for system-generated distributions.

Note: You can update an account on an accounts payable form even when a parameter is set.

The key drop-down lists on the **Accounts Payable Parameters** form, **Accounts** tab are described in the table below.

Drop-down list	Description
Accounts Payable	The G/L account number designated as the default account for accounts payable.
Purchases	The G/L account number designated as the default account for purchases. This is used primarily for purchasing items that do not have records maintained in the Items form (for example, supplies). Valid account numbers are maintained in the Chart of Accounts form.

Drop-down list	Description
	The system uses the purchases account you specify on the Vendors or Multi-Site Vendors form as the purchases default account. If the Purchases field on the form is blank, the system uses the account number you enter on the Accounts Payable Parameters form as the purchases default account.
Misc. Charges	The G/L account number designated as the default account for miscellaneous purchase charges.
Sales Tax Expense	The G/L account number designated as the default account for sales tax expense. Note: This field is updateable only when there is at least one tax system setup where the Active for Purchasing check box is set to no.
Discount	The G/L account number designated as the default account for purchase discounts.
External Purchases	The G/L account number designated as the default account used for purchase order requisitions generated by an external system. On the Purchase Order Requisition Lines form, this account number displays for non-inventory items on the imported purchase order requisition.

Landed Cost Accounts tab

Define the default account for each type of landed cost.

Misc tab

The key drop-down lists on the **Accounts Payable Parameters** form, **Misc** tab are described in the table below.

Drop-down list/ Check box	Description
Commissions Paid	The default Commissions Paid Expense account number. This is used by the A/P Check Generation function when Commission Due records from Customer Order Entry are collected. It may be changed to another account through the A/P Check Distribution form after generation.
Deposit Acct	The default Deposit account number you want to appear on the A/P Payment Distribution form. This number is overwritten at the A/P Payment Distribution form.

Drop-down list/ Check box	Description
Drafts Payable	The G/L account number designated as the default draft account.
Offset	The default account to be used for offsetting AP and AR transactions. This account is used by default on the AR/AP Payment Offset form. On the A/R Payments, A/R Payment Distributions, A/P Payments, and A/P Payment Distributions forms, this field is a read-only check box. It indicates whether the payment is an offset payment, generated from the AR/AP Payment Offset form. If a payment record that is set as offset is deleted, then all AR payment, AR payment distribution, AP payment, and AP payment distribution records for the vendor/customer are deleted to ensure the offset amounts remain balanced. Note: Offset payment distributions cannot be deleted using the A/R Payment Distributions or A/P Payment Distributions form; however, these distributions are deleted when payments are posted or if you manually delete the payments using the A/R Payments or A/P Payments form. On the AR/AP Payment Offset form, this field appears in two places; once in each grid. The field displays the amount that can be offset either for the voucher or the invoice, depending on the grid.

Expense Reimbursement tab

Process External Expense Report in A/P

Select the Process External Expense Report in A/P check box to use the A/P system to process expense reports that are sent to SyteLine as BODs from another application. Otherwise, external expense reports are processed through the payroll system.

Report Templates tab

Specify Laser, Moore ANZ, STD-006, or 3-Part Laser as the default check form type value for the A/P Check Printing/Posting activity.

Purchasing Parameters

General tab

Voucher Authorization

Use this utility to control which vouchers you post to A/P. This utility enables you to quickly authorize a selected group of vouchers. The status of the designated vouchers is changed to Authorized.

You activate this utility by selecting the Voucher Authorization check box on the Purchasing Parameters form. After you activate this utility, A/P does not post a voucher from Purchasing to A/P until certain criteria are met.

Note:

- Vouchers created from POs will have a status of Matched.
- The system assigns an authorization status of Failed to all unmatched, unposted vouchers, such as manual vouchers. Failed vouchers must have a status of Authorized before they can be posted.
- You can manually change the status of an individual voucher on the A/P Vouchers and Adjustments form.
- Every time you modify a field on the voucher, or if you attempt to change the status of a voucher, the system informs you that the authorization status will be changed to Failed.

If the Voucher Authorization feature is not activated, voucher posting in the system remains unchanged.

Voucher Tolerance Over/Under %

When voucher authorization is activated, you can set voucher tolerance over and under percentages. This allows you to specify a percentage which the voucher amount can be over or under the unit price and still be considered matched.

Voucher Authorization Report

This report lists unposted vouchers for a range of authorizers, vouchers, invoice dates, vendors, vendor names, purchase orders, and goods receiving notes. You can sort it by purchase order, voucher, or vendor name.

You can elect to include purchase orders/lines/releases, goods receiving notes, and voucher totals. You can also issue a blank page between each authorizer.

This report is useful for reviewing distributions prior to authorization and posting.

Accounts tab

Use the Accounts tab on the Purchasing Parameters form to define standard accounts for vouchers payable, freight payable, duty payable, brokerage payable, and other accounts.

The Vouchers Payable account is a temporary liability account used to track amounts received, but not yet vouchered. The account is credited for the material cost when goods are received and debited for the material cost when the vendor's invoice is vouchered and posted in accounts payable.

The Freight Payable, Duty Payable, and Brokerage Payable accounts are temporary liability accounts to use when duties, freight, and brokerage fees are incurred. The accounts are credited when goods are received and debited when the vendor's invoice is vouchered and posted in accounts payable.

Product Codes

Use the Product Codes form to set up inventory adjustment and variance accounts for accounts payable.

The system uses the inventory adjustment account number for purchase order receiving transactions. The variance accounts are the accounts to which you want to assign variance expenses for a group of items identified by a product code.

Misc menu option

This is where you assign costs for inventory adjustments for a group of items identified by a product code. When there is a difference in the cost of the items received into inventory and the invoice/voucher cost, the difference is accounted for when the total quantity of the line item has been vouchered.

When voucher authorization is activated, the voucher that is created will have a status of failed.

The following is an example of entries used with actual costing.

Actual costing: Inventory Adjustment account

Type of entry	Account	Debit	Credit
PO receipt	Inventory	12.00	
	Vouchers Payable		12.00
Voucher matching	Vouchers Payable	10.00	
	Accounts Payable		10.00
Variance	Vouchers Payable	2.00	
	Inventory Adjustment		2.00

Variance menu option

This is where you assign purchase cost variance expenses for a group of items identified by a product code. When voucher authorization is activated, the voucher that is created will have a status of failed. If there is a cost difference for a non-inventory item, the difference goes back to the expense account on the purchase order.

The following is an example of entries used with standard costing.

Standard costing: Purchase Cost variance account

Type of entry	Account	Debit	Credit
PO receipt	Inventory	12.00	
	Vouchers Payable		12.00
Voucher matching	Vouchers Payable	10.00	
	Accounts Payable		10.00

Type of entry	Account	Debit	Credit
Variance	Vouchers Payable	2.00	
	Purchase Price Variance		2.00

Supporting files overview

Bank codes

The system maintains a transaction history of all activity against the bank checking accounts your company uses. You can view this information on the Bank Reconciliations form, and also prepare bank reconciliations by tracking what has been recorded by the bank.

Checks printed through payroll and accounts payable are automatically recorded, along with checks that have been voided due to a reprint, enabling you to view and reconcile each check.

Bank codes are defined for each bank your company does business with. Each bank code requires a general ledger account number. Several bank codes may use the same general ledger cash account.

Each vendor requires a bank code.

You must add one Check Type record for each bank code that checks are to be printed from. The check number should be one number lower than the first check number to be printed. The system then assigns check numbers for computer-printed checks based on the last check printed.

Billing Terms

Use this form to identify and maintain billing terms to be applied to customers and vendors. The billing terms code displays on the Vendors form (and their multi-site equivalents). You can identify default billing terms for each vendor. The billing terms (sometimes called the Terms Code) determine the following:

- **Due Days:** The date an invoice is due to be paid by the customer or vendor.
- **Discount Days:** The number of days a customer or vendor has to receive a discount.
- **Discount Percent:** The percentage of discount the customer or vendor is to receive.

For each customer or vendor, you can enter a Billing Terms code to use as a default when entering invoices. You must set up each code in the Billing Terms form before you can apply it to a customer or vendor.

Determining due days

The following methods can be used to set the invoice due date:

- Due Days
- Prox Due Day
- Advanced Terms (using a combination of Due Days and Prox Due Day)
 - The Advanced Terms check box must be selected to use this option
- Multiple due dates (using Due Days or Prox Due Day)
 - The Use Multiple Due Dates check box must be selected to use this option

Unless you are using advanced terms, you cannot use the Due Days and Prox Due Day fields at the same time. If you are not using advanced terms and the values in the Due Days and Prox Due Day fields are greater than zero, the system will ignore due days.

Determining discount days

The following methods can be used to set discounts:

- Discount days
- Prox Discount Day

You cannot use discounts and multiple due dates. When you select the Use Multiple Due Dates check box, all discount fields will be set to zero and deactivated.

Check your understanding

If you enter a prefix of VN in the Vendor Prefix field on the General tab of the Accounts Payable Parameters form, how will the default vendor numbers be generated?

- a) 00001VN, 00002VN, 00003VN, and so on
- b) VN00001, VN00002, VN00003, and so on
- c) 0000VN1, 0000VN2, 0000VN3, and so on
- d) VN1, VN2, VN3, and so on

Which of the following billing term items are used to calculate?

- a) Discount Percent
- b) Due Days
- c) Cutoff Day
- d) Discount Days

Which temporary liability account is used to track purchase order quantities and amounts received, but not yet vouchered?

- a) Freight Payable
- b) Accounts Payable
- c) Vouchers Payable
- d) Brokerage Payable

On which form do you enable the voucher authorization feature?

- a) Product Codes
- b) Vendors
- c) Purchasing Parameters
- d) Accounts Payable Parameters

Refer to [Appendix B](#) for answers to the check your understanding questions.

Course summary

Estimated time

0.25 hours

Learning objectives

Now that you have completed this course, you should be able to:

- Describe the primary financial management functions in the Financial Plan to Report business process.
- Explain the key elements on a vendor record related to accounts payable.
- Explain the vouchering process.
- Explain the invoice payment process.
- Explain the Vendor Voucher/Debit memo process.
- Explain the usefulness of the Vendor 360 form and Purchase Order Document Lifecycle form.
- Define the setup and supporting files for accounts payable.

Topics

- Course review

Course review

The _____ must contain all accounts payable-related account numbers before transaction distributions and postings can occur.

- a) Accounts payable parameters
- b) Chart of Accounts
- c) Billing terms
- d) Bank codes

When a vendor is on a payment hold, all transactions are prohibited.

- a) True
- b) False

If a purchase order was not generated for items/services received from a vendor, the voucher can be manually entered on which one of the following forms?

- a) A/P Vouchers and Adjustments
- b) Generate A/P Transactions
- c) Voucher Adjustment Distribution
- d) Recurring Vouchers

You use Distribution Generation when you want to automatically distribute a voucher. Which two of the following forms does the system use to assign the G/L account number for the distribution.

- a) Accounts Payable Parameters
- b) Distribution
- c) A/P Voucher Posting
- d) Vendors

Refer to [Appendix B](#) for answers to the check your understanding questions.

Appendices

The following are included in this section:

- Appendix A: Check your understanding (CYU) answers
- Appendix B: EFT setup and bank statement import

Appendix A: Check your understanding answers

This section provides the answers to the questions found at the end of each lesson.

Lesson 2: Adding vendors

Any salesperson paid through accounts payable must also be set up as a vendor. On the Salespersons form, what check box must be selected if the salesperson should be paid through accounts payable?

- a) Portal Reseller
- b) Outside
- c) Vendor
- d) Employee

When creating a vendor record, which of the following are key fields in order to pay the vendor?

- a) Address
- b) Bank Code
- c) Payment Type
- d) Terms

Lesson 3: Creating and posting vouchers

After a purchase order line item is vouchered in full, it will no longer display on the Vouchers Payable Report.

- a) True
- b) False

Which of the following methods can be used to generate vouchers?

- a) Automatic generation using the Generate A/P Transactions form
- b) Automatic generation using the auto voucher feature
- c) Manual generation using the A/P Vouchers and Adjustments form

d) Recurring generation using the A/P Recurring Voucher Generation activity

?

On which form can vouchers be updated before they are posted to the journal?

- a) Generate A/P Transactions
- b) A/P Vouchers and Adjustments
- c) A/P Recurring Voucher Generation
- d) Purchase Order Receiving

?

If a voucher was entered manually, which of the following options will be cleared on the A/P Vouchers and Adjustments form?

- a) Auth Status
- b) Posted from PO
- c) Auto Vouchered
- d) Voucher

?

You can use Auto Voucher for recurring payments you make monthly.

- a) True
- b) False

?

Prior to posting a voucher, you must select the Print option on the form. This allows you to print and review the A/P Voucher Posting report, which lists all vouchers and adjustments that will be posted.

- a) True
- b) False

Lesson 4: Paying invoices

?

Which of the following payment types are available for check printing and posting?

- a) STD Check
- b) Wire
- c) Manual Check
- d) STD Draft
- e) EFT

?

The distribution portion of a payment displays what a check is being written for; vouchers, commissions, or non-accounts payable payments. This is sometimes referred to as which of the following?

- a) Check stub
- b) Payment header
- c) Check
- d) Credit to cash

?

If a payment is deleted on the A/P Payments form, a check will still print.

- a) True
- b) False

?

To make a prepayment (deposit) to a vendor, what option should be selected from the Type drop-down list on the Payment Distributions form?

- a) Voucher
- b) Non-A/P
- c) Commission
- d) Open

?

Which of the following are optional steps in the check printing/posting process?

- a) Printing the preliminary check register

- b) Printing accounts payable checks
- c) Voiding checks
- d) Printing accounts payable check stubs
- e) Printing a final check register and post checks

You use the Void A/P Posted Payments utility to void previously posted checks. This utility also reverses bank reconciliations and writes reversing accounts payable journal entries.

- a) True
- b) False

A/P Payment generation is the only method of processing payments?

- a) True
- b) False

Lesson 5: Using Return To Debit

What report can be used to inform a vendor that you are returning an item and includes the credit memo amounts applied to the original vendor invoices and purchase orders?

- a) Change Order Report
- b) Purchase Requirements Report
- c) Vendor Voucher/Debit Memo Report
- d) Vouchers Payable

Lesson 7: Setting up accounts payable and supporting files overview

If you enter a prefix of VN in the Vendor Prefix field on the General tab of the Accounts Payable Parameters form, how will the default vendor numbers be generated?

- a) 00001VN, 00002VN, 00003VN, and so on
- b) VN00001, VN00002, VN00003, and so on
- c) 0000VN1, 0000VN2, 0000VN3, and so on
- d) VN1, VN2, VN3, and so on

?

Which of the following billing term items are used to calculate?

- a) Discount Percent
- b) Due Days
- c) Cutoff Day
- d) Discount Days

?

Which temporary liability account is used to track purchase order quantities and amounts received, but not yet vouchered?

- a) Freight Payable
- b) Accounts Payable
- c) Vouchers Payable
- d) Brokerage Payable

?

On which form do you enable the voucher authorization feature?

- a) Product Codes
- b) Vendors
- c) Purchasing Parameters
- d) Accounts Payable Parameters

Course review

?

The _____ must contain all accounts payable-related account numbers before transaction distributions and postings can occur.

- a) Accounts payable parameters
- b) Chart of Accounts
- c) Billing terms
- d) Bank codes

?

When a vendor is on a payment hold, all transactions are prohibited.

- a) True
- b) False

?

If a purchase order was not generated for items/services received from a vendor, the voucher can be manually entered on which one of the following forms?

- a) A/P Vouchers and Adjustments
- b) Generate A/P Transactions
- c) Voucher Adjustment Distribution
- d) Recurring Vouchers

?

You use Distribution Generation when you want to automatically distribute a voucher. Which two of the following forms does the system use to assign the G/L account number for the distribution.

- a) Accounts Payable Parameters
- b) Distribution
- c) A/P Voucher Posting
- d) Vendors

Appendix B: EFT setup and bank statement import

Electronic funds transfer (EFT) is a common way to process automatic transfer of funds from a company's bank account to its vendors or employees. SyteLine supports various output file formats for submission to third-party EFT transmission systems.

Setting up Electronic Funds Transfer (EFT) Payments

Electronic funds transfer (EFT) is a common way to process automatic transfer of funds from a company's bank account to its vendors or employees. SyteLine supports various output file formats for submission to third-party EFT transmission systems.

Note: Be aware that check numbers are limited to 7 digits for vendor/employee payments with an EFT Payment Type where the EFT Format set to ALLEFT. You can manually set the check number on the A/P Payments form.

Chart of Accounts form - set up any new G/L accounts and unit codes that you will use for automatic A/P payments.

General Parameters form - specify your company's Bank Authority Party ID, if your company does business in countries that require it.

Countries form - you should already have set up country codes that map to ISO country codes. You must also set up the Bank Transit Number Mask in this form for each country where you will transmit electronic banking data. See the help for this field for some examples of the masking format.

Bank Reconciliations form - specify information about the banks that you will use for EFT transactions. This includes your company's bank as well as vendor and employee banks.

- Create a bank code and specify the appropriate information to describe the banks where your company has accounts. This can include your company's IBAN number and the currency in which the bank deals, your company's BIC number or Bank Authority Party ID, as appropriate.
Your company might have accounts at banks in different regions or in different currencies, to simplify dealing with vendors and employees in those regions or currencies.
- Create a bank code and specify information to describe each of the banks where your vendors and employees have accounts. Specify the currency in which each bank deals. For vendor's banks, also specify the appropriate EFT information, which can include the IBAN number, BIC number or Bank Authority Party ID, as appropriate.
- If your vendors use an Optical Character Recognition (OCR) number in banking, select the appropriate settings in the OCR Reference Control fields.

Bank Addresses form - specify at least the bank number and the branch code for each bank.

A/P EFT Posting form - specify the format.

Use the **Bank File Format** and **Bank Code Bank File Format** forms to set up the EFT parameters for this information:

- EFT format: ALLEFT, BBMEFT, ABAFILE, NACHA PPD, NACHA CCD, SEPA, CPA, CNAB, or ZENGIN File (JBA).
- Bank code to use for EFT transactions
- Logical folder where the EFT output files will be stored
- User name and user number, which is needed only for the ABAFILE format
- Destination ID and Origination ID, which are needed only for the NACHA and CPA formats
- Company ID, which is needed only for the NACHA format

- Whether to use the default account. This is needed only for the CPA format.
- Registration number, which is needed only for the CNAB format

After EFT processing has begun, this tab also shows the last date an EFT file was created, and the name (number) of that file.

In the **Remittance Advice** area to the right of the EFT parameters, indicate whether you want to print remittance advice after posting EFT transactions.

Vendors or Multi-Site Vendors form set up EFT information for the individual vendors.

This information includes the Bank Code for your company's bank account that you will use for automatic payments; the Payment Type, and the Vendor Bank code that describes the vendor's bank account that will receive payments from your bank account.

If the vendor's default payment type is EFT, specify this information, depending on the EFT format that you use:

- For ABAFILE, specify the bank account, the bank's EFT (sort) number, and the account name.
- For ALLEFT and BBMEFT, specify the bank account and the bank's EFT (sort) number.
- For CNAB, specify the transit reference, EFT (sort) number, and the account name.
- For CPA, specify the bank account, the transit reference, EFT (sort) number, and the account name.
- For NACHA PPD and NACHA CCD, specify the bank name, transit reference, and bank account.
- For SEPA, specify the international bank account number (IBAN).

For vendors in countries where this is a requirement, specify the Bank Authority Party ID.

If a Remit To Vendor is set for the vendor, then EFT information must also be set up for the Remit To Vendor.

Employees form, in the Direct Deposit section, specify appropriate banking information for employees who can receive automatic payments. The information that you must supply depends on the requirements of the banking authority.

Accounts Payable Parameters form

- **General** tab – Select the check boxes for the types of payments that you will be printing Remittance Advice for.
- **EFT** tab - specify EFT settings
 - Format - select the format to use when creating Electronic Funds Transfer files for submission to a third-party EFT transmission system
 - Bank - select the bank you will use to make EFT payments.

Posting Electronic Funds Transfer transactions

Ensure that users who perform the Final Register and Post, or who print the Remittance Advice, have permission to write to the output directory for the EFT files. If you run either process successfully, and no file is created, check the permissions on the directory.

To post electronic funds transfer (EFT) transactions and to create the EFT output file:

1. Before posting, select the A/P EFT Posting Report option on the A/P EFT Posting form.
This option produces a list of the EFT payments that will be posted. The grid at the bottom of the form also displays the list of items that will be posted. Review these lists.
2. After printing the report, to begin the posting process, select the Final Register and Post option.

This step also creates the EFT payments output file, using information from fields on the Bank File Format form. The system:

- Writes the file in the format specified by the EFT Format field.
- Writes payment records to this file, which has an incrementally numbered filename (continuing from the number in the Last EFT File field).
- Places the file in the logical folder specified in the Logical Folder field.

Note: Click the Files button on the A/P EFT Posting form to view or download the output file from the logical folder.

- Creates the EFT Output File Report. This report logs all output EFT records.
3. Optionally, select the Print Remittance Advice option and then click Process to print remittance advice,

Note: If the EFT option for Remittance Advice is selected on the Accounts Payable Parameters form, you must also select Print Remittance Advice.

To have the remittance advice statement processed for print, fax, or email on a vendor-by-vendor basis, also select the Use Profile check box.

When you post an EFT payment and distribution, a Bank Reconciliations record stores the payment. The system marks the record as Not Voided.

EFT Output Files

About EFT Output Filenames

If the EFT format is ALLEFT or BBMEFT, the filename is incremented each time the post process is run, so the file is never overwritten.

If the EFT format is ABAFILE, CNAB, CPA, NACHA or SEPA, the filename format is EFT + day + month + year + hour + minutes + seconds + the file extension (.aba, .dat, .txt or .xml), so the file is never overwritten.

Format

The format of the EFT output file depends on the value of the EFT Format field on the Accounts Payable Parameters form.

EFT bank statement import overview

1. The electronic bank statement import allows the user to import a file from a bank of transactions that update the MAPICS Extended Systems database. The transactions that are supported are:
 - Reconcile checks.
 - Reconcile BACS transactions.
 - Create cash receipts for checks that were deposited directly to the bank (lock box).
 - Create cash disbursements for direct debits.
2. The user enters the path to the bank's file. The application determines the nature and parameters of the transaction based upon the data in the flat file. Batches are created for the transactions supplied by the bank. The transactions can then be reviewed and posted by clicking on the appropriate "Process" button.
